Academic Free License v2.1

This Academic Free License (the "License") applies to any original work of authorship (the "Original Work") whose owner (the "Licensor") has placed the following notice immediately following the copyright notice for the Original Work

Licensed under the Academic Free License version 2.1

1) Grant of Copyright License. Licensor hereby grants You a world-wide, royalty-free, non-exclusive, perpetual, sublicenseable license to do the following:

- a) to reproduce the Original Work in copies;
- b) to prepare derivative works ("Derivative Works") based upon the Original Work;
- c) to distribute copies of the Original Work and Derivative Works to the public;
- d) to perform the Original Work publicly; and
- e) to display the Original Work publicly.

2) Grant of Patent License. Licensor hereby grants You a world-wide, royalty-free, non-exclusive, perpetual, sublicenseable license, under patent claims owned or controlled by the Licensor that are embodied in the Original Work as furnished by the Licensor, to make, use, sell and offer for sale the Original Work and Derivative Works.

3) Grant of Source Code License. The term "Source Code" means the preferred form of the Original Work for making modifications to it and all available documentation describing how to modify the Original Work. Licensor hereby agrees to provide a machine-readable copy of the Source Code of the Original Work along with each copy of the Original Work that Licensor distributes. Licensor reserves the right to satisfy this obligation by placing a machine-readable copy of the Source Code in an information repository reasonably calculated to permit inexpensive and convenient access by You for as long as

Licensors continue to distribute the Original Work, and by publishing the address of that information repository in a notice immediately following the copyright notice that applies to the Original Work.

4) Exclusions From License Grant. Neither the names of Licensors, nor the names of any contributors to the Original Work, nor any of their trademarks or service marks, may be used to endorse or promote products derived from this Original Work without express prior written permission of the Licensor. Nothing in this License shall be deemed to grant any rights to trademarks, copyrights, patents, trade secrets or any other intellectual property of Licensors except as expressly stated herein. No patent license is granted to make, use, sell or offer to sell embodiments of any patent claims other than the licensed claims defined in Section 2. No right is granted to the trademarks of Licensors even if such marks are included in the Original Work. Nothing in this License shall be interpreted to prohibit Licensors from licensing under different terms from this License any Original Work that Licensors otherwise would have a right to license.

5) This section intentionally omitted.

6) Attribution Rights. You must retain, in the Source Code of any Derivative Works that You create, all copyright, patent or trademark notices from the Source Code of the Original Work, as well as any notices of licensing and any descriptive text identified therein as an "Attribution Notice." You must cause the Source Code for any Derivative Works that You create to carry a prominent Attribution Notice reasonably calculated to inform recipients that You have modified the Original Work.

7) Warranty of Provenance and Disclaimer of Warranty. Licensors warrants that the copyright in and to the Original Work and the patent rights granted herein by Licensors are owned by the Licensors or are sublicensed to You under the terms of this License with the permission of the contributor(s) of those copyrights and patent rights. Except as expressly stated in the immediately preceding sentence, the Original Work is provided under this License on an "AS IS" BASIS and WITHOUT WARRANTY, either express or implied, including, without limitation, the warranties of NON-INFRINGEMENT, MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY OF THE ORIGINAL WORK IS WITH YOU. This DISCLAIMER OF WARRANTY constitutes an essential part of this License. No license to Original Work is granted hereunder except under this disclaimer.

8) Limitation of Liability. Under no circumstances and under no legal theory, whether in tort (including negligence), contract, or otherwise, shall the Licensors be liable to any person for any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or the use of the Original Work including, without limitation, damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses. This limitation of liability shall not apply to liability for death or personal injury resulting from Licensors' negligence to the extent applicable law prohibits such limitation. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so this exclusion and limitation may not apply to You.

9) Acceptance and Termination. If You distribute copies of the Original Work or a Derivative Work, You must make a reasonable effort under the circumstances to obtain the express assent of recipients to the terms of this License. Nothing else but this License (or another written agreement between Licensors and

You) grants You permission to create Derivative Works based upon the Original Work or to exercise any of the rights granted in Section 1 herein, and any attempt to do so except under the terms of this License (or another written agreement between Licensor and You) is expressly prohibited by U.S. copyright law, the equivalent laws of other countries, and by international treaty. Therefore, by exercising any of the rights granted to You in Section 1 herein, You indicate Your acceptance of this License and all of its terms and conditions.

10) Termination for Patent Action. This License shall terminate automatically and You may no longer exercise any of the rights granted to You by this License as of the date You commence an action, including a cross-claim or counterclaim, against Licensor or any licensee alleging that the Original Work infringes a patent. This termination provision shall not apply for an action alleging patent infringement by combinations of the Original Work with other software or hardware.

11) Jurisdiction, Venue and Governing Law. Any action or suit relating to this License may be brought only in the courts of a jurisdiction wherein the Licensor resides or in which Licensor conducts its primary business, and under the laws of that jurisdiction excluding its conflict-of-law provisions. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any use of the Original Work outside the scope of this License or after its termination shall be subject to the requirements and penalties of the U.S. Copyright Act, 17 U.S.C. § 101 et seq., the equivalent laws of other countries, and international treaty. This section shall survive the termination of this License.

12) Attorneys Fees. In any action to enforce the terms of this License or seeking damages relating thereto, the prevailing party shall be entitled to recover its costs and expenses, including, without limitation, reasonable attorneys' fees and costs incurred in connection with such action, including any appeal of such action. This section shall survive the termination of this License.

13) Miscellaneous. This License represents the complete agreement concerning the subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable.

14) Definition of "You" in This License. "You" throughout this License, whether in upper or lower case, means an individual or a legal entity exercising rights under, and complying with all of the terms of, this License. For legal entities, "You" includes any entity that controls, is controlled by, or is under common control with you. For purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

15) Right to Use. You may use the Original Work in all ways not otherwise restricted or conditioned by this License or by law, and Licensor promises not to interfere with or be responsible for such uses by You. This license is Copyright (C) 2003-2004 Lawrence E. Rosen. All rights reserved. Permission is hereby granted to copy and distribute this license without modification. This license may not be modified without the express written permission of its copyright owner.

# Usage: $progname [OPTION]... [MODE-ARG]...
#
# Provide generalized library-building support services.
#
#       --config                show all configuration variables
#       --debug                 enable verbose shell tracing
#   -n, --dry-run               display commands without modifying any
files
#       --features              display basic configuration information
and exit
#       --mode=MODE             use operation mode MODE
#       --preserve-dup-deps     don't remove duplicate dependency
libraries
#       --quiet, --silent       don't print informational messages
#       --no-quiet, --no-silent
#                               print informational messages (default)
#       --no-warn               don't display warning messages
#       --tag=TAG               use configuration variables from tag TAG
#   -v, --verbose               print more informational messages than
default
#       --no-verbose            don't print the extra informational
messages
#       --version               print version information
#   -h, --help, --help-all    print short, long, or detailed help
message
#
# MODE must be one of the following:
#
```

```

#       clean                remove files from the build directory
#       compile              compile a source file into a libtool
object
#       execute              automatically set library path, then run
a program
#       finish               complete the installation of libtool
libraries
#       install              install libraries or executables
#       link                 create a library or an executable
#       uninstall            remove libraries from an installed
directory
#
# MODE-ARGS vary depending on the MODE.  When passed as first option,
# `--mode=MODE' may be abbreviated as `MODE' or a unique abbreviation
of that.
# Try `$progname --help --mode=MODE' for a more detailed description
of MODE.
#
# When reporting a bug, please describe a test case to reproduce it
and
# include the following information:
#
#       host-triplet:       $host
#       shell:              $SHELL
#       compiler:           $LTCC
#       compiler flags:     $LTCFLAGS
#       linker:             $LD (gnu? $with_gnu_ld)
#       $progname:         (GNU libtool) 2.4.2
#       automake:           $automake_version
#       autoconf:          $autoconf_version

#####
# $build to $host PATH CONVERSION FUNCTIONS #
#####
# invoked via `sto_host_path_cmd ARG'
#
# In each case, ARG is the path to be converted from $build to $host
format.
# The result will be available in $func_to_host_path_result.
#
# Path separators are also converted from $build format to $host
format.  If
# ARG begins or ends with a path separator character, it is preserved
(but
# converted to $host format) on output.
#
# All path conversion functions are named using the following
convention:
#   file name conversion function      : func_convert_file_X_to_Y ()
#   path conversion function          : func_convert_path_X_to_Y ()
# where, for any given $build/$host combination the 'X_to_Y' value is
the
# same.  If conversion functions are added for new $build/$host
combinations,
# the two new functions must follow this pattern, or
func_init_to_host_path_cmd
# will break.

# func_init_to_host_path_cmd

  clean)
    $ECHO \
"Usage: $progname [OPTION]... --mode=clean RM [RM-OPTION]... FILE...

Remove files from the build directory.

RM is the name of the program to use to delete files associated with
each FILE
(typically \"/bin/rm').  RM-OPTIONS are options (such as \'-f') to be
passed
to RM.

If FILE is a libtool library, object or program, all the files
associated
with it are deleted. Otherwise, only FILE itself is deleted using RM."
    ;;

  compile)
    $ECHO \
"Usage: $progname [OPTION]... --mode=compile COMPILE-COMMAND...
SOURCEFILE

Compile a source file into a libtool library object.

This mode accepts the following additional options:

  -o OUTPUT-FILE      set the output file name to OUTPUT-FILE
  -no-suppress        do not suppress compiler output for multiple
passes
  -prefer-pic         try to build PIC objects only
  -prefer-non-pic     try to build non-PIC objects only
  -shared             do not build a \'.o' file suitable for static
linking
  -static             only build a \'.o' file suitable for static
linking
  -Wc,FLAG           pass FLAG directly to the compiler

COMPILE-COMMAND is a command to be used in creating a \'standard'
object file
from the given SOURCEFILE.

The output file name is determined by removing the directory component
from
SOURCEFILE, then substituting the C source code suffix \'.c' with the

```

```
library object suffix, \`.lo'."
```

```

```

```
execute)
```

```
$ECHO \
```

```
"Usage: $progname [OPTION]... --mode=execute COMMAND [ARGS]..."
```

Automatically set library path, then run a program.

This mode accepts the following additional options:

```
-dlopen FILE      add the directory containing FILE to the library  
path
```

This mode sets the library path environment variable according to \`-dlopen' flags.

If any of the ARGS are libtool executable wrappers, then they are translated into their corresponding uninstalled binary, and any of their required library directories are added to the library path.

Then, COMMAND is executed, with ARGS as arguments."

```
;;
```

```
finish)
```

```
$ECHO \
```

```
"Usage: $progname [OPTION]... --mode=finish [LIBDIR]..."
```

Complete the installation of libtool libraries.

Each LIBDIR is a directory that contains libtool libraries.

The commands that this mode executes may require superuser privileges.

Use

the \`--dry-run' option if you just want to see what would be executed."

```
;;
```

```
install)
```

```
$ECHO \
```

```

Install executables or libraries.

INSTALL-COMMAND is the installation command. The first component should be either the \`install' or \`cp' program.

The following components of INSTALL-COMMAND are treated specially:

`-inst-prefix-dir PREFIX-DIR` Use PREFIX-DIR as a staging area for installation

The rest of the components are interpreted as arguments to that command (only BSD-compatible install options are recognized)."

`;;`

link)

`$ECHO \`

"Usage: \$progname [OPTION]... --mode=link LINK-COMMAND..."

Link object files or libraries together to form another library, or to create an executable program.

LINK-COMMAND is a command using the C compiler that you would use to create a program from several object files.

The following components of LINK-COMMAND are treated specially:

<code>-all-static</code>	do not do any dynamic linking at all
<code>-avoid-version</code>	do not add a version suffix if possible
<code>-bindir BINDIR</code>	specify path to binaries directory (for systems where
	libraries must be found in the PATH setting at
	runtime)
<code>-dlopen FILE</code>	<code>\`-dlpreopen'</code> FILE if it cannot be dlopened at
	runtime
<code>-dlpreopen FILE</code>	link in FILE and add its symbols to
<code>lt_preloaded_symbols</code>	
<code>-export-dynamic</code>	allow symbols from OUTPUT-FILE to be resolved with
	<code>dlsym(3)</code>
<code>-export-symbols SYMFILE</code>	
	try to export only the symbols listed in SYMFILE
<code>-export-symbols-regex REGEX</code>	
	try to export only the symbols matching REGEX
<code>-LLIBDIR</code>	search LIBDIR for required installed libraries
<code>-lname</code>	OUTPUT-FILE requires the installed library libNAME
<code>-module</code>	build a library that can dlopened
<code>-no-fast-install</code>	disable the fast-install mode
<code>-no-install</code>	link a not-installable executable
<code>-no-undefined</code>	declare that a library does not refer to external
	symbols
<code>-o OUTPUT-FILE</code>	create OUTPUT-FILE from the specified objects
<code>-objectlist FILE</code>	Use a list of object files found in FILE to
	specify objects
<code>-precious-files-regex REGEX</code>	
	don't remove output files matching REGEX
<code>-release RELEASE</code>	specify package release information

-rpath LIBDIR the created library will eventually be installed
 in LIBDIR
 -R[]LIBDIR add LIBDIR to the runtime path of programs and
 libraries
 -shared only do dynamic linking of libtool libraries
 -shrext SUFFIX override the standard shared library file
 extension
 -static do not do any dynamic linking of uninstalled
 libtool libraries
 -static-libtool-libs do not do any dynamic linking of libtool libraries
 -version-info CURRENT[:REVISION[:AGE]]
 specify library version info [each variable
 defaults to 0]
 -weak LIBNAME declare that the target provides the LIBNAME
 interface
 -Wc,FLAG pass linker-specific FLAG directly to the compiler
 -Xcompiler FLAG pass linker-specific FLAG directly to the compiler
 -Wl,FLAG pass linker-specific FLAG directly to the linker
 -Xlinker FLAG pass linker-specific FLAG directly to the linker
 -XCc linker FLAG pass link-specific FLAG to the compiler driver
 (CC)

All other options (arguments beginning with \`-') are ignored.

Every other argument is treated as a filename. Files ending in \`.la'
 are
 treated as uninstalled libtool libraries, other files are standard or
 library
 object files.

If the OUTPUT-FILE ends in \`.la', then a libtool library is created,
 only library objects (\`.lo' files) may be specified, and \`-rpath' is
 required, except when creating a convenience library.

If OUTPUT-FILE ends in \`.a' or \`.lib', then a standard library is
 created
 using \`.ar' and \`.ranlib', or on Windows using \`.lib'.

If OUTPUT-FILE ends in \`.lo' or \`\${objext}', then a reloadable
 object file
 is created, otherwise an executable program is created."

```

    ;;

    uninstall)
      $ECHO \
"Usage: $progname [OPTION]... --mode=uninstall RM [RM-OPTION]...
FILE..."
  
```

Remove libraries from an installation directory.

RM is the name of the program to use to delete files associated with each FILE (typically `\`/bin/rm'`). RM-OPTIONS are options (such as `\`-f'`) to be passed to RM.

If FILE is a libtool library, all the files associated with it are deleted.

Otherwise, only FILE itself is deleted using RM."

    }) ? "cmd.exe" : "command.com").
    Instead it simply concatenates the arguments, separated by ' ', and
calls
    CreateProcess(). We must quote the arguments since Win32
CreateProcess()
    interprets characters like ' ', '\t', '\\', '"' (but not '<' and
'>') in a
    special way:
    - Space and tab are interpreted as delimiters. They are not treated
as
    delimiters if they are surrounded by double quotes: "...".
    - Unescaped double quotes are removed from the input. Their only
effect is
    that within double quotes, space and tab are treated like normal
characters.
    - Backslashes not followed by double quotes are not special.
    - But 2*n+1 backslashes followed by a double quote become
n backslashes followed by a double quote (n >= 0):
    \" -> "
    \\\" -> \"
    \\\\" -> \\\"
    \\\\\" -> \\\\"

# The TAGs below are defined such that we never get into a situation
# in which we disable both kinds of libraries.  Given conflicting
# choices, we go for a static library, that is the most portable,
# since we can't tell whether shared libraries were disabled because
# the user asked for that or because the platform doesn't support
# them.  This is particularly important on AIX, because we don't
# support having both static and shared libraries enabled at the same
# time on that platform, so we default to a shared-only configuration.
# If a disable-shared tag is given, we'll fallback to a static-only
# configuration.  But we'll never go from static-only to shared-only.

"Usage: $progname [OPTION]... --mode=compile COMPILE-COMMAND...
SOURCEFILE

Compile a source file into a libtool library object.

This mode accepts the following additional options:

    -o OUTPUT-FILE      set the output file name to OUTPUT-FILE
    -no-suppress        do not suppress compiler output for multiple
passes
    -prefer-pic         try to build PIC objects only
    -prefer-non-pic     try to build non-PIC objects only
    -shared             do not build a `'.o' file suitable for static
linking
    -static             only build a `'.o' file suitable for static
linking
    -Wc,FLAG           pass FLAG directly to the compiler

COMPILE-COMMAND is a command to be used in creating a `standard'
object file
from the given SOURCEFILE.

```

The output file name is determined by removing the directory component from SOURCEFILE, then substituting the C source code suffix '\`c' with the library object suffix, '\`lo'."

```
;;  
  
execute)  
$ECHO \  
"Usage: $progname [OPTION]... --mode=execute COMMAND [ARGS]...
```

Automatically set library path, then run a program.

This mode accepts the following additional options:

```
-dlopen FILE      add the directory containing FILE to the library  
path
```

This mode sets the library path environment variable according to '\`-dlopen' flags.

If any of the ARGS are libtool executable wrappers, then they are translated into their corresponding uninstalled binary, and any of their required library directories are added to the library path.

Then, COMMAND is executed, with ARGS as arguments."

```
;;  
  
finish)  
$ECHO \  
"Usage: $progname [OPTION]... --mode=finish [LIBDIR]...
```

Complete the installation of libtool libraries.

Each LIBDIR is a directory that contains libtool libraries.

The commands that this mode executes may require superuser privileges. Use the '\`--dry-run' option if you just want to see what would be executed."

```
;;  
  
install)  
$ECHO \  
"Usage: $progname [OPTION]... --mode=install INSTALL-COMMAND...
```

Install executables or libraries.

INSTALL-COMMAND is the installation command. The first component should be either the `'install'` or `'cp'` program.

The following components of INSTALL-COMMAND are treated specially:

`-inst-prefix-dir PREFIX-DIR` Use PREFIX-DIR as a staging area for installation

The rest of the components are interpreted as arguments to that command (only BSD-compatible install options are recognized)."

`;;`

link)

`$ECHO \`

"Usage: \$progname [OPTION]... --mode=link LINK-COMMAND...

Link object files or libraries together to form another library, or to create an executable program.

LINK-COMMAND is a command using the C compiler that you would use to create a program from several object files.

The following components of LINK-COMMAND are treated specially:

`-all-static` do not do any dynamic linking at all
`-avoid-version` do not add a version suffix if possible
`-bindir BINDIR` specify path to binaries directory (for systems where libraries must be found in the PATH setting at runtime)
`-dlopen FILE` `'-dlpreopen'` FILE if it cannot be dlopened at runtime
`-dlpreopen FILE` link in FILE and add its symbols to `lt_preloaded_symbols`
`-export-dynamic` allow symbols from OUTPUT-FILE to be resolved with `dlsym(3)`
`-export-symbols SYMFILE` try to export only the symbols listed in SYMFILE
`-export-symbols-regex REGEX` try to export only the symbols matching REGEX
`-LLIBDIR` search LIBDIR for required installed libraries
`-lname` OUTPUT-FILE requires the installed library libNAME
`-module` build a library that can dlopened
`-no-fast-install` disable the fast-install mode
`-no-install` link a not-installable executable
`-no-undefined` declare that a library does not refer to external symbols
`-o OUTPUT-FILE` create OUTPUT-FILE from the specified objects

```

-objectlist FILE  Use a list of object files found in FILE to
specify objects
-precious-files-regex REGEX
                        don't remove output files matching REGEX
-release RELEASE  specify package release information
-rpath LIBDIR      the created library will eventually be installed
in LIBDIR
-R[ ]LIBDIR        add LIBDIR to the runtime path of programs and
libraries
-shared            only do dynamic linking of libtool libraries
-shrext SUFFIX     override the standard shared library file
extension
-static            do not do any dynamic linking of uninstalled
libtool libraries
-static-libtool-libs
                        do not do any dynamic linking of libtool libraries
-version-info CURRENT[:REVISION[:AGE]]
                        specify library version info [each variable
defaults to 0]
-weak LIBNAME      declare that the target provides the LIBNAME
interface
-Wc,FLAG           pass linker-specific FLAG directly to the compiler
-Xcompiler FLAG    pass linker-specific FLAG directly to the compiler
-Wl,FLAG           pass linker-specific FLAG directly to the linker
-Xlinker FLAG      pass linker-specific FLAG directly to the linker
-XCc linker FLAG   pass link-specific FLAG to the compiler driver
(CC)

```

All other options (arguments beginning with \`-') are ignored.

Every other argument is treated as a filename. Files ending in \`.la' are treated as uninstalled libtool libraries, other files are standard or library object files.

If the OUTPUT-FILE ends in \`.la', then a libtool library is created, only library objects (\`.lo' files) may be specified, and \`-rpath' is required, except when creating a convenience library.

If OUTPUT-FILE ends in \`.a' or \`.lib', then a standard library is created using \`ar' and \`ranlib', or on Windows using \`.lib'.

If OUTPUT-FILE ends in \`.lo' or \`\${objext}', then a reloadable object file is created, otherwise an executable program is created."

```

/* Prepares an argument vector before calling spawn().
   Note that spawn() does not by itself call the command interpreter
   (getenv ("COMSPEC") != NULL ? getenv ("COMSPEC") :
    ({ OSVERSIONINFO v; v.dwOSVersionInfoSize =
sizeof(OSVERSIONINFO);
    GetVersionEx(&v);
    v.dwPlatformId == VER_PLATFORM_WIN32_NT;
    }) ? "cmd.exe" : "command.com").
   Instead it simply concatenates the arguments, separated by ' ', and
   calls
   CreateProcess(). We must quote the arguments since Win32
   CreateProcess()
   interprets characters like ' ', '\t', '\\', '"' (but not '<' and
   '>') in a
   special way:
   - Space and tab are interpreted as delimiters. They are not treated
   as
   delimiters if they are surrounded by double quotes: "...".
   - Unescaped double quotes are removed from the input. Their only
   effect is
   that within double quotes, space and tab are treated like normal
   characters.
   - Backslashes not followed by double quotes are not special.
   - But 2*n+1 backslashes followed by a double quote become
   n backslashes followed by a double quote (n >= 0):
    \" -> "
    \\\" -> \"
    \\\\" -> \\\"

# The TAGs below are defined such that we never get into a situation
# in which we disable both kinds of libraries.  Given conflicting
# choices, we go for a static library, that is the most portable,
# since we can't tell whether shared libraries were disabled because
# the user asked for that or because the platform doesn't support
# them.  This is particularly important on AIX, because we don't
# support having both static and shared libraries enabled at the same
# time on that platform, so we default to a shared-only configuration.
# If a disable-shared tag is given, we'll fallback to a static-only
# configuration.  But we'll never go from static-only to shared-only.

<a name="idp744992"></a>Introduction</h2></div></div></div>
<p>D-Bus is a message bus system, a simple way for applications
to talk to one another.</p>
<p>D-Bus supplies both a system daemon (for events such as "new
hardware device added" or "printer queue changed") and a
per-user-login-session daemon (for general IPC needs among user
applications). Also, the message bus is built on top of a general
one-to-one message passing framework, which can be used by any two
apps to communicate directly (without going through the message
bus daemon). Currently the communicating applications are on one
computer, but TCP/IP option is available and remote support
planned.</p>
<p>The D-Bus API isn't finished yet, and the design is by no
means set in stone. One of our main goals is for lots of projects
to use it, so if you wouldn't use it, by all means mail us and say
why - design, licensing, indentation style, we would rather know
than not know.</p>
<p>D-Bus' only <span class="emphasis"><em>required</em></span>
dependency is an
XML parser (either
libxml or expat). D-Bus includes many language bindings to the
D-Bus system, if you want to build those. The list of projects
using D-Bus is growing and they provide a wealth of examples of
using the various APIs to learn from.</p>
<p>Trying out D-Bus in sample applications is encouraged - we
want to get it widely used and tested. It should be working
pretty well these days, and when it isn't bug reports are very
welcome.</p>
<p>For more information on D-Bus, see

```

<a name="api-overview"></a>API for using D-BUS with
GLib</h2></div></div></div>
<p>libdbus proper is a low-level API, these GLib bindings wrap
libdbus with a much higher-level approach. The higher level
approach is possible because GLib defines a main loop, an
object/type system, and an out-of-memory handling policy (it exits

```

```

    the program). See <a class="ulink" href="http://www.gtk.org"
target="_top">http://www.gtk.org</a> for GLib
    information.</p>
<p>To manipulate remote objects, use DBusGProxy. </p>

CVE-2013-0292: dbus-gproxy: Verify sender of NameOwnerChanged signals to be o.f.DBus

Anyone can hop on the bus and emit a signal whose interface is o.f.DBus; it's expected at the moments that clients (and notably DBus libraries) check the sender.

This could previously be used to trick a system service using dbus-glib into thinking a malicious signal came from a privileged source, by claiming that ownership of the privileged source's well-known name had changed from the privileged source's real unique name to the attacker's

unique name.

[altered to be NULL-safe so it won't crash on peer connections - smcv]

Author: Simon McVittie <simon.mcvittie@collabora.co.uk>

Date: 2012-04-16 12:11:38 +0100

Fix two crashes when `dbus_g_proxy_new_for_peer` is used on a bus

The first part of the bug is that when `NameOwnerChanged` is received

with

a `dbus_g_proxy_new_for_peer` (which has no name) alive, checking whether it was affected by the `NameOwnerChanged` caused a NULL dereference and segfault.

The second part of the bug is that if the last proxy in existence is

for a peer, when it was unregistered there would be no `owner_match_rules`, causing a crash.

Both are exercised in the new test added here.

Remove tests in test-dbus-glib which basically just test error mapping

Also remove the methods on MyObject that only existed to support these tests; ThrowError is now versatile enough to implement them all.

Leave ThrowUnregisteredError as it is, since it violates GError expectations (see GNOME#660371), but stop using it in test-dbus-glib - it's enough to use it in test-error-mapping.

MyObject: make ThrowError, AsyncThrowError throw a caller-
specified
error

This can be used to test arbitrary errors, but only in-process; in
tests with the service out-of-process, like test-dbus-glib,
the initial
error (matching the error they previously threw) will always be
used.

This obsoletes ThrowErrorUnderscore, ThrowErrorMultiWord and
ThrowNotSupported, but not ThrowUnregisteredError due to some
strange
assumptions about the validity of GError domains in that method
(see GNOME#660731).

DBusGProxy: be more pedantic about boolean returns

Returning false doesn't strictly imply that the error is set; if you're being pedantic enough, it's really a tri-state where TRUE indicates success, FALSE indicates failure, and calling the function incorrectly results in undefined behaviour (currently a critical warning and returning FALSE).

object_registration_message: handle remote caller errors better

If the remote process sends us a wrong message, that's its fault, not ours; we should send back a comprehensible D-Bus error, and not spam to stderr.

Previously, in each of these cases libdbus would have sent back NoReply, because we declined to handle the method call.

One case that's still wrong is passing extra arguments to Get, GetAll or Set, like so:

```
Get("com.example.Iface", "MyProperty", "extra")
Set("com.example.Iface", "MyProperty", Variant("foo"), "extra")
GetAll("com.example.Iface", "extra")
```

dbus-glib has historically warned, ignored the extra argument(s) and sent back a reply as if they hadn't been there, whereas a stricter implementation (like telepathy-glib's TpDBusPropertiesMixin) would have sent back an error reply and done nothing.

invoke_object_method: if marshalling an out argument fails,
discard
message

We shouldn't report this as OOM, because it probably wasn't (it's
much
more likely to be programming error); we should also continue
through the
arguments, so that we don't leak them.

By abandoning the message as soon as we detect a programming
error,
we can use reply == NULL as an indicator of whether to keep
appending.

DBusGProxy: deal with errors in DBUS_G_VALUE_ARRAY_COLLECT_ALL

G_VALUE_COLLECT can fail (admittedly, it's a programming error if it does). Previously, we leaked the resulting g_malloc'd string; now we emit a critical warning, free it, and abort the call.

Based on patches from Kimmo Härmäläinen and Christian Dywan in Maemo's dbus-glib.

```
DBusGProxy: cope gracefully with call_id == 0
```

```
As well as happening on a programming error or OOM (which both  
provoke  
critical warnings), dbus_g_proxy_begin_call_internal() can  
legitimately  
fail if we got disconnected from D-Bus (so can't send any more),  
but are  
still working through our backlog of incoming messages (so we  
haven't  
got round to the Disconnected message yet, so the DBusGProxy  
hasn't  
emitted ::destroy).
```

```
fd.o #12675 fixed dbus_g_proxy_call(), but  
dbus_g_proxy_call_with_timeout()  
and the asynchronous API still need similar treatment.
```

registrations test: fix race condition in adding match rules

If you don't block waiting for the reply to AddMatch, and you're using two connections to the bus, then messages sent from connection 2 might not be matched by connection 1, because they arrive before the AddMatch call from connection 1. This manifests itself as the /registrations/twice test *sometimes* failing (dependent on timing).

Only tests with two parallel bus connections need this, but to be safe, I've added it throughout this test.

Log error message from failed object registration

See https://bugzilla.redhat.com/show_bug.cgi?id=708686 for a case of this; it would be extremely helpful to figure out what the error actually was since it appears not to be a double-registration or other such issues after inspection of nm-applet and libnm-glib.

Force a full rebuild for new gcc versions if gcov is enabled

This avoids a lot of "Version mismatch - expected 406p got 405*". Because we're changing the content of each file after preprocessing, it even defeats ccache, which is desirable here - otherwise we'd get old versions of the profiling code being resurrected from the cache.

dbus-gobject: move weakref to ObjectExport, with
ObjectRegistration
pointing there

This has the following results:

- * each exported object only needs one weak ref to itself, however many times it is registered
- * because the ObjectRegistration now points to the ObjectExport, it can always remove itself from the list of registrations even if the actual object has been disposed, avoiding a leak (fd.o #36811)

dbus_g_connection_register_g_object: only hook onto signals on first use

This fixes a bug in which an empty list of registrations was considered to be synonymous with the object never having been exported, resulting in this failure mode:

- * register object at n locations
 - the first time, export_signals() is called
- * unregister all of those locations
- * register object at a new location
 - export_signals() is wrongly called again
- * emit a signal
 - the D-Bus signal gets emitted twice

dbus_g_proxy_add_signal: stop falsely claiming that we read introspection

If we believed the introspection, services could change their introspection and remote-crash us, so it's good that we don't. We shouldn't claim that we do, though.

The second sentence is subtle: for D-Bus types that dbus-glib can map

into more than one GLib type, you must currently use the one that dbus-glib would "naturally" produce. The only example I can find is that

object paths must be DBUS_TYPE_G_OBJECT_PATH, even though dbus-glib

can also (in principle) unmarshal object-paths as DBUS_TYPE_G_PROXY.

Run `run-with-tmp-session-bus.sh` directly rather than via `${SHELL}`

It has a correct `#!/bin/sh` line and is executable, so just running it is fine. This avoids running it under a user's chosen interactive shell,

which might be non-POSIX (zsh, csh). Gentoo Portage apparently sets

`SHELL` to `/bin/false`, presumably to trap this sort of thing.

(I've tested this on Debian unstable with `/bin/sh -> /bin/dash`, to check that weren't accidentally relying on `$SHELL` being bash or similar.)

Based on a workaround from Myckel Habets on the Gentoo bug.

Fix switching a connection's GMainContext

```
dbus_connection_setup_with_g_main and  
dbus_server_setup_with_g_main  
are  
intended to switch the setup to a new main loop context if they  
are  
called with a context other than the one with which they were  
initially  
called. However, this does not work in practice. The problem has  
to do  
with libdbus maintaining a list of watches associated with the  
connection. When dbus_connection_set_watch_functions is called,  
it  
first adds the existing watches using the new function and data,  
then  
removes the watches using the old function and data. Remove_watch  
calls  
connection_setup_remove_watch, and the latter does not check that  
the  
watch's connection setup matches the connection setup passed to  
it, so  
it winds up removing the watch from the new connection setup.  
(The  
watch has already been removed from the old setup at this point,  
as a  
side effect of dbus_watch_set_data).
```

Respect property access flags for writing, allow disabling for reads

Because DBus-GLib originally was designed as a generic "object mapping" binding, the handler for org.freedesktop.DBus.Properties simply allowed access (read or write) to any GObject property that was exported.

Later, the (compile time) introspection XML was added, and while we only listed "exported" properties in the dynamic introspection XML, we still allowed Get or Set calls to any property that was valid.

With this patch, we deny writes to properties which aren't listed in the XML, or are listed as read-only.

For backwards compatibility however, we still allow reads. A service may disable this by calling `dbus_glib_global_set_disable_legacy_property_access()`.

core: don't pass malformed error interface to dbus (rh#581794)

While clients should really register their errors, dbus-glib shouldn't be passing a malformed error interface to dbus either. It's just not nice and libdbus will call abort().

See https://bugzilla.redhat.com/show_bug.cgi?id=581794

core: allow duplicate property names on GInterfaces

Allows dbus-glib clients to handle objects that implement more than one interface with the properties of the same name. Normally this would not be allowed since with GObject all properties are in the same namespace. This patch allows the interface to register "shadow" properties on a per-interface basis which redirect the lookup of the property name.

Add GMainContext to dbus_g_bus_get_private, add a test case

To even sort of work with threads right now, a common workaround is to open a private connection. This patch more explicitly supports creating a private connection, associating it with the GMainContext which will be used for a thread.

Also, add a (very simple) test case which just uses a private connection for the default main context.

dbus-gvalue: set an error when demarshal_basic doesn't recognize type

By passing `dbus_g_proxy_call` an incorrect signature, we can cause the function to fail but not provide any error message (if `G_DISABLE_ASSERT` is defined). As `smvc` pointed out, this can also become a runtime error when a telepathy CM changes signature, but the client hasn't been updated. As such, `g_assert` isn't an appropriate action. See <http://bugs.debian.org/541632> for more information.

This patch causes it to set an error when demarshalling a type that it's not expecting. Instead of a NULL error, one instead sees something like the following when the method returns a path object but the client expected a string:

```
"modem Create() failed: Expected type gchararray, got type code 'o'"
```

Bug 19623 - Add dbus_g_bus_get_private

Useful for cases where you have to get a private connection, among them to work around threading issues.

Signed-off-by: Colin Walters <walters@verbum.org>

commit 90e2199ac99f5b8ab0cd5f45dcb398ecf9af03d9
Author: Will Thompson <will.thompson@collabora.co.uk>
Date: 2009-09-12 11:58:22 +0100

Copy object registration list when unregistering.

Since the list of registrations on the object is modified when each path is removed, iterating it directly is wrong: after the first pass of the loop, 'iter' would point to a link which has been freed.

commit 0263b72669de710e0adda419a520ae9f123a1be9
Author: Colin Walters <walters@verbum.org>
Date: 2009-08-19 13:27:53 -0400

Support duplicate object registrations

Before commit e869fda4, we semi-supported registering the same object multiple times. We'd accept messages for both paths, however when signals were emitted, they'd both use the first object path.

That commit simply disallowed multiple registrations, which broke backwards compatibility with some projects like PolicyKit which

had the same object registered with different paths.

With this commit, explicitly allow and support multiple registrations.

The primary change is that signals are now emitted once for each registration path of an object, using the correct path.

Bug 14579: remove pending call from hash table before cancelling it

Previously, the code implicitly assumed that cancelling the pending call would not cause the DBusGProxy to be freed. This can fail if `user_data` for the pending call holds the last reference to the DBusGProxy - in this case, it is unsafe to be manipulating the contents of "priv" after the call is cancelled.

fd.o #13908: silently initialize specialized types whenever required

Colin Walters asks: "Is there a reason not to just do the initialization at the time someone calls one of the public API entry points that depends on it?". This turns out to be non-trivial because those public

API entry
points are themselves used inside the initialization.

fd.o#20884: dbus_g_proxy_manager_replace_name_owner: don't leave freed memory in the hash table if the name was the owner's first

Here's a situation where this code would fail:

```
* an owner :1.42 owns a name com.Example and a name org.Example
* the owner_names hash table contains { :1.42 => c }, where
  c is a GSList link with data = "com.Example", next = o and
  o is a GSList link with data = "org.Example", next = NULL
* the name owner for com.Example changes so :1.42 no longer owns
the
  name
* initially, names == c
* g_slist_delete_link unlinks and frees c, and sets names = o
* but c is still in the hash table, so next time we look in the
hash
  table, we crash
```

The fix is to replace c with o in the owner_names hash table.

Bug 16776: teach dbus_g_method_return_error about DBUS_GERROR

Code called by dbus_g_method_return_error assumes that errors in the

domain DBUS_GERROR always have the code DBUS_GERROR_REMOTE_EXCEPTION.

This is clearly not true, and it would be nice to be able to raise the

"well-known" D-Bus errors from library user code.

Bug #17329: allow hash tables to contain complex types

Previously, dbus-glib has provided destroy functions for the keys and values when constructing hash tables, so that any hash tables it constructed could be entirely freed (along with their contents) by destroying/unreffing. Unfortunately this meant that any "complex" types, where you need to know the GType in order to free them, were not allowed in hash tables. In real terms, this was anything which dbus-glib marshalled to a GPtrArray, so any array of arrays, variants, structures, object paths, or other boxed types were not allowed as hash values.

This patch allows a broader range of types to be used as the values in hash tables, including those where no simple free function is available. Instead of relying on the key/value destroy functions, the new

hash_free
function uses g_hash_table_foreach_steal to remove the keys and
values
pairwise and free them when the type is known.

Unfortunately, it's part of the API assumptions that hash tables
which
were produced through the current API had valid free functions,
and
particularly that if the hash table was refed by the application,
that
the keys/values would persist beyond when dbus-glib had unrefed
it, and
be freed when the hash table was later destroyed. So it's not
sufficient
to use only this new freeing method on all hash tables from now on
- we
have to behave in the old way for all of the previously allowable
types
(including any hash tables which contain any hash tables which
were
freeable in the old way).

However, as these new hash tables contain values which will not
be freed
if you manipulate the hash table directly (removing or replacing
keys,
or destroying or unrefing it directly), and g_boxed_free should
be used
instead, a false free function is provided to print a critical
warning
for the developer in the case that memory would be leaked.

Bug #17798: add support for 'o', 'g' and 'as' in dictionaries

This teaches the parameterised hash table about how to hash,
compare and
free object paths and signatures, allowing them to be used as
hash keys
and values, and also how to free strvs, so they can be used as
values.

Adds some simple test methods which echo a{gas} and a{oas}

dictionaries
back immediately and compare the results.

Bug #17795: depend on Glib 2.10 for hash unref consistency

Commit a8bf32 (for bug #11396) introduced a compile-time version
check
for Glib 2.10 which changed whether hash_simple_free called
g_hash_table_unref or g_hash_table_destroy. This is at best
useless
for
people who actually wanted to rely on _unref being used instead of
_destroy, because dbus-glib can legitimately be built against
older
versions of Glib than that in use by the application itself, and
at
worst harmful as applications relying on the _unref semantics
would have

their assumptions violated on platforms where this was the case.
Given
in /most/ cases now, Glib 2.10 is readily available, and we were
in this
kinda vague state where people could've used `_unref` and gotten
away with
it, I'm going to say that's what our ABI is now, and stick to
it. People
can depend on the next version of `dbus-glib` if they rely on
`_unref`.

Install the type info before creating signals

This fixes the type system warnings from peer-server, because the types were used (when creating signals) before they were created. Installing type info initialises the types.

```

Add new API for specifying the timeout in DbusGProxy calls.

This applies the patch from S. Nalliami <snallammai@novell.com> to provide new glib API's to allow the user to specify the timeout parameter for the method calls.

Currently, in the dbus-glib APIs, the timeout value for synchronous and asynchronous method calls is hard coded as -1 (ie. 25seconds) which inhibits the user from specifying shorter or longer timeout values. The new APIs take the timeout value as an argument and processes the method calls.

Fixes bug #9832.

2005-05-06 Robert McQueen <robot101@debian.org>

* glib/dbus-gtype-specialized.c: Fix obvious leak of GArray
in every
call to dbus_g_type_get_struct.

glib/dbus-gtype-specialized.c | 9 ++++++--
1 file changed, 7 insertions(+), 2 deletions(-)

commit 9b151fd7a396463aa3f7c6ac0a14df444c78a6b1
Author: Robert McQueen <robot101@debian.org>
Date: 2006-06-07 00:03:57 +0000

2005-05-06 Robert McQueen <robot101@debian.org>

* glib/dbus-gvalue-utils.c: Fix the failing test where static
string
pointers were put into a GPtrArray-based specialised
collection,
and
then freed along with the array. GValues which you add into
collections or maps which have the NOCOPY flag set are assumed
to not
belong to the caller, so rather than the existing
pointer-stealing
semantics, they are copied instead. Given that the main
consumers of
this abstraction are the bindings themselves, I don't think

this is
too bad, but others should watch their choice of take vs
set_static.

glib/dbus-gvalue-utils.c | 24 ++++++-----
1 file changed, 14 insertions(+), 10 deletions(-)

commit 5559e67b90b3c186bf0002253587013264ce9dc0
Author: Robert McQueen <robot101@debian.org>
Date: 2006-06-06 23:07:04 +0000

2005-05-06 Robert McQueen <robot101@debian.org>

* glib/dbus-gvalue-utils.c: Spotted a warning about the return
value
of `g_slist_prepend` not being used. Fixed copying of `slist`-based
specialised collections, then wrote a test case and found that
it was
all broken. Went on to fix iterating and appending too. Good
thing
nobody uses this code yet.

glib/dbus-gvalue-utils.c | 101
+++++-----
1 file changed, 89 insertions(+), 12 deletions(-)

commit 7ca236d43bc91778e90ac59500aeb1d68c8acd6f
Author: Robert McQueen <robot101@debian.org>
Date: 2006-06-06 19:45:39 +0000

2005-05-06 Robert McQueen <robot101@debian.org>

* glib/dbus-gvalue-utils.c: Remove duplicated code by having
all of
the iterators use `gvalue_take_ptrarray_value` (the `GValues`
themselves
are discarded without unsetting, so it makes no difference
whether
we take or `set_static`). Remove cases for `G_TYPE_POINTER` because
there really is nothing useful we can do with them in our
specialised types - we **need** boxed copy/free functions at
the very
least.

commit 8896d43457634c4c10d9909907d0d9082b520a07
Author: Havoc Pennington <hp@redhat.com>
Date: 2006-05-21 05:33:52 +0000

2006-05-21 Havoc Pennington <hp@redhat.com>

* glib/dbus-gproxy.c: Put in a pile of assertions that the proxy name is not NULL when it shouldn't be. Also a couple of possible fixes for #4637 though I don't understand why the bug happens, to be honest... also the object constructor has an assert name != NULL and the name is only currently NULL for peer-to-peer proxies that I don't think anyone uses? So it should be asserting. Anyway, for now at least see if we get an earlier assertion failure.

* glib/dbus-gvalue-utils.c: Put in a couple of assertions for apparently broken code to be sure the tests fail and someone will fix them...

* dbus/dbus-message.c (dbus_message_iter_get_fixed_array):
Patch from Rob Taylor <rob.taylor@collabora.co.uk> to correct
a bogus
assertion that the next element to read from the iter is fixed in
size. This is not the case when you are at the end of the iter,
because the next element type is INVALID.

* dbus/dbus-string.c (_dbus_string_init_const_len): Correct a
a bogus assert which means that you may not initialise a 0-length
string unless you provide a non-NULL pointer. This prevented
you from marshalling messages containing zero-length arrays in
some cases.

* glib/dbus-gvalue.c (demarshal_collection_array): Another patch
from Rob to correct bogus asserts when trying to demarshal an
array and get_fixed_array got you 0 elements. Append nothing to
the GArray in this case.

* test/glib/test-dbus-glib.c: Add a test case for round-tripping
an empty array via the glib bindings. Without all of the above
patches, this new test fails.

glib/dbus-gtype-specialized.h, glib/dbus-gvalue-utils.c,
glib/dbus-gvalue-utils.h, glib/dbus-gvalue.c:
Patch from Rob Taylor <rob.taylor@collabora.co.uk> to add a big
missing piece of the glib bindings jigsaw puzzle. This modifies
the existing specialised types to have N type parameters (rather
than the current 1 or 2 for arrays and dictionaries
respectively).
You can then use this to get a glib type to represent any

arbitrary
D-Bus struct type using `dbus_g_type_get_struct`. The only implementation of these types is with `GValueArrays` as before, but it's now possible to store these in arrays, emit them in signals, etc.

Author: John (J5) Palmieri <johnp@redhat.com>
Date: 2005-11-22 20:37:00 +0000

* configure.in: Add test/name-test/Makefile to the generated
Makefile list

* dbus/dbus-shared.h (#define DBUS_NAME_FLAG_ALLOW_REPLACEMENT):
New flag which replaces DBUS_NAME_FLAG_PROHIBIT_REPLACEMENT
(#define DBUS_NAME_FLAG_DO_NOT_QUEUE): New flag for specifying
not to queue an owner if it can't be the primary owner

* bus/bus.h: Add new internal BusOwner struct

* bus/driver.c (bus_driver_handle_hello): Send flags (0 for
default)
to bus_registry_ensure and don't set the prohibit_replacement
flag

since they are now set per BusOwner and not per name.
(bus_driver_handle_list_queued_owners): bus method
(ListQueuedOwners)
that returns the list of connections in a name's connection queue

* bus/services.c (struct BusService): remove prohibit_replacement
field
(struct BusOwner): new struct for keeping track of queued

connections
and their associated flags for the queue
(struct BusRegistry): add a BusOwner memory pool
(bus_registry_new): initialize the BusOwner memory pool
(bus_registry_unref): free the BusOwner memory pool
(_bus_service_find_owner_link): new internal method for
searching the queue for a specific connection
(bus_owner_set_flags): new method for adding setting the flags
on a
bus owner
(bus_owner_new): new method that creates a BusOwner object
from the
pool and sets its flags
(bus_owner_ref, bus_owner_unref): ref counting for BusOwner
objects
(bus_registry_ensure): Add the flags parameter
(bus_registry_acquire_service): Switch from using raw connections
to
using the BusOwner struct
Add new state machine for dealing with the new set of flags
(bus_registry_set_service_context_table, struct
OwnershipCancelData,
cancel_ownership, free_ownership_cancel_data,
add_cancel_ownership_to_transaction, struct OwnershipRestoreData,
restore_ownership, free_ownership_restore_data,
add_restore_ownership_to_transaction): Switch to using BusOwner
instead of raw connections
(bus_service_add_owner): Add flags parameter
Switch to using BusOwner instead of raw connections
Add state machine for dealing with the new set of flags
(bus_service_swap_owner): Swaps the first and second owners in
the
queue. Used to make sure proper signals are sent when a
service
looses
or gains primary ownership. We never insert an owner at the
top of the
queue. Instead we insert it in the second position and then
swap.
(bus_service_remove_owner): Remove the owner from the queue
sending
out the NameLost and NameOwnerChanged signals if the we were the
primary owner
(bus_service_get_primary_owners_connection): New method that
extracts
the connection from the primary owner
(bus_service_get_primary_owner): Returns the BusOwner instead
of the
connection
(bus_service_get_allow_replacement): Changed from the old
bus_service_get_prohibit_replacement method. Checks the flags
of the

primary owner and returns if it can be replaced or not
(bus_service_set_prohibit_replacement): removed
(bus_service_has_owner): returns TRUE if and owner with
the specified connection exists in the queue

* dbus/dbus-bus.c (dbus_bus_connection_get_unique_name):
New helper
method that only compiles if tests are enabled. Allows us to
get the
unique name of a connection so we can check it against the
queue when
doing regression tests

* bus/activation.c (bus_activation_send_pending_auto_activate),
bus/dispatch.c (bus_dispatch),
bus/driver.c (bus_driver_handle_get_service_owner,
bus_driver_handle_get_connection_unix_user,
bus_driver_handle_get_connection_unix_process_id,
bus_driver_handle_get_connection_selinux_security_context),
bus/signals.c (connection_is_primary_owner):
use bus_service_get_primary_owners_connection instead of
bus_service_get_primary_owner

* dbus/dbus-sysdeps.c (_dbus_connect_unix_socket,
_dbus_listen_unix_socket): Calculate the length of the socket
path and use that instead of using a fixed length which was
causing socket names to contain many trailing Nul bytes.

* dbus/dbus-glib-lowlevel.h, glib/dbus-gobject.c
(dbus_g_method_get_sender): New method for extracting the sender
from a DBusGMethodInvocation
(dbus_g_method_return_get_reply): changed name to
dbus_g_method_get_reply
(dbus_g_method_return_send_reply): changed name to
dbus_g_method_send_reply

* doc/dbus-specification.xml: New docs that describe how the new
queueing system works and talks about the changes to the how
we specify socket names

* glib/examples/example-service.c,
glib/examples/example-signal-emitter.c,
glib/examples/statemachine/statemachine-server.c:
Changed the RequestName flags to the new system

* test/name-test/ (test-names.c, run-test.sh, Makefile.am): New
regression test suite for testing various states of the new
queueing system

commit 57b6ef4e8648c0c7f9b059690c4a35e73932669f

Author: Robert McQueen <robot101@debian.org>

Date: 2005-11-15 19:34:32 +0000

2005-11-15 Robert McQueen <robot101@debian.org>

* dbus/dbus-glib-lowlevel.h, glib/dbus-gobject.c: Patch from Rob Taylor to add two methods, `dbus_g_method_return_get_reply` and `dbus_g_method_return_send_reply`, to allow you to get the reply message from a `DBusGMethodInvocation`, append arbitrary stuff to it, and send it. The GLib bindings can't marshal a return value of something like `a(s)` if the array is empty - ultimately they should be made to heed the signature of the out arguments as the Python bindings now can, but this is a workable interim solution which might have other applications.

commit adc1cd1de84b057cc858b1226522d2fde96871a0
Author: John (J5) Palmieri <johnp@redhat.com>
Date: 2005-10-18 04:38:04 +0000

- * glib/dbus-gvalue-utils.c (hash_free_from_gtype): handle gdouble
and G_TYPE_VALUE_ARRAY (DBUS_TYPE_STRUCT)
(gvalue_from_hash_value, hash_value_from_gvalue): handle gdouble
- * glib/dbus-gvalue.c (dbus_gvalue_to_signature): add missing
DBUS_STRUCT_BEGIN_CHAR and DBUS_STRUCT_END_CHAR charaters
when constructing struct signatures
- * python/_dbus.py (Bus): handle private connections using the
private keyword in the constructor. defaults to private=False
(Bus::close): new method to close a connection to the bus
- * python/dbus_bindings.pyx (Connection::close): renamed method
was previously called disconnect
(bus_get): now supports getting a private connection
- * python/proxies.py (ProxyMethod::__call__): check if ignore_reply

keyword is set to True. if it is, execute the method without waiting
for a reply
(ProxyObject::_introspect_execute_queue): new method for executing all the pending methods that were waiting for the introspect to finish. this is called when introspect either succeeds or fails
(ProxyObject::_introspect_error_handler): call queued methods

```

commit 8c16af02c159982b451289945835a86ff56805c2
Author: John (J5) Palmieri <johnp@redhat.com>
Date: 2005-10-05 20:43:46 +0000

* glib/dbus-gvalue.c (marshal_variant): call _dbus_gvalue_marshal instead of marshal basic so we can handle recursive types in a variant

* test/glib/test-dbus-glib.c: Add test for marshaling recursive types in variants

* test/glib/test-service-glib.c, test-service-glib.xml
(my_object_echo_variant [EchoVariant],
my_object_process_variant_of_array_of_ints123
[ProcessVariantOfArrayOfInts123]):
Add two test methods

* python/introspect_parser.py: New module for parsing introspect data.

* python/dbus_bindings.pyx:
(various places): when throwing errors fix to use errormsg instead of message local variable because Pyrex can get confused with other message variables (initial patch by Robert McQueen <robert.mcqueen at collabora.co.uk>)
(MessageIter::parse_signature_block): new method for getting the next block in a signature.
(MessageIter::append_strict): new method for appending values strictly using the passed in signature instead of guessing at the type
(MessageIter::append_dict, append_struct, append_array): use signatures to marshal children if the signature is available

* python/exceptions.py (IntrospectionParserException): new exception

* python/proxies.py (ProxyMethod::__call__): Marshal args with introspected signatures if available, else we fall back to the old way of doing things.
(ProxyObject::_introspect_reply_handler): parse introspection data

* python/service.py (ObjectType::_reflect_on_method): Properly terminate <method> if there are no args in the reflection data

* test/python/test-client.py: add tests for talking with the GLib test server. This gives us better coverage for introspection since python to python will always generate arguments as variants. It also allows us to test the robustness of the GLib bindings and interlanguage communications.

commit a32ca0058020e7e23d72d9ad69fe881ba8b98e93
Author: John (J5) Palmieri <johnp@redhat.com>
Date: 2005-09-06 22:38:54 +0000

* Released 0.50

* Patch from Steve Grubb:

- bus/activation.c (bus_activation_service_reload_test): clean up some indentation
- dbus/dbus-keyring.c (_dbus_keyring_reload): fix conditional
- dbus/dbus-message-factory.c (generate_special): fix a couple of buffer overflows in the test suite. This is non critical because it can not be exploited and this code is only run when doing a make check.

* Patch from Yaakov Selkowitz: Build fixes for Cygwin

- configure.in: Don't check and link against kdeccore, only qt headers
- dbus/Makefile.am: Add -no-undefined to libdbus_1_la_LDFLAGS
- gcj/org/freedesktop/dbus/Makefile.am:

```
add libdbus_gcj_1_la_LDFLAGS = -no-undefined
- glib/Makefile.am: Add -no-undefined to libdbus_glib_1_la_LDFLAGS
and $(DBUS_GLIB_LIBS) to dbus_binding_tool_LDADD
- qt/Makefile.am: Add -no-undefined to libdbus_qt_1_la_LDFLAGS
- tools/Makefile.am: Add platform extentions to binaries
(i.e. .exe on windows)
```

```
* configure.in:
- Make it so if no suitable version of python is found we only
disable building python instead of exiting the configure script
- Require version 2.4 of glib for glib bindings
- Up version to 0.50
```

```

```
* glib/dbus-gvalue.c (struct _DBusGValue): Delete.
(dbus_g_value_types_init): Remove assertion.
(dbus_g_value_get_g_type, dbus_g_value_open)
(dbus_g_value_iterator_get_values, dbus_g_value_get_signature)
(dbus_g_value_copy, dbus_g_value_free): Delete unimplemented
functions related to DBusGValue. Now we marshal/demarshal
structures as GValueArray.
(dbus_gtype_from_signature_iter): Return G_TYPE_VALUE_ARRAY for
structures.
(signature_iter_to_g_type_array): Don't call
signature_iter_to_g_type_struct.
(signature_iter_to_g_type_struct): Delete.
(dbus_gvalue_to_signature): Delete.
(dbus_gvalue_to_signature): New function with same name as other
one; we can convert structures to signatures.
(demarshal_valuearray): New function.
(get_type_demarshaller): Use it.
(demarshal_recurse): Delete.
(marshal_proxy): New function.
(marshal_map): Warn if we can't determine signature from type.
(marshal_collection_ptrarray): Ditto.
(marshal_collection_array): Ditto.
(get_type_marshaller): Use marshal_valuearray.
(marshal_recurse): Delete.
(_dbus_gvalue_test): Add some tests.

* dbus/dbus-glib.h (struct _DBusGValueIterator):
(dbus_g_value_get_g_type, DBUS_TYPE_G_VALUE)
(dbus_g_value_open, dbus_g_value_iterator_get_value)
(dbus_g_value_iterator_get_values, dbus_g_value_iterator_recurse)
(dbus_g_value_free): Remove prototypes.

* glib/dbus-binding-tool-glib.c
(dbus_g_type_get_lookup_function):
Handle
G_TYPE_VALUE_ARRAY.

* glib/examples/example-service.c:
* glib/examples/example-client.c: Implement GetTuple.

* test/glib/test-dbus-glib.c:
* test/glib/test-service-glib.c:
* test/glib/test-service-glib.xml: Add structure tests.

commit 5c39fa43d8eb87284abe7d009349523ad5398db0

Author: Colin Walters <walters@verbum.org>

Date: 2005-07-10 22:54:18 +0000

2005-07-10 Colin Walters <walters@verbum.org>

- * doc/TODO: Knock off some GLib items with this patch.
- * glib/dbus-gvalue-utils.c (`_dbus_gtype_can_signal_error`) (`_dbus_gvalue_signals_error`): New functions.
- * glib/dbus-gvalue-utils.h: Prototype them.
- * glib/dbus-gobject.c (`arg_iterate`): Update to handle return vals and change to not output const/retval flags for input args. All callers updated.
(`invoke_object_method`): Refactor to handle return values. Add some more comments in various places. Remove debug `g_print`.
- * glib/dbus-binding-tool-glib.h (`DBUS_GLIB_ANNOTATION_RETURNVAL`): New.
- * glib/dbus-binding-tool-glib.c (`dbus_g_type_get_marshall_name`): Handle `G_TYPE_NONE`.
(`compute_gsignature`): New function; refactored from code from `compute_marshall` and `compute_marshall_name`. Enhance to handle return values and async ops more cleanly. Update for async ops returning `NONE` instead of `BOOLEAN`.
(`compute_marshall`, `compute_marshall_name`): Call `compute_gsignature` and output appropriate string.
(`generate_glue`): Handle return value annotation. Also don't dump constness flag for input arguments.
- * glib/Makefile.am (`DBUS_GLIB_INTERNALS`): New variable; contains files shared between installed library and utilities.
(`libdbus_glib_la_SOURCES`): Move some stuff into `DBUS_GLIB_INTERNALS`.
(`libdbus_gtool_la_SOURCES`): Suck in `DBUS_GLIB_INTERNALS` so the binding tool can access gtype utility functions.
- * test/glib/test-service-glib.c:
- * test/glib/test-service-glib.xml:
- * test/glib/test-dbus-glib.c: Add some tests for return values.

commit 00de44640de45aa6068ca9d1b42deb801b430320
Author: Colin Walters <walters@verbum.org>
Date: 2005-07-09 18:54:45 +0000

2005-07-09 Colin Walters <walters@verbum.org>

* glib/dbus-gparser.c (parse_annotation): Add annotations to argument if available, not method.

* glib/dbus-gobject.c (arg_iterate): More verbose warnings. (invoke_object_method): First, remove some redundant GValues (object_value, error_value) in favor of working on array directly. Second, rework constness to be less buggy. Now we iterate directly over the argument metadata instead of parallel iterating over output signature and metadata.

* glib/dbus-glib-tool.h: Add INVALID_ANNOTATION error.

* glib/dbus-binding-tool-glib.c (generate_glue): Barf on const annotation on input args.

```

- * glib/examples/statemachine/statemachine.c:
- * glib/examples/statemachine/statemachine-server.c:
- * glib/examples/statemachine/statemachine-client.c: Fix some
 bugs,
 add progress bar, etc.
- * glib/dbus-gvalue.c (register_array, register_dict): Delete; not
 needed anymore due to generic array/map marshalling.
 (dbus_g_value_types_init): Don't register basic arrays or the
 string/string hash.
 (dbus_gtype_from_signature_iter): Don't try to recurse into
 variants.
 (dbus_gtype_to_signature): Check collection/map before type
 metadata.
 (demarshal_garray_basic): Renamed to demarshal_collection_array.
 (demarshal_ghashtable): Renamed to demarshal_map; fix to use new

generic map creation/append functions instead of hash table specifically.
(get_type_demarshaller): Handle maps.
(demarshal_collection): Dispatch on collection type to either demarshal_collection_ptrarray or demarshal_collection_array.
(get_type_marshall): Handle maps.
(marshal_collection): Dispatch collection type to either marshal_collection_ptrarray or marshal_collection_array.
(_dbus_gvalue_test): New test.

* glib/dbus-gvalue-utils.c (unset_and_free_g_value): New function.

(hash_free_from_gtype): Use it to free GValues.
(hashtable_append): New function.
(ptrarray_append): Fix prototype.
(slist_append): Ditto.
(_dbus_gvalue_utils_test): Extend tests.

* glib/dbus-gtype-specialized.c

(dbus_g_type_specialized_init_append): Renamed from dbus_g_type_specialized_collection_init_append. Remove const from value, since we steal it.

(dbus_g_type_specialized_map_append): New function.

* glib/dbus-gtype-specialized.h: Update prototypes. Add DBusGTypeSpecializedMapAppendFunc.

* glib/dbus-gtest.c (dbus_glib_internal_do_not_use_run_tests): Run _dbus_gvalue_test.

* glib/dbus-gtest.h: Prototype it.

```
* glib/dbus-gvalue.h (dbus_gtype_to_signature)  
(dbus_gvalue_marshal): Update prototypes.
```

```
* glib/dbus-gvalue.c: Update all marshalling functions to take  
const GValue instead of GValue.  
(signature_iter_to_g_type_array): Return a GPtrArray for nonfixed  
types.  
(dbus_gvalue_to_signature): Update for dbus_gtype_to_signature  
change.  
(dbus_gtype_to_signature): Handle generic collecitons and maps.  
Return a newly-allocated string.  
(demarshal_proxy, demarshal_object_path, demarshal_object)
```

```

        (demarshal_strv, demarshal_ghashtable): Set error, don't assert
if
we get the wrong types from message.
(get_type_demarshaller): New function, extracted from
dbus_gvalue_demarshal.
(demarshal_collection): New function, demarshals generic
collection.
(dbus_gvalue_demarshal): Just invoke result of
get_type_demarshaller.      Throw error if we don't have one.
(marshal_garray_basic): Abort on OOM.
(get_type_marshaller): New function, extracted from
dbus_gvalue_marshal.
(collection_marshal_iterator, marshal_collection): New functions;
implements generic marshalling for an iterable specialized
collection.
(dbus_gvalue_marshal): Just invoke result of get_type_marshaller.

* glib/dbus-gvalue-utils.c (gvalue_from_ptrarray_value): Handle
G_TYPE_STRING.
(ptrarray_value_from_gvalue): Ditto.
(ptrarray_append, ptrarray_free): New functions.
(slist_constructor, slist_iterator, slist_copy_elt, slist_copy)
(slist_append, slist_end_append, slist_free): New functions.
(dbus_g_type_specialized_builtins_init): Add append fuctions
for GPtrArray and GSList.  Register GSList.
(test_specialized_hash, _dbus_gvalue_utils_test): New functions.

* glib/dbus-gtype-specialized.h
(DBusGTypeSpecializedAppendContext):
New.
(dbus_g_type_specialized_collection_init_append)
(dbus_g_type_specialized_collection_append)
(dbus_g_type_specialized_collection_end_append): Prototype.
(DBusGTypeSpecializedCollectionVtable): Add append_func and
end_append_func.

* glib/dbus-gtype-specialized.c
(dbus_g_type_specialized_collection_init_append)
(dbus_g_type_specialized_collection_append)
(dbus_g_type_specialized_collection_end_append): New functions.
(dbus_g_type_map_value_iterate): Take const GValue.
(dbus_g_type_collection_value_iterate): Ditto.

* glib/dbus-gtest.c (dbus_glib_internal_do_not_use_run_tests):
Run
_dbus_gvalue_utils_test.

* glib/dbus-gtest.h: Prototype it.

* glib/dbus-gproxy.c (dbus_g_proxy_manager_filter): Avoid
using uninitialized owner_list.
(dbus_g_proxy_begin_call_internal): Move return_if_fail to

```

public API.
(dbus_g_proxy_end_call_internal): Update to use error set
from dbus_gvalue_demarshal instead of setting it here.
(dbus_g_proxy_begin_call): Move return_if_fail here.

* glib/dbus-gobject.c (write_interface): Update for
dbus_gtype_to_signature returning new string.

* configure.in: Add glib/examples/statemachine.

commit 8b39e9d32cb505d4f9550ca24627020e5edd9681
Author: Colin Walters <walters@verbum.org>
Date: 2005-07-06 21:27:45 +0000

```

2005-07-06 Colin Walters <walters@verbum.org>

```

* dbus/dbus-glib.h (DBusGPendingCall, DBusGPendingCallNotify)
(DBUS_TYPE_G_PENDING_CALL, dbus_g_pending_call_get_g_type)
(dbus_g_pending_call_ref, dbus_g_pending_call_unref): Delete.
(dbus_g_pending_call_set_notify, dbus_g_pending_call_cancel):
Delete in favor of dbus_g_proxy_begin_call and
dbus_g_proxy_cancel_call.
(DBusGProxyCall, DBusGProxyCallNotify): New.
(dbus_g_proxy_begin_call): Change prototype to take callback,
user
data, and destroy function. This replaces

```

```

dbus_g_pending_call_set_notify.
(dbus_g_proxy_cancel_call): Prototype.
(DBusGAsyncData): Delete, shouldn't be needed anymore.

* glib/dbus-gproxy.c (struct _DBusGProxy): Add call_id_counter
and
pending_calls map.
(struct _DBusGProxyManager): Add bus_proxy member, which is an
internal proxy for calls to the bus. Remove
pending_nameowner_calls, now the internal proxy keeps track.
(dbus_g_proxy_manager_unref): Unref bus proxy, remove reference
to
pending_nameowner_calls.
(got_name_owner_cb): Update prototype, and use
dbus_g_proxy_end_call.
(got_name_owner_cb): Remove reference to pending_nameowner_calls.
(dbus_g_proxy_manager_register): Delete directly libdbus code in
favor of using internal proxy.
(dbus_g_proxy_manager_unregister): Update to use
dbus_g_proxy_cancel_call for any pending GetNameOwner call.
(dbus_g_proxy_init): Initialize pending calls map.
(dbus_g_proxy_constructor): New.
(dbus_g_proxy_class_init): Add get/set property functions,
constructor, and add NAME, PATH, and INTERFACE properties.
(cancel_pending_call): New function.
(dbus_g_proxy_dispose): Iterate over any outstanding calls and
cancel them.
(dbus_g_proxy_set_property, dbus_g_proxy_get_property): New.
(GPendingNotifyClosure): New structure.
(d_pending_call_notify, d_pending_call_free): Moved here from
dbus-glib.c.
(DBUS_G_VALUE_ARRAY_COLLECT_ALL): Moved around to satisfy
function
ordering.
(manager_begin_bus_call): New internal function for talking to
internal bus proxy.
(dbus_g_proxy_new): Construct object using GObject properties.
(dbus_g_proxy_begin_call_internal): Update to take user data,
etc.
Create closure of same, and insert call into map of pending
calls.
(dbus_g_proxy_end_call_internal): Take call id instead of pending
call. Look up pending call in current set. Remove it when we've
completed.
(dbus_g_pending_call_end, dbus_g_proxy_end_call_internal):
Delete.
(dbus_g_proxy_begin_call): Change API to take callback, user
data,
and destroy function directly.
(dbus_g_proxy_end_call): Update to take DBusGProxyCall.
(dbus_g_proxy_call): Invoke with NULL callback.
(dbus_g_proxy_cancel_call): New function, replaces

```

dbus_g_pending_call_cancel.

- * glib/dbus-gparser.c (validate_signature): Fix call to dbus_set_g_error.
- * glib/dbus-gobject.c (dbus_g_object_type_dbus_metadata_quark): New quark for attaching metadata to GType.
 - (info_hash): Delete.
 - (lookup_object_info): Look up using quark.
 - (dbus_g_object_type_install_info): Check that a type is classed, not that it's an object. Also just install type data using quark instead of using global hash.
- * glib/dbus-glib.c (dbus_g_pending_call_ref) (dbus_g_pending_call_unref, dbus_pending_call_get_g_type) (GPendingNotifyClosure): Delete.
 - (d_pending_call_notify, d_pending_call_free): Move to dbus-gproxy.c.
 - (dbus_g_pending_call_set_notify, dbus_g_pending_call_cancel): Delete.
- * glib/dbus-binding-tool-glib.c (generate_client_glue): Disable async client method generation until we can fix it...
- * tools/dbus-viewer.c (load_child_nodes): Use dbus_g_proxy_call. (load_from_service_thread_func): Ditto.
- * tools/dbus-names-model.c (struct NamesModel): Hold DBusGProxyCall.
 - (have_names_notify): Update prototype, use dbus_g_proxy_cancel_call.
 - (names_model_reload): Update for new dbus_g_proxy_begin_call API.
- * tools/dbus-monitor.c (filter_func): Update for print_message API change.
- * test/glib/test-dbus-glib.c: Add more tests for async invocations. Update many begin_call/end_call pairs to just use dbus_g_proxy_call.
- * tools/dbus-send.c (main): Add --print-reply=literal mode. This allows us to dump print-introspect.c.
- * tools/dbus-print-message.h (print_message): Add literal argument to print_message which is intended to allow printing arguments without metadata like "string=".
- * tools/dbus-print-message.c (print_iter): Add literal argument. (print_message): Allow printing string messages literally.

commit 5c82c5ce0eba4ec3bbb0454f3987f56de968bf95

Author: Colin Walters <walters@verbum.org>
Date: 2005-06-30 18:22:09 +0000

2005-06-30 Colin Walters <walters@verbum.org>

- * test/glib/test-dbus-glib.c:
- * test/glib/test-service-glib.c:
- * test/glib/test-service-glib.xml: Update tests for new error setting bits, also add async tests (patch from Ross Burton).

- * test/glib/Makefile.am (test_service_glib_LDADD): Add DBUS_GLIB_THREADS_LIBS.

- * glib/dbus-gproxy.c (get_name_owner) (dbus_g_pending_call_end_valist): Ditto.

- * glib/dbus-gobject.c (error_metadata): New mapping from GError domain (GQuark) to DBusGErrorInfo.
(gerror_domaincode_to_dbus_error_name): Attempt to look up error quark in error_metadata. Take message interface as default error message interface.
(gerror_to_dbus_error_message): Pass message interface.
(dbus_set_g_error): Resurrected.
(dbus_g_error_info_free): New function.
(dbus_g_object_type_install_info): Use g_type_class_ref instead of _peek to actually create the object class if it hasn't been created yet.
(dbus_g_error_domain_register): New function.

- * glib/dbus-gmain.c (dbus_g_bus_get): Switch to dbus_set_g_error.

- * glib/dbus-gparser.c (validate_signature): Ditto.

- * dbus/dbus-glib.h (dbus_g_error_set): Delete.
(dbus_g_error_domain_register): Prototype.

- * glib/dbus-glib.c (dbus_g_error_set): Delete.
Update tests.

Author: Colin Walters <walters@verbum.org>
Date: 2005-06-29 23:52:35 +0000

2005-06-29 Colin Walters <walters@verbum.org>

* dbus/dbus-glib.h: Delete DBUS_TYPE_G_PROXY_ARRAY. Add DBUS_TYPE_G_OBJECT_PATH.

* glib/dbus-gvalue.c (dbus_g_value_types_init): Remove
marshallers
for G_TYPE_OBJECT and DBUS_TYPE_G_PROXY_ARRAY (the latter should
be handled more generically). Add DBUS_TYPE_G_OBJECT_PATH.
(dbus_g_object_path_get_g_type): New function.
(dbus_gtype_from_signature_iter): Map DBUS_TYPE_G_OBJECT_PATH
to DBUS_TYPE_G_OBJECT_PATH by default.
(demarshal_proxy): Remove unused name variable.
(demarshal_object_path, marshal_object_path): New functions.
(demarshal_proxy_array, marshal_proxy_array): Delete.

* glib/dbus-binding-tool-glib.c (dbus_g_type_get_c_name): Map
DBUS_TYPE_G_OBJECT_PATH to char *.
(dbus_g_type_get_lookup_function): Map builtin
DBUS_TYPE_G_OBJECT_PATH.

* test/glib/test-dbus-glib.c
* test/glib/test-service-glib.c (my_object_objpath):
Adapt tests to new object path marshalling.

commit 49fce903db4124277de6aba92f7c03f24d84e598
Author: Colin Walters <walters@verbum.org>
Date: 2005-06-29 16:58:59 +0000

2005-06-29 Colin Walters <walters@verbum.org>

* glib/dbus-gproxy.c (struct _DBusGProxy): Add new member
name_call for keeping track of any outgoing GetNameOwner call.
Also add for_owner and associated.

(struct _DBusGProxyManager): Add owner_names, which is hash table that maps a base name to a list of names it owns (that we're interested in). Add pending_nameowner_calls which is a list of all outstanding GetNameOwner; avoids us having to iterate over every proxy. Add unassociated_proxies which keeps track of name proxies with no associated name owner.
(dbus_g_proxy_manager_unref): Destroy owner_names.
(struct DBusGProxyNameOwnerInfo): New struct for keeping track of name refcounts.
(find_name_in_info, name_owner_foreach)
(dbus_g_proxy_manager_lookup_name_owner, insert_nameinfo)
(dbus_g_proxy_manager_monitor_name_owner)
(dbus_g_proxy_manager_unmonitor_name_owner)
(unassociate_proxies, dbus_g_proxy_manager_replace_name_owner): New functions; they manipulate the owner_names mapping.
(got_name_owner_cb): New function.
(get_name_owner): New function, extracted from dbus_g_proxy_new_for_name_owner.
(dbus_g_proxy_manager_register): For now we need to keep track of all NameOwnerChanged. Also if the proxy is for a name, if we don't already know the name owner, queue a new GetNameOwner request and add it to our list of unassociated proxies.

Otherwise

inc the refcount.

(dbus_g_proxy_manager_unregister): If this proxy is for a name, cancel any pending GetNameOwner call, etc.

(dbus_g_proxy_manager_filter): Handle NameOwnerChanged. Also use the owner_names mapping to look up the current names for the signal source, and dispatch to any proxies for that name.

(dbus_g_proxy_new): Initialize new members.

(dbus_g_proxy_new_for_name): Delete unused proxy variable.

(dbus_g_proxy_new_for_name_owner): Use get_name_owner.

(dbus_g_pending_call_end_valist): New function, extracted from dbus_g_proxy_end_call_internal. Useful when we don't have a

proxy

but want to use the GLib infrastructure. Also note how many arguments in reply were over.

(dbus_g_pending_call_end): New function, just call dbus_g_pending_call_end_valist.

(dbus_g_proxy_end_call_internal): Just call dbus_g_pending_call_end_valist.

* glib/dbus-gobject.c (_dbus_gobject_lookup_marshall):

Fix lookup

of builtin marshaller for STRING_STRING_STRING.

* test/glib/test-dbus-glib.c:

* test/glib/test-service-glib.c:

* test/glib/test-service-glib.xml:

Extend tests to cover name proxies, destruction of owner proxies, etc.

```
* glib/examples/example-signal-recipient.c
(dbus_g_proxy_new_for_name_owner): Create a name proxy.

* tools/dbus-send.c (main): Print D-BUS error name in addition
to message.
```

```
glib/dbus-gobject.c | 14 +-

```

```
2005-06-26 Colin Walters <walters@verbum.org>
```

```
* glib/dbus-glib.c (dbus_set_g_error): Delete.
(dbus_g_error_set): New public function from its ashes; used by
both service-side method implementation and GLib bindings
internals.
(dbus_g_error_has_name, dbus_g_error_get_name): New function.
(_dbus_glib_test): Add some tests.
```

```
* test/glib/test-dbus-glib.c (main): Test dbus_g_error_has_name.
```

```
* test/glib/test-service-glib.c (my_object_throw_error): Use
dbus_g_error_set.
```

```
* glib/dbus-gobject.c (gerror_to_dbus_error_message): Handle
errors thrown by dbus_g_error_set.
```

- * glib/dbus-gmain.c (dbus_g_bus_get): Change to dbus_g_error_set.
- * glib/dbus-gparser.c (validate_signature): Ditto.
- * glib/dbus-gproxy.c (dbus_g_proxy_new_for_name_owner) (dbus_g_proxy_end_call_internal): Ditto.
- * glib/Makefile.am: Generate dbus-glib-error-switch.h, which converts DBUS_ERROR_x to DBUS_GERROR_x. (libdbus_glib_1_la_SOURCES, BUILT_SOURCES, CLEANFILES): Add it.
- * doc/TODO: Remove error TODO.
- * doc/dbus-tutorial.xml: Update with documentation about error handling.
- * dbus/make-dbus-glib-error-enum.sh: Tighten up regexp to make sure we only change DBUS_ERROR to DBUS_GERROR, not all ERROR to GERROR. Also add DBUS_GERROR_REMOTE_EXCEPTION.

```

2005-06-20 Colin Walters <walters@verbum.org>

Patch suggested by Ross Burton <ross@openedhand.com>

- * glib/dbus-gobject.c (export_signals): Free signal name.
- (g_value_init): Use G_VALUE_NOCOPY_CONTENTS to plug memory leak. Add a bit of documentation.
- (dbus_g_method_return_error): Free context, and note we do so.

glib/dbus-gobject.c | 6 ++++-

commit da18702f63a9f33d4f929113b6361062a86443a6
Author: Colin Walters <walters@verbum.org>
Date: 2005-06-17 14:29:48 +0000

2005-06-17 Colin Walters <walters@verbum.org>

- * glib/dbus-gproxy.c (dbus_g_proxy_emit_remote_signal): Don't spew warnings if we get malformed remote signals.

- * glib/dbus-gobject.c (propsig_iterate): New function.
- (lookup_object_info): New function, extracted from lookup_object_and_method.
- (introspect_properties, introspect_signals): Delete; these are merged into write_interface.
- (write_interface): Write out signals and properties here; dump the org.gtk.object stuff and use the interface given in the introspection data blob. Also fix up property XML.
- (lookup_values): New function.
- (introspect_interfaces): Gather a mapping from interface to a list of its methods, signals, and properties, then write out each interface.

(lookup_object_and_method): Use lookup_object_info.
 (struct DBusGSignalClosure): Add interface.
 (dbus_g_signal_closure_new): Add interface. Don't dup signame;
 we can just use the constant data.
 (dbus_g_signal_closure_finalize): Don't free signal name.
 (signal_emitter_marshall): Use interface from signal closure.
 (export_signals): Only export signals mentioned in introspection
 blob.
 (dbus_g_connection_register_g_object): Warn if we have no
 introspection data for an object.
 (funcsig_equal): Remove unused variable.
 (dbus_g_object_register_marshall): Take varargs instead of
 list.
 (dbus_g_object_register_marshall_array): New function,
 extracted from old dbus_g_object_register_marshall.

* glib/dbus-binding-tool-glib.c (struct DBusBindingToolCData):
 Add
 signals and property data.
 (write_quoted_string): New function, extracted from
 generate_glue.
 (generate_glue): Write signals and properties to introspection
 blob.

* dbus/dbus-glib.h (struct DBusGObjectInfo): Include
 exported_signals and exported_properties.
 (dbus_g_object_register_marshall): Update prototype.
 (dbus_g_object_register_marshall_array): Prototype.

* test/glib/test-dbus-glib.c: Extend testing to cover new
 signals.

* test/glib/test-service-glib.c: Add new test signals and method
 to emit them.

* test/glib/test-service-glib.xml: Add some test signals.

* test/glib/Makefile.am (BUILT_SOURCES): Add my-object-marshal.c
 and my-object-marshal.h
 (test_service_glib_SOURCES, test_dbus_glib_SOURCES): Add
 my-object-marshal.c.
 (my-object-marshal.c, my-object-marshal.h): Implement.

* test/glib/.cvsignore: Update.

* doc/TODO: Remove two GLib TODO items fixed by this
 patch.

```

2005-06-12 Colin Walters <walters@verbum.org>

Async signals and various bugfixes and testing by Ross Burton <ross@burtonini.com>.

* glib/dbus-gvalue.h: (struct DBusBasicGValue): Delete.
(dbus_gvalue_genmarshal_name_from_type)
(dbus_gvalue_ctype_from_type): Moved to dbus-binding-tool-glib.c.
(dbus_gtype_to_dbus_type): Renamed to dbus_gtype_from_signature.
(dbus_g_value_types_init, dbus_gtype_from_signature)
(dbus_gtype_from_signature_iter, dbus_gtype_to_signature)
(dbus_gtypes_from_arg_signature): New function prototypes.
(dbus_gvalue_demarshal): Take context and error arguments.
(dbus_gvalue_demarshal_variant): New function.
(dbus_gvalue_demarshal_message): New function.
(dbus_gvalue_store): Delete.

* glib/dbus-gvalue.c:

File has been almost entirely rewritten; now we special-case

more types such as `DBUS_TYPE_SIGNATURE`, handle arrays and hash tables correctly, etc. Full support for recursive values is not yet complete.

- * `glib/dbus-gproxy.c` (`dbus_g_proxy_class_init`): Change last argument of `signal` to `G_TYPE_POINTER` since we now pass a structure.
- (`lookup_g_marshaller`): Delete in favor of `_dbus_gobject_lookup_marshaller`.
- (`marshal_dbus_message_to_g_marshaller`): Use `_dbus_gobject_lookup_marshaller` and `dbus_gvalue_demarshal_message` to handle remote signal callbacks.
- (`dbus_g_proxy_new_from_proxy`): New function; creates a new `DBusGProxy` by copying an existing one.
- (`dbus_g_proxy_get_interface`, `dbus_g_proxy_set_interface`)
- (`dbus_g_proxy_get_path`): New functions.
- (`dbus_g_proxy_marshal_args_to_message`): New function; factored out of existing code.
- (`DBUS_G_VALUE_ARRAY_COLLECT_ALL`): Collect all arguments from a `varargs` array.
- (`dbus_g_proxy_begin_call_internal`): New function.
- (`dbus_g_proxy_end_call_internal`): New function.
- (`dbus_g_proxy_begin_call`): Take `GTypes` instead of `DBus` types as arguments; simply invoke `dbus_g_proxy_begin_call_internal` after collecting args into value array.
- (`dbus_g_proxy_end_call`): Take `GTypes` instead of `DBus` types; invoke `dbus_g_proxy_end_call_internal`.
- (`dbus_g_proxy_invoke`): Simply invoke `begin_call_interanl` and `end_call_internal`.
- (`dbus_g_proxy_call_no_reply`): Take `GTypes` instead of `DBus` types.
- (`array_free_all`): New function.
- (`dbus_g_proxy_add_signal`): Take `GTypes`.

- * `glib/dbus-gobject.h`:
 - (`_dbus_glib_marshal_dbus_message_to_gvalue_array`): Delete.
 - (`_dbus_gobject_get_path`, `_dbus_gobject_lookup_marshaller`): Prototype.

- * `glib/dbus-gobject.c`: Add a global `marshal_table` hash which stores mappings from type signatures to `marshallers`. Change lots of invocations of `dbus_gtype_to_dbus_type` to `dbus_gtype_to_signature`.
 - (`_dbus_glib_marshal_dbus_message_to_gvalue_array`): Delete.
 - (`introspect_signals`): Fix test for `query.return_type`.
 - (`set_object_property`): Update invocation of `dbus_gvalue_demarshal`.
 - (`invoke_object_method`): Many changes. Handle asynchronous invocations. Convert arguments with `dbus_gvalue_demarshal_message`. Handle errors. Use `DBusSignatureIter` instead of `strlen` on args. Handle all arguments generically. Special-case variants.

(dbus_g_method_return, dbus_g_method_return_error): New function.
 (DBusGSignalClosure): New structure, closes over signal information.
 (dbus_g_signal_closure_new): New function.
 (dbus_g_signal_closure_finalize): New function.
 (signal_emitter_marshall): New function; is special marshaller which emits signals on bus.
 (export_signals): New function; introspects object signals and connects to them.
 (dbus_g_object_type_install_info): Take GType instead of GObjectClass.
 (dbus_g_connection_register_g_object): Invoke export_signals.
 (dbus_g_connection_lookup_g_object): New function.
 (DBusGFuncSignature) New structure; used for mapping type signatures tomarshallers.
 (funcsig_hash): New function; hashes DBusGFuncSignature.
 (funcsig_equal): New function; compares DBusGFuncSignature.
 (_dbus_gobject_lookup_marshall): New function.
 (dbus_g_object_register_marshall): New function; used to register a marshaller at runtime for a particular signature.

* glib/dbus-gmain.c (_dbus_gmain_test): Add various tests.

* glib/dbus-binding-tool-glib.h: Add DBUS_GLIB_ANNOTATION_ASYNC which notes a server method implementation should be asynchronous.

* glib/dbus-binding-tool-glib.c
 (dbus_binding_tool_output_glib_server): Call dbus_g_value_types_init.
 (write_formal_parameters): Use dbus_gtype_from_signature. Handle variants specially.
 (dbus_g_type_get_lookup_function): Turn GType into an invocation of a lookup function.
 (write_args_for_direction): Use dbus_g_type_get_lookup_function.
 (write_untyped_out_args): New method; write output arguments.
 (write_formal_declarations_for_direction): Function for writing prototypes.
 (write_formal_parameters_for_direction): Function for writing implementations.
 (write_typed_args_for_direction): Function for writing arguments prefixed with GTypes.
 (write_async_method_client): Write out async version of method.

* glib/dbus-binding-tool-glib.c: Include dbus-gvalue-utils.h.
 (dbus_g_type_get_marshal_name): Move mapping from GType to marshal name into here.
 (dbus_g_type_get_c_name): Move into here.
 (compute_marshall): Convert signature to type with dbus_gtype_from_signature, use dbus_g_type_get_marshal_name.
 (compute_marshall_name): Ditto.

(compute_marshall): Handle async signal annotations.
(gather_marshallers): Return if we don't have a known prefix.
(generate_glue): Collect introspection blob here, and write all of the blob at the end. This allows an object with multiple interfaces to work.
Mark async methods in introspection blob.

* glib/Makefile.am (libdbus_glib_1_la_SOURCES): Add dbus-gtype-specialized.c, dbus-gtype-specialized.h, dbus-gvalue-utils.h, dbus-gvalue-utils.c.

* dbus/dbus-glib.h: Don't include dbus-protocol.h; this avoids people accidentally using DBUS_TYPE_* which should not be necessary anymore.
Do include dbus-gtype-specialized.h, which are utilities for GLib container types.
Add various #defines for types such as DBUS_TYPE_G_BOOLEAN_ARRAY.
(DBusGValueIterator, DBusGValue): Define, not fully used yet.
(dbus_g_value_get_g_type): Type for recursive value.
(dbus_g_value_open, dbus_g_value_iterator_get_value)
(dbus_g_value_iterator_get_values, dbus_g_value_iterator_recurse)
(dbus_g_value_free): Prototypes.
(dbus_g_object_register_marshall, dbus_g_proxy_new_from_proxy): Prototype.
(dbus_g_proxy_set_interface): Prototype.
(dbus_g_proxy_begin_call, dbus_g_proxy_end_call)
(dbus_g_proxy_call_no_reply): Take GLib types instead of Dbus types.
(dbus_g_proxy_get_path, dbus_g_proxy_get_interface): Accessors.
(DBusGAsyncData, DBusGMethodInvocation): Structures for doing async invocations.
(dbus_g_method_return, dbus_g_method_return_error): Prototypes.

* doc/dbus-tutorial.xml: Update GLib section.

* tools/dbus-viewer.c (load_child_nodes): Update for new invocation type of dbus_g_proxy_end_call.
(load_from_service_thread_func): Ditto.

* tools/print-introspect.c (main): Ditto.

* tools/dbus-names-model.c (have_names_notify)
(names_model_reload, names_model_set_connection)
Use GTypes.

* python/Makefile.am (INCLUDES): Define DBUS_COMPILATION, needed since Python bindings use GLib bindings.

* test/glib/Makefile.am (INCLUDES): Define DBUS_COMPILATION.
Add --prefix argument.

* tools/Makefile.am: Define DBUS_COMPILATION. Remove
unneded --ignore-unsupported arg.

* test/glib/test-service-glib.c:
* test/glib/test-service-glib.xml:
* test/glib/test-dbus-glib.c: Add many more tests.

- * dbus/dbus-message-util.c (_dbus_message_test): fix signedness warning
- * glib/dbus-glib-tool.c (main): fix warning
- * glib/dbus-binding-tool-glib.c (generate_glue): fix warning
- * dbus/dbus-connection.c (dbus_connection_read_write_dispatch): add a new function that can be used in simple applications that don't have a main loop and are willing to block

```

commit b34961c0e5a75ff9f70e0ba439a96d993456ef92
Author: David Zeuthen <david@fubar.dk>
Date: 2005-04-06 17:36:47 +0000

2005-04-05 David Zeuthen <davidz@redhat.com>

Fix https://bugs.freedesktop.org/show_bug.cgi?id=2889

- * glib/dbus-gmain.c:
(io_handler_destroy_source): Remove from list of IO handlers of the ConnectionSetup object
(timeout_handler_destroy_source): -do- for timeout handlers
(io_handler_source_finalized): Don't remove from list since we now do that in io_handler_destroy_source(). Renamed from io_handler_source_destroyed
(timeout_handler_source_destroyed): -do- for timeout handlers
(connection_setup_free): It is now safe to iterate over all IO and timeout handlers as the _destroy_source removes them from the list synchronously

```

commit 681e7deee9a01c1f315b0066b87204e0da207d99
Author: Colin Walters <walters@verbum.org>
Date: 2005-03-17 17:48:29 +0000

2005-03-17 Colin Walters <walters@verbum.org>

- * bus/print-introspect.c: Move to tools/.
- * bus/run-with-tmp-session-bus.sh: Ditto.

- * glib/Makefile.am (dbus-glib-bindings.h): Move generation to tools/Makefile.am.
- * test/glib/run-test.sh: Update to handle move of run-with-tmp-session-bus.sh.
- * test/glib/test-service-glib.c: Update to handle move of dbus-glib-bindings.h.
- * tools/print-introspect.c: Moved here from bus/, and ported to GLib bindings.
- * tools/run-with-tmp-session-bus.sh: Moved here from bus/.
- * tools/Makefile.am: Generate dbus-glib-bindings.h and dbus-bus-introspect.xml here.
- * tools/.cvsignore, glib/.cvsignore, bus/.cvsignore: Update.

```
glib/.cvsignore | 1 -  
glib/Makefile.am | 8 -----

```
2005-03-12 Colin Walters <walters@verbum.org>
```

- * bus/driver.c (write_args_for_direction): New function, parses a type signature into arguments and outputs to XML.
(bus_driver_handle_introspect): Use it instead of hardcoding XML for certain signatures.
- * bus/Makefile.am (dbus-bus-introspect.xml): Add dependency on dbus-daemon.
- * glib/dbus-glib-tool.c (main): Parse ignore_unsupported argument, pass it to dbus_binding_tool_output_glib_client.
- * glib/dbus-binding-tool-glib.c
(generate_client_glue): Protect against multiple inclusion.
(dbus_binding_tool_output_glib_client): Add G_BEGIN_DECLS/G_END_DECLS.
- * glib/dbus-binding-tool-glib.c (compute_client_method_name): Change to just take iface prefix directly.
(write_formal_parameters): Clarify error message.
(check_supported_parameters): New function; checks to see type

signatures of method parameters are supported.
(generate_client_glue): Handle ignore_unsupported flag.
(dbus_binding_tool_output_glib_client): Handle ignore_unsupported parameter.

* glib/Makefile.am (dbus-glib-bindings.h): Pass --ignore-unsupported by default until glib bindings support arrays.

```

commit c5247484ea45ef9b6b3449a71e3ea80b86de03ad
Author: Colin Walters <walters@verbum.org>
Date: 2005-03-12 16:33:00 +0000

2005-03-11 Colin Walters <walters@verbum.org>

* glib/Makefile.am: Generate dbus-glib-bindings.h and install it.

* bus/print-introspect.c: New file; prints introspection data for a given name and object path.

* bus/run-with-tmp-session-bus.sh: New file, refactored from test/glib/run-test.sh. Creates a temporary session bus and runs another program.

* test/glib/run-test.sh: Refactor to invoke run-with-tmp-session-bus.sh.

* bus/driver.c (bus_driver_handle_introspect): Fix to print new introspection format. Also change to use DBUS_TYPE_x_AS_STRING macros instead of hardcoding.

* glib/.cvsignore, bus/.cvsignore, test/glib/.cvsignore: Update.

```

commit 10dc75239d071c49622972d061ff7546ed169bc5
Author: Colin Walters <walters@verbum.org>
Date: 2005-03-09 17:09:11 +0000

2005-03-09 Colin Walters <walters@verbum.org>

* glib/dbus-gproxy.c (dbus_g_proxy_invoke): New method; calls

to this are generated for client-side wrappers. Invokes a D-BUS method and returns reply values.

* glib/dbus-binding-tool-glib.c (write_args_sig_for_direction):
New
function; writes signature string for argument direction.
(write_args_for_direction): Change to pass input values directly
instead of via address, and fix indentation.
(generate_client_glue): Change to invoke dbus_g_proxy_invoke.
Also
make generated wrappers inlineable.

* dbus/dbus-message.c (dbus_message_iter_get_fixed_array): Add
note about using dbus_type_is_fixed.

* dbus/dbus-marshall-basic.c (_dbus_type_is_fixed): Moved to
dbus/dbus-signature.c as dbus_type_is_fixed.

All callers updated.

* dbus/dbus-signature.c (dbus_type_is_fixed): Moved here
from dbus/dbus-marshall-basic.c:_dbus_type_is_fixed.

* dbus/dbus-signature.h: Prototype.

* glib/dbus-binding-tool-glib.c (compute_marshall_name): Fix
error printf code.

* test/glib/test-dbus-glib.c (main): Be sure to clear error as
appropriate instead of just freeing it.
(main): Free returned strings using g_free.

* test/glib/Makefile.am (test-service-glib-glue.h)
(test-service-glib-bindings.h): Add dependency on
dbus-binding-tool.

* glib/dbus-gvalue.c (MAP_BASIC): Refactored from MAP_BASIC_INIT;
simply maps a simple D-BUS type to GType.
(dbus_dbus_type_to_gtype): Function which maps D-BUS type to
GType.
(dbus_gvalue_init): Just invoke dbus_dbus_type_to_gtype and
initialize the value with it.
(dbus_gvalue_binding_type_from_type): Unused, delete.
(dbus_gvalue_demarshal): Switch to hardcoding demarshalling for
various types instead of unmarshalling to value data directly.
Remove can_convert boolean.
(dbus_gvalue_marshal): Remove duplicate initialization; switch to
returning directly instead of using can_convert boolean.
(dbus_gvalue_store): New function; not related to D-BUS per-se.
Stores a GValue in a pointer to a value of its corresponding C
type.

* glib/dbus-gvalue.h: Remove dbus_gvalue_binding_type_from_type,
add dbus_gvalue_store.

commit be6ef9488ddc1b9fd3fc303cccf6e6618450be89
Author: Colin Walters <walters@verbum.org>
Date: 2005-02-27 17:38:12 +0000

2005-02-27 Colin Walters <walters@verbum.org>

* glib/dbus-gidl.c (property_info_get_type, arg_info_get_type):
Change return value to const char * instead of int so we can do
full signatures.

(struct PropertyInfo, struct ArgInfo): Store char *.
(property_info_new, arg_info_new): Update parameters, strdup.
(property_info_unref, arg_info_unref): Free.

* glib/dbus-gidl.h: Update prototypes.

* glib/dbus-gparser.c (basic_type_from_string): Delete.
(validate_signature): New function, just validates signature and
sets GError.

(parse_property, parse_arg): Invoke validate_signature. Store
signature instead of just type code.

* glib/dbus-gvalue.c (base_type_from_signature): New utility
function to return a primary type for a signature, dropping
information about types in container types.

```

(dbus_gvalue_genmarshal_name_from_type)
(dbus_gvalue_binding_type_from_type)
(dbus_gvalue_ctype_from_type): Update to take full signature
instead of type code.
(dbus_gtype_to_dbus_type): Moved here from glib/dbus-gobject.c.

* glib/dbus-gvalue.h: Update prototypes for above.

* glib/dbus-gobject.c (gtype_to_dbus_type): Moved to
glib/dbus-gvalue.c as dbus_gtype_to_dbus_type.
(introspect_properties, introspect_signals, write_interface):
Update to handle signatures, and remove usage of
_dbus_gutils_type_to_string.
(handle_introspect): Print out type codes instead of e.g.
"string"
in hardcoded introspection XML; also use x_AS_STRING constants
instead of hardcoding in string.

* glib/dbus-glib-tool.c (pretty_print): Handle signature change
to string. Remove usage of _dbus_gutils_type_to_string.

* glib/dbus-gutils.c (_dbus_gutils_type_to_string): Delete.

* glib/dbus-gutils.h (_dbus_gutils_type_to_string): Update for
deletion.

* glib/dbus-binding-tool-glib.c (compute_marshall)
(compute_marshall_name, generate_glue): Handle signature change
to string.
(write_formal_parameters, write_args_for_direction): Ditto, and
remove FIXME.

* tools/dbus-tree-view.c (type_to_string): Delete.
(info_set_func_text): Update to print full signatures.

* test/glib/test-service-glib.xml: Change types to new
introspection format.

```

```

* glib/dbus-binding-tool-glib.c
(dbus_binding_tool_output_glib_server): Fix iochannel
refcounting.

* glib/dbus-glib-tool.c: Include dbus-glib-tool.h, as well
as errno.h and sys/stat.h.
(lose): New function, prints error with
newline and exits.
(lose_gerror): Similar, but takes GError for message.
(main): Add --output argument to specify output file to write to,
instead of always printing to stdout. In this mode, determine
timestamps on source files to see whether any are newer than the
target file. If not, exit. Also convert a number of error
messages to use lose (since it's shorter), and switch to using
g_io_channel_shutdown.

commit 87e81b87d7b443142302ecb48e46191a443ae02a
Author: Colin Walters <walters@verbum.org>
Date: 2005-02-17 17:41:24 +0000

2005-02-17 Colin Walters <walters@verbum.org>

This patch is based on initial work from
Paul Kuliniewicz <kuliniew@purdue.edu>.

* glib/dbus-gvalue.c (dbus_gvalue_init): New function; move initialization of GValue from dbus type to here.
(dbus_gvalue_genmarshal_name_from_type): New function; generates a string for the "glib-genmarshal" program from a DBus type.
(dbus_gvalue_binding_type_from_type): New function; turns a DBus type into the C name for it we use in the glib bindings.
(dbus_gvalue_ctype_from_type): New function; maps a DBus type into a glib C type (not GValue).
(dbus_gvalue_demarshal): invoke dbus_gvalue_init.

* glib/dbus-gutils.c (_dbus_gutils_wincaps_to_uscore): Moved here from dbus-gobject.c.

* glib/dbus-gutils.h: Prototype it.

* glib/dbus-gproxy.c: Include new dbus-gobject.h.
(marshal_dbus_message_to_g_marshall): Use new shared function dbus_glib_marshal_dbus_message_to_gvalue_array.

* glib/dbus-gparser.c (parse_interface, parse_method): Handle c_name attribute.
Will be changed once we have annotations.

* glib/dbus-gobject.c: Change info_hash_mutex from GStaticMutex
to
GStaticRWLock. Callers updated.
(wincaps_to_uscore): Move to dbus-gutils.c. Callers updated.
(string_table_next): New function for iterating over
zero-terminated
string value array.
(string_table_lookup): New function; retrieves specific entry in
array.
(get_method_data): New function; look up method data in object
data chunk.
(object_error_domain_prefix_from_object_info)
(object_error_code_from_object_info): New functions, but not
implemented yet.
(method_interface_from_object_info): New function; retrieve
interface name.
(method_name_from_object_info): New function; retrieve method
name.
(method_arg_info_from_object_info): New function; retrieve
argument data.
(arg_iterate): New function; iterates over serialized argument
data.
(method_dir_signature_from_object_info): New function; returns a
GString holding type signature for arguments for just one
direction (input or output).
(method_input_signature_from_object_info)
(method_output_signature_from_object_info): New functions.
(dbus_glib_marshall_dbus_message_to_gvalue_array): New shared
function;
converts dbus message arguments into a GValue array. Used for
both
signal handling and method invocation.
(struct DBusGlibWriteInterfaceData): New utility structure.
(write_interface): New function; generate introspection XML for
an interface.
(introspect_interfaces): New function; gathers all
interface->methods,
generates introspection XML for them.
(handle_introspect): Invoke introspect_interfaces.
(get_object_property): Be sure to zero-initialize stack-allocated
GValue.
(lookup_object_and_method): New function; examines an incoming
message
and attempts to match it up (via interface, method name,
and argument
signature) with a known object and method.
(gerror_domaincode_to_dbus_error_name): New function; converts a
GError domain and code into a DBus error name. Needs GError
data
added to object introspection to work well.
(gerror_to_dbus_error_message): Creates a DBusMessage error
return from

GError.
 (invoke_object_method): New function to invoke an object method looked up via lookup_object_and_method. Parses the incoming message, turns it into a GValue array, then invokes the marshaller specified in the DBusGMethodInfo. Creates a new message with either return values or error message as appropriate.
 (gobject_message_function): Invoke lookup_object_and_method and invoke_object_method.

* glib/dbus-glib-tool.c: Include dbus-binding-tool-glib.h.
 (enum DBusBindingOutputMode): New enum for binding output modes.
 (pretty_print): Print binding names.
 (dbus_binding_tool_error_quark): GError bits.
 (version): Fix typo.
 (main): Create GIOChannel for output. Parse new --mode argument, possible values are "pretty-print", "glib-server", "glib-client". Use mode to invoke appropriate function.

* glib/dbus-gobject.h: Prototype
 dbus_glib_marshall_dbus_message_to_gvalue_array.

* glib/dbus-glib-tool.h: New header, just includes GError bits for now.

* glib/dbus-gidl.c (struct InterfaceInfo): Add bindings hashtable;
 maps binding style to name.
 (struct MethodInfo): Ditto.
 (get_hash_keys, get_hash_key): Utility function, returns keys for a GHashTable.
 (interface_info_new, method_info_new): Initialize bindings.
 (interface_info_unref, method_info_unref): Destroy bindings.
 (method_info_get_binding_names, method_info_get_binding_name)
 (interface_info_get_binding_names,
 interface_info_get_binding_name):
 Functions for retrieving binding names.
 (method_info_set_binding_name, interface_info_set_binding_name):
 Functions for setting binding names.

* glib/dbus-binding-tool-glib.h: New file, has prototypes for glib binding generation.

* glib/dbus-binding-tool-glib.c: New file, implements server-side and client-side glib glue generation.

* glib/Makefile.am (dbus_binding_tool_SOURCES): Add
 dbus-binding-tool-glib.c, dbus-binding-tool-glib.h,
 dbus-glib-tool.h.

* dbus/dbus-glib.h (struct DBusGMethodMarshaller): Remove in favor

of using GClosureMarshal directly.
(struct DBusGObjectInfo): Add n_infos member.

* test/glib/test-service-glib.xml: New file; contains introspection data for MyTestObject used in test-service-glib.c.

* test/glib/test-service-glib.c (enum MyObjectError): New GError enum.
(my_object_do_nothing, my_object_increment, my_object_throw_error)
(my_object_uppercase, my_object_many_args): New test methods.
(main): Use dbus_g_object_class_install_info to include generated object info.

* test/glib/Makefile.am: Generate server-side glue for test-service-glib.c, as well as client-side bindings.

* test/glib/test-dbus-glib.c: Include test-service-glib-bindings.h.
(main): Activate TestSuiteGLibService; test invoke a bunch of its methods using both the dbus_gproxy stuff directly as well as the generated bindings.

commit dd22216537d98b06366ade81eb6f63621d4c6379
Author: Havoc Pennington <hp@redhat.com>
Date: 2005-02-16 04:37:27 +0000

2005-02-15 Havoc Pennington <hp@redhat.com>

* dbus/dbus-connection.c (dbus_connection_dispatch): always

complete a pending call, don't run filters first.

* glib/dbus-gproxy.c (dbus_g_proxy_end_call): change to use
dbus_pending_call_steal_reply

* dbus/dbus-pending-call.c (dbus_pending_call_block): just call
_dbus_connection_block_pending_call
(dbus_pending_call_get_reply): change to steal_reply and return a
ref

* dbus/dbus-connection.c
(dbus_connection_send_with_reply_and_block): port to work in
terms
of DBusPendingCall
(_dbus_connection_block_pending_call): replace block_for_reply
with this

Date: 2005-01-30 05:18:44 +0000

2005-01-30 Havoc Pennington <hp@redhat.com>

dbus-viewer introspected and displayed the bus driver

* dbus/dbus-object-tree.c
(object_tree_test_iteration): add tests for a handler registered on "/"

* dbus/dbus-object-tree.c
(_dbus_decompose_path): fix to handle path "/" properly
(run_decompose_tests): add tests for path decomposition

* glib/dbus-gutils.c (_dbus_gutils_split_path): fix to handle "/" properly

* glib/dbus-gobject.c (handle_introspect): fix quotes

* test/glib/run-test.sh: support launching the bus, then running dbus-viewer

* test/glib/test-service-glib.c (main): put in a trivial gobject subclass and register it on the connection

* bus/driver.c (bus_driver_handle_introspect): implement introspection of the bus driver service

* dbus/dbus-protocol.h: add #defines for the XML namespace,

identifiers, doctype decl

* bus/driver.c (bus_driver_handle_get_service_owner): handle attempts to get owner of DBUS_SERVICE_ORG_FREEDESKTOP_DBUS by returning the service unchanged.
(bus_driver_handle_message): remove old check for reply_serial in method calls, now the message type deals with that
(bus_driver_handle_message): handle NULL interface

* glib/dbus-gproxy.c (dbus_g_proxy_get_bus_name): new function

* glib/dbus-gloader-expat.c (description_load_from_string): allow -1 for len

* tools/dbus-viewer.c: add support for introspecting a service on a bus

* glib/dbus-gproxy.c (dbus_g_pending_call_ref): add
(dbus_g_pending_call_unref): add

```

```

```
* Land the new message args API and type system.
```

```
This patch is huge, but the public API change is not
really large. The set of D-BUS types has changed somewhat,
and the arg "getters" are more geared toward language bindings;
they don't make a copy, etc.
```

```
There are also some known issues. See these emails for details
on this huge patch:
http://lists.freedesktop.org/archives/dbus/2004-December/001836.html
http://lists.freedesktop.org/archives/dbus/2005-January/001922.html
```

```
* dbus/dbus-marshal-*: all the new stuff
```

```

* dbus/dbus-message.c: basically rewritten

* dbus/dbus-memory.c (check_guards): with "guards" enabled, init
freed blocks to be all non-nul bytes so using freed memory is
less
likely to work right

* dbus/dbus-internals.c (_dbus_test_oom_handling): add
DBUS_FAIL_MALLOC=N environment variable, so you can do
DBUS_FAIL_MALLOC=0 to skip the out-of-memory checking, or
DBUS_FAIL_MALLOC=10 to make it really, really, really slow and
thorough.

* qt/message.cpp: port to the new message args API
(operator<<): use str.utf8() rather than str.unicode()
(pretty sure this is right from the Qt docs?)

* glib/dbus-gvalue.c: port to the new message args API

* bus/dispatch.c, bus/driver.c: port to the new message args API

* dbus/dbus-string.c (_dbus_string_init_const_len): initialize
the
"locked" flag to TRUE and align_offset to 0; I guess we never
looked at these anyhow, but seems cleaner.

* dbus/dbus-string.h (_DBUS_STRING_ALLOCATION_PADDING):
move allocation padding macro to this header; use it to implement
(_DBUS_STRING_STATIC): ability to declare a static string.

* dbus/dbus-message.c (_dbus_message_has_type_interface_member):
change to return TRUE if the interface is not set.

* dbus/dbus-string.[hc]: move the D-BUS specific validation stuff
to dbus-marshal-validate.[hc]

* dbus/dbus-marshal-basic.c (_dbus_type_to_string): move here
from
dbus-internals.c

* dbus/Makefile.am: cut over from dbus-marshal.[hc]
to dbus-marshal-*. [hc]

* dbus/dbus-object-tree.c (_dbus_decompose_path): move this
function here from dbus-marshal.c

commit 62f29fd0fea8e1eaa3e61db44ddd1eeba765f153
Author: Havoc Pennington <hp@redhat.com>
Date: 2004-11-13 07:07:46 +0000

2004-11-13 Havoc Pennington <hp@redhat.com>

- * test/glib/test-profile.c: fix this thing up a bit
- * dbus/dbus-message.c (dbus_message_new_empty_header): increase preallocation sizes by a fair bit; not sure if this will be an overall performance win or not, but it does reduce reallocs.
- * dbus/dbus-string.c (set_length, reallocate_for_length): ignore the test hack that forced constant realloc if asserts are disabled, so we can profile sanely. Sprinkle in some `_DBUS_UNLIKELY()` which are probably pointless, but before I noticed the real performance problem I put them in.
(`_dbus_string_validate_utf8`): micro-optimize this thing a little bit, though callgrind says it didn't help; then special-case `ascii`, which did help a lot; then be sure we detect nul bytes as invalid, which is a bugfix.
(`align_length_then_lengthen`): add some more `_DBUS_UNLIKELY` superstition; use `memset` to nul the padding instead of a manual loop.
(`_dbus_string_get_length`): inline this as a macro; it showed up in the profile because it's used for loop tests and so forth

- * dbus/dbus-sysdeps.c (`_dbus_file_get_contents`): fix an incorrect format string.
- * glib/dbus-dbus-gmain.c (`dbus_g_bus_get`): do not mangle NULL pointer
(bug #1540, Leonardo Boiko).

commit 301a3547a2efd9784fa3ab253373fa689c9bd1c3
Author: Olivier Andrieu <oliv__a@users.sourceforge.net>
Date: 2004-07-29 08:00:45 +0000
```

* bus/config-loader-libxml.c: complete the implementation of libxml

backend for config file loader. Doesn't work with full OOM test yet.

* configure.in: change error when selecting libxml into a warning.

* test/data/invalid-config-files: add two non-well-formed XML files.

* glib/Makefile.am: libdbus_gtool always uses expat, not libxml.

* dbus/dbus-transport-unix.c (unix_handle_watch): do not disconnect in case of DBUS_WATCH_HANGUP, several do_reading() may be necessary to read all the buffer. (bug #894)

* bus/activation.c (bus_activation_activate_service): fix a potential assertion failure (bug #896). Small optimization in the case of auto-activation messages.

* dbus/dbus-message.c (verify_test_message, _dbus_message_test): add

test case for byte-through-vararg bug (#901). patch by Kimmo Hämäläinen.

commit ef7e145899ce58a5df564127783f014d8bed233f
Author: Havoc Pennington <hp@redhat.com>
Date: 2004-06-20 15:28:14 +0000

2004-06-20 Havoc Pennington <hp@redhat.com>

* dbus/dbus-glib-error-enum.h: autogenerate the GError enum codes from the dbus error names

* glib/dbus-glib.h: move to subdir dbus/ since it's included as dbus/dbus-glib.h and that breakage is now visible due to including dbus/dbus-glib.h in dbus-glib-lowlevel.h

* glib/dbus-glib.h: s/gproxy/g_proxy/

* dbus/dbus-shared.h: new header to hold stuff shared with binding APIs

* dbus/dbus-protocol.h (DBUS_ERROR_*): move errors here rather than dbus-errors.h

* glib/dbus-glib.h (dbus_set_g_error): move to dbus-glib-lowlevel.h

* glib/dbus-glib.h: remove dbus/dbus.h from here; change a bunch of stuff to enable this

* dbus/dbus-glib-lowlevel.h: put dbus/dbus.h here

* a bunch of other changes with the same basic "separate glib bindings from dbus.h" theme

```

```

2003-10-20 Havoc Pennington <hp@redhat.com>

hmm, make check is currently not passing.

- * doc/dbus-specification.xml: add requirement that custom type names follow the same rules as interface names.

- * dbus/dbus-protocol.h: change some of the byte codes, to avoid

duplication and allow 'c' to be 'custom'; dict is now 'm' for 'map'

to * doc/dbus-specification.xml: update type codes to match dbus-protocol.h, using the ASCII byte values. Rename type NAMED CUSTOM. Add type OBJECT_PATH to the spec.

2003-10-17 Havoc Pennington <hp@redhat.com>

* bus/driver.c (create_unique_client_name): use "." as separator in base service names instead of '-'

* dbus/dbus-string.c (_dbus_string_get_byte): allow getting nul byte at the end of the string

* dbus/dbus-internals.h (_DBUS_LIKELY, _DBUS_UNLIKELY): add optimization macros since string validation seems to be a slow point.

* doc/dbus-specification.xml: restrict valid service/interface/member/error names. Add test suite code for the name validation.

* dbus/dbus-string.c: limit service/interface/member/error names to [0-9][A-Z][a-z]_

* dbus/dbus-connection.c (dbus_connection_dispatch): add missing format arg to verbose spew

* glib/dbus-gproxy.c (dbus_gproxy_call_no_reply): if not out of memory, return instead of g_error

* test/test-service.c (path_message_func): support emitting a signal on request

* dbus/dbus-bus.c (init_connections_unlocked): only fill in activation bus type if DBUS_BUS_ACTIVATION was set; default to assuming the activation bus was the session bus so that services started manually will still register.
(init_connections_unlocked): fix so that in OOM situation we get the same semantics when retrying the function

* test/test-service.c (main): change to use path registration, to test those codepaths; register with DBUS_BUS_ACTIVATION rather than DBUS_BUS_SESSION

2003-10-16 Havoc Pennington <hp@redhat.com>

- * bus/connection.c (bus_pending_reply_expired): either cancel or execute, not both (bus_connections_check_reply): use unlink, not remove_link, as we don't want to free the link; fixes double free mess
- * dbus/dbus-pending-call.c (dbus_pending_call_block): fix in case where no reply was received
- * dbus/dbus-connection.c (_dbus_pending_call_complete_and_unlock): fix a refcount leak
- * bus/signals.c (match_rule_matches): add special cases for the bus driver, so you can match on sender/destination for it.
- * dbus/dbus-sysdeps.c (_dbus_abort): print backtrace if DBUS_PRINT_BACKTRACE is set
- * dbus/dbus-internals.c: add pid to assertion failure messages
- * dbus/dbus-connection.c: add message type code to the debug spew
- * glib/dbus-gproxy.c (gproxy_get_match_rule): match rules want sender=foo not service=foo
- * dbus/dbus-bus.c (dbus_bus_get): if the activation bus is the session bus but DBUS_SESSION_BUS_ADDRESS isn't set, use DBUS_ACTIVATION_ADDRESS instead
- * bus/activation.c: set DBUS_SESSION_BUS_ADDRESS, DBUS_SYSTEM_BUS_ADDRESS if appropriate

* bus/bus.c (bus_context_new): handle OOM copying bus type into context struct

* dbus/dbus-message.c (dbus_message_iter_get_object_path): new function
(dbus_message_iter_get_object_path_array): new function (half finished, disabled for the moment)

* glib/dbus-gproxy.c (dbus_gproxy_end_call): properly handle DBUS_MESSAGE_TYPE_ERROR

* tools/dbus-launch.c (babysit): support DBUS_DEBUG_OUTPUT to avoid redirecting stderr to /dev/null
(babysit): close stdin if not doing the "exit_with_session" thing

* dbus/dbus-sysdeps.c (_dbus_become_daemon): delete some leftover debug code; change DBUS_DEBUG_OUTPUT to only enable stderr, not stdout/stdin, so things don't get confused

* bus/system.conf.in: fix to allow replies, I modified .conf instead of .conf.in again.

glib/dbus-gproxy.c | 26 ++++++-----
1 file changed, 20 insertions(+), 6 deletions(-)

commit 33689cc9f76ff14f77ba9b9d6e17094991fc2ba1
Author: Havoc Pennington <hp@redhat.com>
Date: 2003-10-12 05:59:39 +0000

2003-10-12 Havoc Pennington <hp@pobox.com>

Added test code that 1) starts an actual bus daemon and
2) uses
DBusGProxy; fixed bugs that were revealed by the test. Lots
more testing possible, but this is the basic framework.

* glib/dbus-gproxy.c (dbus_gproxy_manager_unregister): remove empty proxy lists from the proxy list hash

* dbus/dbus-message.c (dbus_message_iter_get_args_valist): add a couple of return_if_fail checks

* dbus/dbus-pending-call.c (_dbus_pending_call_new): use
dbus_new0
to allocate, so everything is cleared to NULL as it should be.

* glib/dbus-gmain.c (dbus_connection_setup_with_g_main): pass source as data to dbus_connection_set_timeout_functions() as the timeout functions expected

```
* test/glib/run-test.sh: add a little script to start up a
message
bus and run tests using it

* tools/dbus-launch.1: updates

* tools/dbus-launch.c (main): add --config-file option

* tools/dbus-launch.c (main): remove confusing else if (runprog)
that could never be reached.

* dbus/dbus-message.c (dbus_message_new_method_return)
(dbus_message_new_error, dbus_message_new_signal): set the
no-reply-expected flag on all these. Redundant, but may
as well be consistent.
```

2003-09-28 Havoc Pennington <hp@pobox.com>

- * HACKING: update to reflect new server

2003-09-26 Seth Nickell <seth@gnome.org>

- * python/dbus.py:
- * python/examples/example-signals.py:

Start implementing some notions of signals. The API is really terrible, but they sort of work (with the exception of being able to filter by service, and to transmit signals *as* a particular service). Need to figure out how to make messages come from the service we registered :-(

- * python/dbus_bindings.pyx.in:

Removed duplicate message_handler callbacks.

2003-09-25 Havoc Pennington <hp@redhat.com>

- * bus/session.conf.in: fix my mess

2003-09-25 Havoc Pennington <hp@pobox.com>

- * bus/session.conf.in: fix security policy, reported by Seth Nickell

2003-09-25 Seth Nickell <seth@gnome.org>

- * python/examples/example-service.py:

Johan notices complete wrong code in example-service, but completely wrong in a way that works exactly the same (!). Johan is confused, how could this possibly work? Example code fails to serve purpose of making things clear. Seth fixes.

2003-09-25 Mark McLoughlin <mark@skynet.ie>

- * doc/dbus-specification.sgml: don't require header fields to be 4-byte aligned and specify that fields should be distinguished from padding by the fact that zero is not a valid field name.

- * doc/TODO: remove re-alignment item and add item to doc the OBJECT_PATH type.

- * dbus/dbus-message.c:
(HeaderField): rename the original member to value_offset and introduce a name_offset member to keep track of where

the field actually begins.
(adjust_field_offsets): remove.
(append_int_field), (append_uint_field),
(append_string_field): don't align the start of the header field to a 4-byte boundary.
(get_next_field): impl finding the next marshalled field after a given field.
(re_align_field_recurse): impl re-aligning a number of already marshalled fields.
(delete_field): impl deleting a field of any type and re-aligning any following fields.
(delete_int_or_uint_field), (delete_string_field): remove.
(set_int_field), (set_uint_field): no need to re-check that we have the correct type for the field.
(set_string_field): ditto and impl re-aligning any following fields.
(decode_header_data): update to take into account that the fields aren't 4-byte aligned any more and the new way to distinguish padding from header fields. Also, don't exit when there is too much header padding.
(process_test_subdir): print the directory.
(_dbus_message_test): add test to make sure a following field is re-aligned correctly after field deletion.

* dbus/dbus-string.[ch]:
(_dbus_string_insert_bytes): rename from insert_byte and allow the insert of multiple bytes.
(_dbus_string_test): test inserting multiple bytes.

* dbus/dbus-marshal.c: (_dbus_marshal_set_string): add warning note to docs about having to re-align any marshalled values following the string.

* dbus/dbus-message-builder.c:
(append_string_field), (_dbus_message_data_load): don't align the header field.

* dbus/dbus-auth.c: (process_test_subdir): print the directory.

* test/break-loader.c: (randomly_add_one_byte): upd. for insert_byte change.

* test/data/invalid-messages/bad-header-field-alignment.message: new test case.

* test/data/valid-messages/unknown-header-field.message: shove a dict in the unknown field.

2003-09-25 Seth Nickell <seth@gnome.org>

* python/dbus.py:

* python/dbus_bindings.pyx.in:

Handle return values.

* python/examples/example-client.py:

* python/examples/example-service.py:

Pass back return values from the service to the client.

2003-09-24 Seth Nickell <seth@gnome.org>

* python/dbus.py:

pass Connect Object methods (when you are sharing an object) up...

in a list of methods to be shared. Sharing all the methods just worked out too weird. You can now create nice Services over the DBus in Python. :-)

* python/dbus_bindings.pyx.in:

Keep references to user_data tuples passed into C functions so Python doesn't garbage collect on us.

Implement MethodReturn and Error subclasses of Message for creating DBusMessage's of those types.

* python/examples/example-client.py:

* python/examples/example-service.py:

Simple example code showing both how create DBus services and objects, and how to use them.

2003-09-23 Havoc Pennington <hp@pobox.com>

* glib/dbus-gproxy.c (dbus_gproxy_manager_filter): implement

2003-09-23 Havoc Pennington <hp@redhat.com>

* glib/dbus-gproxy.c (dbus_gproxy_connect_signal): implement
(dbus_gproxy_disconnect_signal): implement
(dbus_gproxy_manager_remove_signal_match): implement
(dbus_gproxy_manager_add_signal_match): implement
(dbus_gproxy_oneway_call): implement

2003-09-23 Havoc Pennington <hp@pobox.com>

* glib/dbus-gproxy.c (struct DBusGProxy): convert to a GObject subclass. This means dropping the transparent thread safety of the

proxy; you now need a separate proxy per-thread, or your own locking on the proxy. Probably right anyway.
(dbus_gproxy_ref, dbus_gproxy_unref): nuke, just use g_object_ref

2003-09-22 Havoc Pennington <hp@redhat.com>

* glib/dbus-gproxy.c (dbus_gproxy_manager_get): implement

2003-09-21 Seth Nickell <seth@gnome.org>

First checkin of the Python bindings.

* python/.cvsignore:
* python/Makefile.am:
* python/dbus_bindings.pyx.in:
* python/dbus_h_wrapper.h:

Pieces for Pyrex to operate on, building a dbus_bindings.so python module for low-level access to the DBus APIs.

* python/dbus.py:

High-level Python module for accessing DBus objects.

* configure.in:
* Makefile.am:

Build stuff for the python bindings.

* acinclude.m4:

Extra macro needed for finding the Python C header files.

2003-09-21 Havoc Pennington <hp@pobox.com>

* glib/dbus-gproxy.c (dbus_gproxy_manager_new): start implementing the proxy manager, didn't get very far.

* dbus/dbus-bus.c (dbus_bus_add_match): new
(dbus_bus_remove_match): new

* glib/dbus-gproxy.c (dbus_gproxy_new_for_service): add a path_name argument; adjust the other not-yet-implemented gproxy constructors to be what I think they should be.

2003-09-21 Havoc Pennington <hp@pobox.com>

* dbus/dbus-bus.c (dbus_bus_get): set exit_on_disconnect to TRUE by default for message bus connections.

* dbus/dbus-connection.c (dbus_connection_dispatch): exit if exit_on_disconnect flag is set and we process the disconnected

signal.
(dbus_connection_set_exit_on_disconnect): new function

2003-09-21 Havoc Pennington <hp@pobox.com>

Get matching rules mostly working in the bus; only actually parsing the rule text remains. However, the client side of "signal connections" hasn't been started, this patch is only the bus side.

* dbus/dispatch.c: fix for the matching rules changes

* bus/driver.c (bus_driver_handle_remove_match)
(bus_driver_handle_add_match): send an ack reply from these method calls

* glib/dbus-gproxy.c (dbus_gproxy_begin_call): fix order of arguments, reported by Seth Nickell

* bus/config-parser.c (append_rule_from_element): support eavesdrop=true|false attribute on policies so match rules can be prevented from snooping on the system bus.

* bus/dbus-daemon-1.1.in: consistently use terminology "sender" and "destination" in attribute names; fix some docs bugs; add eavesdrop=true|false attribute

* bus/driver.c (bus_driver_handle_add_match)
(bus_driver_handle_remove_match): handle AddMatch, RemoveMatch messages

* dbus/dbus-protocol.h (DBUS_SERVICE_ORG_FREEDESKTOP_BROADCAST):
get
rid of broadcast service concept, signals are just always
broadcast

* bus/signals.c, bus/dispatch.c, bus/connection.c, bus/bus.c:
mostly implement matching rules stuff (currently only exposed
as signal
connections)

2003-09-21 Mark McLoughlin <mark@skynet.ie>

* doc/dbus-specification.sgml: Change the header field name to be an enum and update the rest of the spec to reference the fields using the conventional name.

* dbus/dbus-protocol.h: update to reflect the spec.

* doc/TODO: add item to remove the 4 byte alignment requirement.

* dbus/dbus-message.c: Remove the code to generalise the

header/body length and serial number header fields as named header fields so we can reference field names using the protocol values.

(append_int_field), (append_uint_field), (append_string_field): Append the field name as a byte rather than four chars.

(delete_int_or_uint_field), (delete_string_field): reflect the fact that the field name and typecode now occupy 4 bytes instead of 8.

(decode_string_field), (decode_header_data): update to reflect protocol changes and move the field specific encoding from decode_string_field() back into decode_header_data().

* dbus/dbus-internals.[ch]: (_dbus_header_field_to_string): Add utility to aid debugging.

* dbus/dbus-message-builder.c:
(append_string_field), (_dbus_message_data_load): Update to reflect protocol changes; Change the FIELD_NAME directive to HEADER_FIELD and allow it to take the field's conventional name rather than the actual value.

* test/data/*/*.message: Update to use HEADER_FIELD instead of FIELD_NAME; Always align the header on an 8 byte boundary *before* updating the header length.

2003-09-15 Havoc Pennington <hp@pobox.com>

* dbus/dbus-pending-call.c: add the get/set object data boilerplate as for DBusConnection, etc. Use generic object data for the notify callback.

* glib/dbus-gparser.c (parse_node): parse child nodes

* tools/dbus-viewer.c: more hacking on the dbus-viewer

* glib/dbus-gutils.c (_dbus_gutils_split_path): add a file to contain functions shared between the convenience lib and the installed lib

* glib/Makefile.am (libdbus_glib_1_la_LDFLAGS): add -export-symbols-regex to the GLib library

* dbus/dbus-object-tree.c
(_dbus_object_tree_dispatch_and_unlock):
fix the locking in here, and add a default handler for Introspect() that just returns sub-nodes.

2003-09-14 Havoc Pennington <hp@pobox.com>

* glib/dbus-gthread.c (dbus_g_thread_init): rename to make g_foo rather than gfoo consistent

* glib/dbus-gproxy.h: delete for now, move contents to dbus-glib.h, because the include files don't work right since we aren't in the dbus/ subdir.

* glib/dbus-gproxy.c (dbus_gproxy_send): finish implementing
(dbus_gproxy_end_call): finish
(dbus_gproxy_begin_call): finish

* glib/dbus-gmain.c (dbus_set_g_error): new

* glib/dbus-gobject.c (handle_introspect): include information about child nodes in the introspection

* dbus/dbus-connection.c (dbus_connection_list_registered): new function to help in implementation of introspection

* dbus/dbus-object-tree.c
(_dbus_object_tree_list_registered_and_unlock): new function

2003-09-12 Havoc Pennington <hp@pobox.com>

* glib/dbus-gidl.h: add common base class for all the foo_info types

* tools/dbus-viewer.c: add GTK-based introspection UI thingy similar to kdcop

* test/Makefile.am: try test srcdir -ef . in addition to test srcdir = ., one of them should work (yeah lame)

* glib/Makefile.am: build the "idl" parser stuff as a convenience library

* glib/dbus-gparser.h: make description_load routines return NodeInfo* not Parser*

* Makefile.am (SUBDIRS): build test dir after all library dirs

* configure.in: add GTK+ detection

2003-09-07 Havoc Pennington <hp@pobox.com>

* Make Doxygen contented.

2003-09-07 Havoc Pennington <hp@pobox.com>

* doc/dbus-specification.sgml: more updates

2003-09-06 Havoc Pennington <hp@pobox.com>

* doc/dbus-specification.sgml: partial updates

* bus/dbus-daemon-1.1.in: fix the config file docs for the zillionth time; hopefully I edited the right file this time.

* bus/config-parser.c (append_rule_from_element): support send_type, send_path, receive_type, receive_path

* bus/policy.c: add message type and path to the list of things that can be "firewalled"

2003-09-06 Havoc Pennington <hp@pobox.com>

* dbus/dbus-connection.c (dbus_connection_register_fallback): add this
(dbus_connection_register_object_path): make this not handle messages to paths below the given path

2003-09-03 Havoc Pennington <hp@pobox.com>

* test/glib/Makefile.am: add this with random glib-linked test programs

* glib/Makefile.am: remove the random test programs from here, leave only the unit tests

* glib/dbus-gobject.c (_dbus_gobject_test): add test for uscore/javacaps conversion, and fix
(get_object_property, set_object_property): change to .NET convention for mapping props to methods, set_FooBar/get_FooBar, since one language has such a convention we may as well copy it. Plus real methods in either getFooBar or get_foo_bar style won't collide with this convention.

2003-09-01 Havoc Pennington <hp@pobox.com>

* glib/dbus-gparser.c: implement

* glib/dbus-gobject.c: start implementing skeletons support

* configure.in: when disabling checks/assert, also define G_DISABLE_ASSERT and G_DISABLE_CHECKS

2003-09-01 Havoc Pennington <hp@pobox.com>

* glib/Makefile.am: rearrange a bunch of files and get "make check" framework set up

2003-08-31 Havoc Pennington <hp@pobox.com>

* fix build with --disable-tests

2003-08-30 Havoc Pennington <hp@pobox.com>

* dbus/dbus-connection.c: purge DbusMessageHandler

* dbus/dbus-message-handler.c: remove DbusMessageHandler, just use callbacks everywhere

2003-08-30 Havoc Pennington <hp@pobox.com>

* test/data/valid-config-files/system.d/test.conf: change to root for the user so warnings don't get printed

* dbus/dbus-message.c: add dbus_message_get_path, dbus_message_set_path

* dbus/dbus-object-tree.c (do_test_dispatch): add test of dispatching to a path

* dbus/dbus-string.c (_dbus_string_validate_path): add

* dbus/dbus-marshal.c (_dbus_demarshal_object_path): implement (_dbus_marshall_object_path): implement

* dbus/dbus-protocol.h (DBUS_HEADER_FIELD_PATH): new header field to contain the path to the target object
(DBUS_HEADER_FIELD_SENDER_SERVICE): rename DBUS_HEADER_FIELD_SENDER to explicitly say it's the sender service

2003-08-30 Havoc Pennington <hp@pobox.com>

* dbus/dbus-object-tree.c: write tests and fix the discovered bugs

2003-08-29 Havoc Pennington <hp@pobox.com>

* dbus/dbus-object-tree.c: modify to allow overlapping paths to be

registered
(struct DbusObjectSubtree): shrink this a lot, since we may have a lot of them
(_dbus_object_tree_free_all_unlocked): implement
(_dbus_object_tree_dispatch_and_unlock): implement

2003-08-29 Havoc Pennington <hp@pobox.com>

* dbus/dbus-internals.h: fix _DBUS_N_GLOBAL_LOCKS

2003-08-28 Havoc Pennington <hp@pobox.com>

purge DbusObjectID

* dbus/dbus-connection.c: port to no ObjectID, create a

DBusObjectTree, rename ObjectTree to ObjectPath in public API

* dbus/dbus-connection.h (struct DBusObjectTreeVTable): delete everything except UnregisterFunction and MessageFunction

* dbus/dbus-marshal.c: port away from DBusObjectID, add DBUS_TYPE_OBJECT_PATH

* dbus/dbus-object-registry.[hc], dbus/dbus-object.[hc], dbus/dbus-objectid.[hc]: remove these, we are moving to path-based object IDs

2003-08-25 Havoc Pennington <hp@pobox.com>

Just noticed that dbus_message_test is hosed, I wonder when I broke that. I thought make check was passing earlier...

* dbus/dbus-object-tree.c: add new "object tree" to match DCOP container tree, will replace most of dbus-object-registry

* dbus/dbus-string.c (_dbus_string_append_printf_valist): fix C99 screwup

2003-08-19 Havoc Pennington <hp@pobox.com>

* dbus/dbus-message.c (decode_string_field): support FIELD_SENDER (dbus_message_is_error): fix this function

* bus/dbus-daemon-1.1: clarify logic on when <deny>/<allow> rules match

* bus/policy.c (bus_client_policy_check_can_receive): fix code to reflect clarified man page (bus_client_policy_check_can_send): ditto

* bus/session.conf.in: fixup

* bus/system.conf.in: fixup

2003-08-18 Havoc Pennington <hp@redhat.com>

* dbus/dbus-hash.c (_dbus_hash_table_insert_two_strings): fix

2003-05-11 Havoc Pennington <hp@pobox.com>

* dbus/dbus-marshal.c (_dbus_marshal_validate_arg): fix to avoid
calling _dbus_marshal_validate_arg() for every byte in a byte
array, etc.

```

* dbus/dbus-message-handler.c: use atomic reference counting to
reduce number of locks slightly; the global lock in here sucks

* dbus/dbus-connection.c
(_dbus_connection_update_dispatch_status_and_unlock): variant of
update_dispatch_status that can be called with lock held; then
use
in a couple places to reduce locking/unlocking
(dbus_connection_send): hold the lock over the whole function
instead of acquiring it twice.

* dbus/dbus-timeout.c (_dbus_timeout_new): handle OOM

* bus/connection.c (bus_connections_setup_connection): fix access
to already-freed memory.

* dbus/dbus-connection.c: keep a little cache of linked list
nodes, to avoid using the global linked list alloc lock in the
normal send-message case. Instead we just use the connection lock
that we already have to take.

* dbus/dbus-list.c (_dbus_list_find_last): new function

* dbus/dbus-sysdeps.c (_dbus_atomic_inc, _dbus_atomic_dec):
change to use a struct for the atomic type; fix docs,
they return value before increment, not after increment.

* dbus/dbus-string.c (_dbus_string_append_4_aligned)
(_dbus_string_append_8_aligned): new functions to try to
microoptimize this operation.
(reallocate_for_length): break this out of set_length(), to
improve profile info, and also so we can consider inlining the
set_length() part.

* dbus/dbus-message.c (dbus_message_new_empty_header): init data
strings with some preallocation, cuts down on our calls to
realloc
a fair bit. Though if we can get the "move entire string to empty
string" optimization below to kick in here, it would be better.

* dbus/dbus-string.c (_dbus_string_move): just call
_dbus_string_move_len
(_dbus_string_move_len): add a special case for moving
an entire string into an empty string; we can just
swap the string data instead of doing any reallocs.
(_dbus_string_init_preallocated): new function

glib/test-profile.c |          16 ++++++++-----

```

```
commit b36dd8b35d932d01407b88e948c5196b49e31aa0
```

Author: Havoc Pennington <hp@redhat.com>
Date: 2003-05-11 07:59:08 +0000

2003-05-11 Havoc Pennington <hp@pobox.com>

Write a "test-profile" that does echo client-server with threads; profile reveals lock contention, memcpy/realloc of buffers, and UTF-8 validation as hot spots. 20% of lock contention eliminated with dbus_atomic_inc/dec implementation on x86. Much remaining contention is global mempool locks for GList and DBusList.

* dbus/dbus-sysdeps.c (_dbus_atomic_inc, _dbus_atomic_dec): add x86 implementation

* dbus/dbus-connection.c (struct DBusConnection): use dbus_atomic_t for the reference count

* dbus/dbus-message.c (struct DBusMessage): declare dbus_atomic_t values as volatile

* configure.in: code to detect ability to use atomic integer operations in assembly, from GLib patch

* dbus/dbus-internals.c (_dbus_verbose_real): call getpid every time, tired of it being wrong in threads and forked processes

* glib/test-profile.c: a little program to bounce messages back and forth between threads and eat CPU

* dbus/dbus-connection.c: add debug spew macros for debugging thread locks; include config.h at top; fix deadlock in dbus_connection_flush()

```

commit 9eb162678713477754e9d88eb68c156d336c80ab

Author: Havoc Pennington <hp@redhat.com>

Date: 2003-03-16 20:16:46 +0000

2003-03-16 Havoc Pennington <hp@pobox.com>

* dbus/dbus-string.c (_dbus_string_validate_utf8): oops, unbreak
this. always run the test suite before commit...

* bus/*: adapt to DBusConnection API changes

* glib/dbus-gmain.c: adapt to DBusConnection API changes,
requires renaming stuff to avoid dbus_connection_dispatch name
conflict.

* dbus/dbus-transport.c (_dbus_transport_queue_messages): new
function

* dbus/dbus-message.c (_dbus_message_loader_queue_messages):
separate from _dbus_message_loader_return_buffer()

* dbus/dbus-connection.c (dbus_connection_get_n_messages): remove
this, because it's now always broken to use; the number of
messages in queue vs. the number still buffered by the message
loader is undefined/meaningless. Should use
dbus_connection_get_dispatch_state().
(dbus_connection_dispatch): rename from
dbus_connection_dispatch_message

commit 457dd574d5eda1286571f7070860c6feb56f184e

Author: Havoc Pennington <hp@redhat.com>

Date: 2003-03-15 20:47:16 +0000

2003-03-15 Havoc Pennington <hp@pobox.com>

Make it pass the Hello handling test including all OOM codepaths.
Now to do other messages...

- * bus/services.c (bus_service_remove_owner): fix crash when removing owner from an empty list of owners
(bus_registry_ensure): don't leave service in the list of a connection's owned services if we fail to put the service in the hash table.
- * bus/connection.c (bus_connection_preallocate_oom_error): set error flag on the OOM error.
- * dbus/dbus-connection.c (_dbus_connection_new_for_transport): handle _dbus_transport_set_connection failure
- * dbus/dbus-transport-unix.c (_dbus_transport_new_for_fd): modify to create watches up front and simply enable/disable them as needed.
(unix_connection_set): this can now fail on OOM
- * dbus/dbus-timeout.c, dbus/dbus-watch.c: add concept of enabling/disabling a watch or timeout.
- * bus/loop.c (bus_loop_iterate): don't touch disabled watches/timeouts
- * glib/dbus-gmain.c: adapt to enable/disable watches and timeouts

commit e0a3fe2914f611ef4d74bbc1ca39794f0f7ae575
Author: Havoc Pennington <hp@redhat.com>
Date: 2003-03-13 00:56:43 +0000

2003-03-12 Havoc Pennington <hp@redhat.com>

Mega-patch that gets the message bus daemon initially handling out-of-memory. Work still needed. Also lots of random moving stuff to DBusError instead of ResultCode.

- * dbus/dbus-list.c (`_dbus_list_length_is_one`): new function
- * dbus/dbus-connection.c (`dbus_connection_send_with_reply_and_block`): use DBusError
- * dbus/dbus-bus.c: adapt to API changes, make it use DBusError

not DBusResultCode

- * dbus/dbus-connection.c (`dbus_connection_send`): drop the result code here, as the only failure possible is OOM.
- * bus/connection.c (`bus_connection_disconnect`): rename `bus_connection_disconnected` as it's a notification only
- * bus/driver.c (`bus_driver_handle_acquire_service`): don't free "name" on `get_args` failure, should be done by `get_args`; don't disconnect client for bad args, just return an error. (`bus_driver_handle_service_exists`): ditto
- * bus/services.c (`bus_services_list`): NULL-terminate returned array
- * bus/driver.c (`bus_driver_send_service_lost`) (`bus_driver_send_service_acquired`): send messages from driver to specific client to the client's unique name, not to the broadcast service.
- * dbus/dbus-message.c (`decode_header_data`): reject messages that contain no name field
(`_dbus_message_get_client_serial`): rename to `dbus_message_get_serial` and make public
(`_dbus_message_set_serial`): rename from `set_client_serial`
(`_dbus_message_set_reply_serial`): make public
(`_dbus_message_get_reply_serial`): make public
- * bus/connection.c (`bus_connection_foreach`): allow stopping iteration by returning `FALSE` from `foreach` function.
- * dbus/dbus-connection.c (`dbus_connection_send_preallocated`) (`dbus_connection_free_preallocated_send`) (`dbus_connection_preallocate_send`): new API for sending a message without possibility of malloc failure.
(`dbus_connection_send_message`): rename to just `dbus_connection_send` (and same for whole function family)

* dbus/dbus-errors.c (dbus_error_free): make this reinit the error

* dbus/dbus-sysdeps.c (_dbus_exit): new function

* bus/activation.c: handle/return errors

* dbus/dbus-errors.h: add more DBUS_ERROR #define

* dbus/dbus-sysdeps.c (_dbus_directory_open)
(_dbus_file_get_contents)
(_dbus_directory_get_next_file): use DBusError instead of
DBusResultCode
(_dbus_result_from_errno): move to this file

commit c79213c6d3b041ce00bb00f24d4824e4a77f63ef
Author: Havoc Pennington <hp@redhat.com>
Date: 2003-02-26 06:42:57 +0000

2003-02-26 Havoc Pennington <hp@pobox.com>

* dbus/dbus-connection.c
(dbus_connection_send_message_with_reply_and_block): fix crash
where we ref'd the outgoing message instead of the returned reply

* dbus/dbus-transport-unix.c (do_authentication): check read
watch
at the end of this function, so if we didn't need to read for
authentication, we reinstall it for receiving messages

* dbus/dbus-message.c (dbus_message_new_reply): allow replies to
a NULL sender for peer-to-peer case

* dbus/dbus-transport-unix.c (check_read_watch): handle
!authenticated case correctly

* glib/dbus-gmain.c: add support for DBusServer

* dbus/dbus-server.c: add data slot support

* glib/dbus-gmain.c (dbus_connection_setup_with_g_main): check
return values and handle errors

* dbus/dbus-dataslot.c: factor out the data slot stuff from
DBusConnection

* Doxyfile.in (INPUT): add glib subdir

* glib/dbus-gmain.c (dbus_connection_setup_with_g_main): rename
setup_with_g_main instead of hookup_with_g_main; write docs

2003-02-18 Joe Shaw <joe@assbarn.com>

* dbus/dbus-auth.c (handle_server_data_stupid_test_mech): Just
get
credentials from our currently running process.
(get_word): Fix a buglet where we were copying the entire length
instead of relative to our position.

* dbus/dbus-hash.c (_dbus_hash_test): Don't try to allocate the
keys on the stack... it's 640k of data.

* dbus/dbus-sysdeps.c (_dbus_read_credentials_unix_socket):
Always
read the credentials byte off the socket, even if we don't have
SO_PEERCREC.
(_dbus_poll): Implement poll() using select() for systems which
don't have it.

* glib/test-dbus-glib.c (main): Print out an error if no
parameters are given.

* test/data/auth/fallback.auth-script: Added. Tests that a
client
can fallback to a secondary auth mechanism if the first fails.

2003-02-15 Alexander Larsson <alexl@redhat.com>

- * dbus/dbus-threads.c:
- * dbus/dbus-threads.h:
Add condvars. Remove static mutext from API.
Implement static mutexes by initializing them from threads_init.
- * glib/dbus-gthread.c:
- * qt/dbus-qthread.cpp:
Update with the thread api changes.
- * dbus/dbus-list.c:
- * dbus/dbus-list.h:
Turn StaticMutex into normal mutex + init function.
Export new functions _dbus_list_alloc_link, _dbus_list_free_link,
_dbus_list_append_link, _dbus_list_prepend_link
- * dbus/dbus-sysdeps.c:
- * dbus/dbus-sysdeps.h:

New type `dbus_atomic_t`, and new functions `_dbus_atomic_inc`, `_dbus_atomic_dec`. Only slow fallback implementation at the moment.

* `dbus/dbus-protocol.h`:
Add `DBUS_MESSAGE_LOCAL_DISCONNECT` define

* `dbus/dbus-message.c`:
Make `ref/unref` atomic.
Fix some docs.

* `dbus/dbus-connection-internal.h`:
* `dbus/dbus-connection.c`:
* `dbus/dbus-connection.h`:
Make threadsafe.
Change `_peek` to `_borrow`, `_return` & `_steal_borrowed`.
Change `disconnect` callback to event.
Make `dbus_connection_dispatch_messages` reentrant.

* `dbus/dbus-transport.c`:
Don't ref the connection on calls to the transport implementation.

* `dbus/dbus-message-handler.c`:
Make threadsafe.

* `glib/dbus-gmain.c`:
Don't use `peek_message` anymore

* `test/Makefile.am`:
* `test/debug-thread.c`:
* `test/debug-thread.h`:
Simple thread implementation that asserts() on deadlocks in single-threaded code.

* `test/bus-test.c`:
(main) Call `debug_threads_init`.

* `test/watch.c`:
Use `disconnect` message instead of `disconnect` callback.

* `bus/connection.c`:
* `bus/connection.h`:
Don't call `dbus_connection_set_disconnect_function`. Instead
export
`bus_connection_disconnect`.

* `bus/dispatch.c`:
Call `bus_connection_disconnect` when we get a disconnected message.

commit 12d8e0d2d6aeb5f29ff8b51cdd4aae857d35d13f
Author: Alex Larsson <alex1@redhat.com>
Date: 2003-02-01 22:02:27 +0000
```

```
2003-02-02 Alexander Larsson <alex1@redhat.com>
```

```
* dbus/dbus-watch.c (dbus_watch_get_flags):
Add note in the docs that ERROR or HANGUP won't be returned
and are assumed always on.

* glib/dbus-gmain.c (add_watch):
Always add IO_ERR | IO_HUP

* dbus/dbus-message.h:
Add semicolon after dbus_message_iter_get_string_array().
Makes qt code build again
```

```

commit 74cef08b5e2f2596cade4fc1027933d763cd13ae
Author: Anders Carlsson <andersca@gnome.org>
Date: 2003-01-25 21:22:57 +0000

2003-01-25 Anders Carlsson <andersca@codefactory.se>

* glib/dbus-gmain.c: (dbus_connection_prepare),
(dbus_connection_check), (dbus_connection_dispatch), (add_watch),
(remove_watch), (dbus_connection_hookup_with_g_main):
Rewrite the glib handling to use its own GSource instead of a
GIOChannel so we can catch messages put in the queue while
waiting
for a reply.

commit 6f062c93ca19a73b34688488e76ec055d2bab2a0
Author: Anders Carlsson <andersca@gnome.org>
Date: 2003-01-24 23:51:58 +0000

2003-01-25 Anders Carlsson <andersca@codefactory.se>

* bus/connection.c: (bus_connection_foreach):
* bus/connection.h:
Add new bus_connection_foreach function.

* bus/driver.c: (send_one_message),
(bus_driver_broadcast_message):
Add function that broadcasts a message to all clients.

(bus_driver_send_service_created), (bus_driver_handle_hello),
(bus_driver_send_welcome_message),
(bus_driver_handle_list_services), (bus_driver_message_handler):
Implement functions that take care of listing services, and
notifying

clients when new services are created.

```
* bus/services.c: (bus_services_list):
* bus/services.h:
Add new function that returns an array of strings with the
currently
registered services.

* glib/dbus-glib.h:
* glib/dbus-gmain.c:
Update copyright year.

```

2003-01-21 Anders Carlsson <andersca@codefactory.se>

```
* dbus/dbus-connection.c: (dbus_connection_send_message):
Add a new client_serial parameter.

(dbus_connection_send_message_with_reply):
Remove a @todo since we've implemented the blocking function.

(dbus_connection_send_message_with_reply_and_block):
New function that sends a message and waits for a reply and
then returns the reply.

* dbus/dbus-connection.h:
Add new functions.

* dbus/dbus-errors.c: (dbus_result_to_string):
* dbus/dbus-errors.h:
Add new DBUS_RESULT.

* dbus/dbus-message-internal.h:
* dbus/dbus-message.c: (_dbus_message_get_reply_serial),
(_dbus_message_set_sender), (dbus_message_write_header),
(dbus_message_new_reply), (decode_header_data),
(_dbus_message_loader_return_buffer), (_dbus_message_test):
* dbus/dbus-message.h:
Add new functions that set the reply serial and sender.
Also marshal and demarshal them correctly and add test.

* dbus/dbus-protocol.h:
Add new DBUS_MESSAGE_TYPE_SENDER.

* glib/dbus-glib.h:
```

```
* glib/dbus-gmain.c: (watch_callback), (free_callback_data),
(add_watch), (remove_watch), (add_timeout), (remove_timeout),
(dbus_connection_hookup_with_g_main):
* glib/test-dbus-glib.c: (main):
Rewrite to use GIOChannel and remove the GSource crack.
```

```
* test/echo-client.c: (main):
* test/watch.c: (check_messages):
Update for changed APIs
```

2002-12-24 Havoc Pennington <hp@pobox.com>

```
* glib/dbus-gthread.c: fix include

* glib/dbus-glib.h: rename DBusMessageHandler for now.
I think glib API needs to change, though, as you don't
want to use DBusMessageFunction, you want to use the
DBusMessageHandler object. Probably
dbus_connection_open_with_g_main_loop()
and dbus_connection_setup_g_main_loop() or something like that
(but think of better names...) that just create a connection
that has watch/timeout functions etc. already set up.

* dbus/dbus-connection.c
(dbus_connection_send_message_with_reply): new function just to
show how the message handler helps us deal with replies.

* dbus/dbus-list.c (_dbus_list_remove_last): new function

* dbus/dbus-string.c (_dbus_string_test): free a string that
wasn't

* dbus/dbus-hash.c: use memory pools for the hash entries
(rebuild_table): be more paranoid about overflow, and
shrink table when we can
(_dbus_hash_test): reduce number of sprintfs and write
valid C89. Add tests for case where we grow and then
shrink the hash table.

* dbus/dbus-mempool.h, dbus/dbus-mempool.c: memory pools
```

```
* dbus/dbus-connection.c (dbus_connection_register_handler)
(dbus_connection_unregister_handler): new functions

* dbus/dbus-message.c (dbus_message_get_name): new

* dbus/dbus-list.c: fix docs typo

* dbus/dbus-message-handler.h, dbus/dbus-message-handler.c:
an object representing a handler for messages.
```

```

Initial commit of module dbus-glib

0 files changed

File = ChangeLog.pre-1-0

2006-11-09 John (J5) Palmieri <johnp@redhat.com>

* Released 1.0.0

2006-11-09 John (J5) Palmieri <johnp@redhat.com>

* AUTHORS: added Peter and Tor of windows porting fame

2006-11-08 Havoc Pennington <hp@redhat.com>

* doc/dbus-specification.xml: add a note about protocol stability

* doc/TODO: Remove "important for 1.0" section, replace with
"important for 1.2" section

2006-11-08 John (J5) Palmieri <johnp@redhat.com>

* README: remove some of the out of date flags

* doc/TODO: Remove todo items which are done

2006-11-08 John (J5) Palmieri <johnp@redhat.com>

* tools/dbus-monitor.c: Handle sigint so we flush stdout

(Patch from Olli Salli <olli dot sall i at collabora dot co dot uk>)

2006-11-08 John (J5) Palmieri <johnp@redhat.com>

* tools/dbus-monitor.1: update the manpage for dbus-monitor
(Patch from Olli Salli <olli dot sall i at collabora dot co dot uk>)

2006-11-08 John (J5) Palmieri <johnp@redhat.com>

* AUTHORS: Update with all people listed in the ChangeLog

2006-11-08 John (J5) Palmieri <johnp@redhat.com>

* tools/dbus-monitor.c: add profiling tools to dbus-monitor
(Patch from Olli Salli <olli dot sall i at collabora dot co dot uk>)

2006-11-07 Havoc Pennington <hp@redhat.com>

* HACKING: Update release instructions to include stuff about stable releases, branching, etc. May not be totally correct, please fix if needed, but keep instructions up-to-date so we do each stable release consistently in the future.

2006-11-07 Havoc Pennington <hp@redhat.com>

* doc/dbus-specification.xml, doc/dbus-faq.xml, README: various documentation updates. Bump faq/spec versions (not to 1.0; I don't think the spec will be "finished"/1.0 when we ship the 1.0 library).

2006-11-06 John (J5) Palmieri <johnp@redhat.com>

* bus/bus.c: Missed patch - pass in the context to the directory watch

2006-11-02 John (J5) Palmieri <johnp@redhat.com>

* Released D-Bus 1.0 RC 3(0.95)

2006-11-02 John (J5) Palmieri <johnp@redhat.com>

* bus/activation.c (bus_activation_new): don't fail if we can not read the directory as it may not exist

2006-11-02 John (J5) Palmieri <johnp@redhat.com>

* bus/config-parser.c (service_dirs_find_dir): use

loop _dbus_list_get_next_link so we don't get stuck in an infinite
loop
 (start_busconfig_child): move processing of
standard_session_servicedirs
 tags here because they have no content
 (bus_config_parser_content): check we don't have content in
 standard_session_servicedirs tag

2006-11-02 John (J5) Palmieri <johnp@redhat.com>

 * tools/Makefile.am: Make sure the /var/lib/dbus directory is
created
 Packagers need to own this directory

2006-11-02 John (J5) Palmieri <johnp@redhat.com>

 * tools/run-with-tmp-session-bus.sh: fixed script to replace the
<standard_session_servicedirs> tag with a <sevicedir> tag that
points to the test service directory

2006-11-02 John (J5) Palmieri <johnp@redhat.com>

 * configure.in: Add a check for DIR *dirp->dd_fd

 * dbus/dbus-sysdeps-util-unix: if HAVE_DDFD is defined use
DIR *dirp->dd_fd else use DIR *dirp->__dd_fd. This takes care
of both Solaris and Irix

2006-11-01 Havoc Pennington <hp@redhat.com>

 * bus/dbus-daemon.1.in: document standard_session_servicedirs

2006-11-01 John (J5) Palmieri <johnp@redhat.com>

 * configure.in: expose DBUS_DATADIR

 * bus/config-parser.c: add the standard_session_servicedirs
element
 to the parser
 (bus_config_parser_content): process the
standard_session_servicedirs
 element by getting the standard directories from sysdeps and
merging
 them into the service directory list
 (test_default_session_servicedirs): make sure we get what we
expect

 * bus/session.conf.in: replace the servicedir tag with the
standard_session_servicedirs tag

 * dbus/dbus-list.h: remove the typedef of DBusList and place it
in

dbus-sysdeps.h to avoid circular header dependencies

* dbus/dbus-sysdeps.h: add the typedef of DBusList

* dbus/dbus-sysdeps-unix.c (split_paths_and_append): utility function which takes a string of directories delimited by colons, parses them

out, appends a suffix and puts them in a list ignoring empty elements

(_dbus_get_standard_session_servicedirs): returns the standard directories for a session bus to look for service activation files

on Unix which includes the XDG_DATA_HOME, XDG_DATA_DIRS and DBUS_DATADIR directories

* test/data/valid-config-files/many-rules.conf: add the standard_session_servicedirs tag to the valid config file tests

2006-10-30 Havoc Pennington <hp@redhat.com>

* tools/dbus-launch.1, doc/TODO: capture intent to change the command line options of dbus-launch a bit post 1.0

2006-10-27 Havoc Pennington <hp@redhat.com>

* dbus/dbus-connection.c (dbus_connection_open_private): document how to choose shared vs. private connections

2006-10-27 Havoc Pennington <hp@redhat.com>

* dbus/dbus-test.c: enclose more of the file in the DBUS_BUILD_TESTS check.

* dbus/dbus-sysdeps-pthread.c (PTHREAD_CHECK): fix for DBUS_DISABLE_ASSERT case.

* dbus/dbus-connection.c (dbus_connection_get_unix_user): document that it only works on the server side

* dbus/dbus-bus.c: add a global lock covering the BusData we attach to each connection

(internal_bus_get): lock our access to the BusData

(dbus_bus_register): lock the entire registration process

with _DBUS_LOCK(bus_datas). If we get the lock and registration is already complete, silently return (vs. previous behavior of aborting).

(dbus_bus_set_unique_name): lock the BusData

(dbus_bus_get_unique_name): lock the BusData

2006-10-27 John (J5) Palmieri <johnp@redhat.com>

* bus/config-parser.c (service_dirs_find_dir, service_dirs_append_unique_or_free, service_dirs_append_link_unique_or_free): New static methods for only appending unique service directory names into the service directory list
(merge_included, bus_config_parser_content): Only add unique service directory names into the list

2006-10-27 Havoc Pennington <hp@redhat.com>

* dbus/dbus-sysdeps-pthread.c: make the "count" and "holder" variables volatile, suggested by Thiago. Document struct fields. (PTHREAD_CHECK): remove pthread error checking if assertions are disabled, should reduce the no-assertions case to the bare minimum code.

2006-10-26 Havoc Pennington <hp@redhat.com>

* dbus/dbus-sysdeps-pthread.c (_dbus_pthread_mutex_lock): change to be recursive
(_dbus_pthread_mutex_unlock): make it recursive
(_dbus_pthread_condvar_wait): save/restore the recursion count
(_dbus_pthread_condvar_wait_timeout): save/restore the recursion count

2006-10-26 Havoc Pennington <hp@redhat.com>

* doc/dbus-specification.xml: clarify the UUID text slightly
* dbus/dbus-sysdeps-pthread.c: check for and mostly abort on pthread errors. Add DBusMutexPThread and DBusCondVarPThread in preparation for being able to extend them for e.g. recursive mutexes.

2006-10-26 Havoc Pennington <hp@redhat.com>

* dbus/dbus-threads.[hc]: Documentation improvements. Clarify how condition variables relate to recursive mutexes.

* dbus/dbus-sysdeps-pthread.c, dbus/dbus-sysdeps-win-thread.c, dbus/dbus-threads.c: Split the platforms-specific thread implementations into their own files.

* dbus/dbus-sysdeps-pthread.c
(_dbus_pthread_condvar_wait_timeout): invert the return value, it was backward. Not that anything uses it.

2006-10-26 John (J5) Palmieri <johnp@redhat.com>

* dbus-sysdeps-unix.c (_dbus_set_local_creds): Clean up the

LOCAL_CREDS vs CMSCRED stuff a bit. Prefer CMSCRED. This needs to be cleaned up more.

* doc/TODO: Add a todo that *BSD hackers should look at cleaning up the CREDS issue.

2006-10-26 John (J5) Palmieri <johnp@redhat.com>

* configure.in, dbus-1.pc.in: Check to see if thread methods are in glibc or libpthread and add -lpthread to the link stage if it is the latter

2006-10-26 Thiago Macieira <thiago@kde.org>

* dbus/dbus-connection.c (_dbus_connection_open_internal): Fix bug 8780: the connection lock is only required while recording the shared connection, so protect only that code section. Don't require connection_lookup_shared to return a locked connection.

2006-10-26 Thiago Macieira <thiago@kde.org>

* tools/dbus-launch-x11.c (get_session_file, init_x_atoms): check if get_machine_uid() returns NULL before proceeding any further: we can't init the X atoms or create a session file name if there is no machine ID.
This solves a crash reported by some users if --exit-with-session was used without --autolaunch=<machine-id>

2006-10-26 John (J5) Palmieri <johnp@redhat.com>

* tools/dbus-launch.c (main): run the dbus-daemon in the builddir if tests are enabled and the DBUS_USE_TEST_BINARY env variable is set

* tools/run-with-tmp-session-bus.sh: set DBUS_USE_TEST_BINARY before we run dbus-launch

* configure.in: define TEST_BUS_BINARY to be the full path to dbus-daemon in the build root

2006-10-25 Sjoerd Simons <sjoerd@luon.net>

* dbus/Makefile.am:
* tools/Makefile.am:
* tools/dbus-uuidgen.1:
Move the machine-id file to /var/lib/dbus

2006-10-24 David Zeuthen <davidz@redhat.com>

* dbus/dbus-threads.c (init_uninitialized_locks): Fix typo so it's

```
    _dbus_assert (thread_init_generation != _dbus_current_generation)
    not _dbus_assert (thread_init_generation ==
_dbus_current_generation)
```

2006-10-24 Thiago Macieira <thiago@kde.org>

- * dbus/dbus-sysdeps.h:
- * dbus/dbus-sysdeps-unix.c: Add function
_dbus_make_file_world_readable that chmods a file to 0644.
- * dbus/dbus-sysdeps-unix.c (_dbus_get_autolaunch_address):
Avoid writing to the static "argv" array, thereby avoiding a
COW on the child process.
- * dbus/dbus-internals.c (_dbus_create_uuid_file_exclusively):
call _dbus_make_file_world_readable on the created file.

2006-10-23 David Zeuthen <davidz@redhat.com>

- * dbus/dbus-memory.c: Use atomic variable to protect
n_blocks_outstanding otherwise OOM will be reported using SMP on
some arches
- * bus/dispatch.c: Add missing end of line characters
- * bus/desktop-file.c (parse_section_start, parse_key_value)
(bus_desktop_file_load): Properly handle OOM
- * dbus/dbus-threads.c (init_uninitialized_locks): Check that
thread_init_generation equals _dbus_current_generation, not 0

2006-10-22 Havoc Pennington <hp@redhat.com>

- * dbus/dbus-connection-internal.h: move prototype of
_dbus_bus_notify_shared_connection_disconnected_unlocked() here
so
it isn't in a public header and doesn't end up in the DbusBus
group in Doxygen

2006-10-21 Havoc Pennington <hp@redhat.com>

- * Makefile.am (EXTRA_DIST): dist cleanup-man-pages.sh so it's in
the tarball if packagers want to run it
- * cleanup-man-pages.sh: Add a script which munges all the
internal
API man pages out of the Doxygen output. This reduces the size of
the installed man pages from 7 to 2 megs, and avoids
namespace-polluting pages. Right now (like Doxygen) this script
isn't in the build, it's something packagers can do manually.

2006-10-21 Havoc Pennington <hp@redhat.com>

* dbus/dbus-connection.h: don't include the watch/timeout functions in connection section

2006-10-21 Havoc Pennington <hp@redhat.com>

* Documentation! Whee! Doxygen now 100% silent. If you make it angry again, you will be punished.

2006-10-21 Havoc Pennington <hp@redhat.com>

* More documentation - all public API now documented according to Doxygen

2006-10-21 Havoc Pennington <hp@redhat.com>

* Document a bunch of undocumented stuff

2006-10-21 Havoc Pennington <hp@redhat.com>

* Clean up Doxygen group markers for public API so Doxygen finds everything (not comprehensively fixed for private API). Means all remaining Doxygen warnings are just about missing docs and thus pretty simple to resolve.

2006-10-21 Havoc Pennington <hp@redhat.com>

* dbus/dbus-macros.h: add DBUS_GNUC_DEPRECATED macro

* dbus/dbus-message.h: mark dbus_message_iter_get_array_len() as DBUS_GNUC_DEPRECATED

2006-10-21 Havoc Pennington <hp@redhat.com>

* Move all private API into the private Doxygen group sections of the files, so they don't show up in the public API docs

2006-10-21 Havoc Pennington <hp@redhat.com>

* dbus/dbus-message.h: put #ifndef DBUS_DISABLE_DEPRECATED around dbus_message_iter_get_array_len().

* throughout: documentation improvements.

2006-10-20 Havoc Pennington <hp@redhat.com>

* doc/TODO: remove the int64 thing from 1.0 since it doesn't matter, and the message-loader-breaker thing since nobody is going to do it. Add an item to 1.0 about supporting recursive locks in dbus_threads_init_default() though, since it should be easy.

* dbus/dbus-connection.c (`_dbus_connection_read_write_dispatch`):
Fix this in the `!dispatch` case to avoid busy-looping after
disconnection

* More misc docs improvements

2006-10-19 Havoc Pennington <hp@redhat.com>

* more Doxygen-related fixes (lots of moving things from the
public to internal section in `dbus-connection.c`)

2006-10-19 Havoc Pennington <hp@redhat.com>

* Fix a pile of Doxygen warnings and missing docs

2006-10-19 John (J5) Palmieri <johnp@redhat.com>

* `bus/dir-watch-default.c`, `bus/dir-watch-dnotify.c`,
`bus/dir-watch-kqueue.c` (`bus_watch_directory`): Pass in a
`BusContext`

instead of a `void *`. `kqueue` uses this to get the context's loop
while the other modules ignore the parameter. This allows us to
avoid platform conditionals

* `bus/bus.c` (`process_config_postinit`): Pass in the context to the
watch

2006-10-19 John (J5) Palmieri <johnp@redhat.com>

* `bus/messagebus.in`, `bus/rc.messagebus.in`: run `dbus-uuidgen --
ensure`
when starting the system bus

2006-10-18 John (J5) Palmieri <johnp@redhat.com>

* `configure.in`: More fixups for cross compile (Patch from
Marco Pracucci <development at pracucci dot com>)

2006-10-17 Havoc Pennington <hp@redhat.com>

* `tools/dbus-send.c` (`main`): don't close shared connection, fix
from Timo Hoenig

2006-10-17 Havoc Pennington <hp@redhat.com>

* `configure.in` (`CPPFLAGS`): don't do `-DDBUS_API_SUBJECT_TO_CHANGE`
here

* `dbus/dbus.h`: drop the `DBUS_API_SUBJECT_TO_CHANGE` requirement,
since realistically it doesn't look like we'll be changing it
anymore.

2006-10-17 Havoc Pennington <hp@redhat.com>

* dbus/dbus-internals.c (_dbus_warn_check_failed): new function to be used for return_if_fail type warnings; prefixes the pid, and fatal by default.

2006-10-14 John (J5) Palmieri <johnp@redhat.com>

* configure.in: Released 1.0 RC 2(0.94)
Add check for -fPIC and enable it if available

2006-10-14 John (J5) Palmieri <johnp@redhat.com>

* doc/TODO: Remove the check TODO item

2006-10-13 John (J5) Palmieri <johnp@redhat.com>

* dbus-transport-socket.c (exchange_credentials):
Print out more detailed errors if reading or sending credentials fail (Patch from Julio M. Merino Vidal <jmmv at NetBSD dot org>)

2006-10-13 John (J5) Palmieri <johnp@redhat.com>

* configure.in: when checking for posix getpwnam_r assume true for cross compiles

2006-10-13 John (J5) Palmieri <johnp@redhat.com>

* configure.in: Check for gethostbyname first before we check for it in libnsl. On gnu systems it is implemeneted

2006-10-13 Havoc Pennington <hp@redhat.com>

* dbus/dbus-connection.c
(dbus_connection_send_with_reply_and_block): fix to handle closed connections, from Tabet Ingo bug #8631

2006-10-11 John (J5) Palmieri <johnp@redhat.com>

* configure.in: use AC_TRY_COMPILE for dirfd instead of AC_TRY_RUN

2006-10-11 John (J5) Palmieri <johnp@redhat.com>

* test/name-test/Makefile.am: don't link against both libdbus and libdbus-convenience

2006-10-11 John (J5) Palmieri <johnp@redhat.com>

* configure.in: check for dirfd even if it is a macro
(Patch from Timothy Redaelli <drizzt at gufi dot org>)

2006-10-08 John (J5) Palmieri <johnp@redhat.com>

* configure.in: define _POSIX_PTHREAD_SEMANTICS on solaris
avoid using dirfd on systems that don't have dirfd
(Patch by Brian Cameron <brian dot cameron at sun dot com>)

2006-10-02 John (J5) Palmieir <johnp@redhat.com>

* dbus/dbus-sysdeps.c (_dbus_abort): Remove from
#ifndef DBUS_DISABLE_ASSERTS macro to fix distcheck

* dbus/dbus-sysdeps-unix.c (_dbus_print_backtrace): Remove from
#if !defined (DBUS_DISABLE_ASSERT) || defined (DBUS_BUILD_TESTS)
macro because _dbus_abort calls it

* tools/Makefile.am: Add dbus-launch.h to the source list so
distcheck
works

2006-10-02 John (J5) Palmieir <johnp@redhat.com>

* dbus/dbus-sysdeps-util-unix.c (dirent_buf_size): Add check for
MAXNAMELEN for Mac OSX. (Patch from Jonas B <sanoix at gmail dot
com>)

2006-10-02 Thiago Macieira <thiago@kde.org>

* tools/dbus-launch.c (main): make it complain and abort
execution in case an unknown option is given. Also, process
the '--' argument as the end of arguments.

2006-10-01 Havoc Pennington <hp@redhat.com>

* tools/dbus-launch.c (print_variables): if no syntax is given,
don't print something that's sort-of-half-sh-syntax, just print
a plain key-value pairs thing.

* tools/dbus-launch-x11.c: use machine ID rather than hostname
for
the local machine representation (but still have the hostname in
the display). Remove the hostname from the display if it is
localhost. Change session files to be named
~/.dbus/session-bus/machine-display. Change X atoms to be
underscore-prefixed so nobody whines about ICCCM compliance.
Otherwise name them the same as the env variables.
Change session file format to include key-value pairs and an
explanatory comment. Keys are the same as the env variables.
(set_address_in_x11): X property format can't depend on

sizeof(pid_t) on a particular machine, fix to always be 32 bits

* tools/dbus-launch.c: make --autolaunch take a machine id argument. If --autolaunch is used with a program to run, complain for now (but add a FIXME). Also, don't look for existing bus if there's a program to run (but add a FIXME).

* dbus/dbus-sysdeps-unix.c (_dbus_get_autolaunch_address): pass machine uuid to dbus-launch (avoids linking dbus-launch to libdbus just to get this, and avoids duplicating uuid-reading code).

* tools/dbus-launch.1: clarify various things

2006-10-01 Havoc Pennington <hp@redhat.com>

* test/test-service.c (path_message_func): remove broken extra unref that was hidden by the bugs in dbus-connection.c/dbus-bus.c

* test/test-shell-service.c (path_message_func): same fix

* dbus/dbus-connection.c
(_dbus_connection_get_dispatch_status_unlocked): break up the function a little for clarity and fix the notification of dbus-bus.c to not require dispatch to be complete

* dbus/dbus-connection.c (dbus_connection_unref): improve the warning when you try to finalize an open connection.

2006-10-01 Havoc Pennington <hp@redhat.com>

* dbus/dbus-bus.c
(internal_bus_get): only weak ref the connection; this means _dbus_bus_notify_shared_connection_disconnected_unlocked can be called safely in any context
(_dbus_bus_notify_shared_connection_disconnected_unlocked): don't unref

* dbus/dbus-connection.c
(_dbus_connection_get_dispatch_status_unlocked): move _dbus_bus_notify_shared_connection_disconnected_unlocked here when queuing Disconnected instead of when the Disconnected message arrives, so dbus_bus_get() won't return closed connections.

2006-10-01 Havoc Pennington <hp@redhat.com>

* dbus/dbus-connection.c
(_dbus_connection_close_if_only_one_ref):
Add a hack to make DBusNewConnectionFunction work right.

* dbus/dbus-server-socket.c (handle_new_client_fd_and_unlock):
use
the hack here. Also, fix the todo about refcount leak.

* dbus/dbus-server-debug-pipe.c (_dbus_transport_debug_pipe_new):
and use the hack here

* dbus/dbus-connection.c: Kill the "shared" flag vs. the
"shareable" flag; this was completely broken, since it meant
dbus_connection_open() returned a connection of unknown
shared-ness. Now, we always hold a ref on anything opened
as shareable.

Move the call to notify dbus-bus.c into
connection_forget_shared_unlocked, so libdbus consistently
forgets
all its knowledge of a connection at once. This exposed numerous
places where things were totally broken if we dropped a ref
inside
get_dispatch_status_unlocked where
connection_forget_shared_unlocked was previously, so move
connection_forget_shared_unlocked into
_dbus_connection_update_dispatch_status_and_unlock. Also move the
exit_on_disconnect here.

(shared_connections_shutdown): this assumed weak refs to the
shared connections; since we have strong refs now, the assertion
was failing and stuff was left in the hash. Fix it to close
still-open shared connections.

* bus/dispatch.c: fixup to use dbus_connection_open_private on
the
debug pipe connections

* dbus/dbus-connection.c (dbus_connection_dispatch): only notify
dbus-bus.c if the closed connection is in fact shared
(_dbus_connection_close_possibly_shared): rename from
_dbus_connection_close_internal
(dbus_connection_close, dbus_connection_open,
dbus_connection_open_private): Improve docs to explain the deal
with when you should close or unref or both

* dbus/dbus-bus.c
(_dbus_bus_notify_shared_connection_disconnected_unlocked):
rename
from _dbus_bus_check_connection_and_unref_unlocked and modify to
loop over all connections

* test/test-utils.c (test_connection_shutdown): don't try to
close
shared connections.

* test/name-test/test-threads-init.c (main): fix warnings in here

* dbus/dbus-sysdeps.c (_dbus_abort): support DBUS_BLOCK_ON_ABORT env variable to cause blocking waiting for gdb; drop DBUS_PRINT_BACKTRACE and just call _dbus_print_backtrace() unconditionally.

* configure.in: add -export-dynamic to libtool flags if assertions enabled so _dbus_print_backtrace works.

* dbus/dbus-sysdeps-unix.c (_dbus_print_backtrace): use fprintf instead of _dbus_verbose to print the backtrace, and diagnose lack of -rdynamic/-export-dynamic

2006-09-30 Havoc Pennington <hp@redhat.com>

* dbus/dbus-bus.c (dbus_bus_get_private, dbus_bus_get) (internal_bus_get): fix screwy code formatting. whoever committed that was not paying attention!

2006-09-30 Havoc Pennington <hp@redhat.com>

* configure.in (LT_CURRENT, LT_AGE): increment current and age to reflect addition of interfaces.

* doc/dbus-specification.xml: describe a new org.freedesktop.DBus.Peer.GetMachineId method

* dbus/dbus-string.c (_dbus_string_skip_white_reverse): new function (_dbus_string_skip_white, _dbus_string_skip_blank): use new DBUS_IS_ASCII_BLANK, DBUS_IS_ASCII_WHITE macros and fix assertion at end of skip_white (_dbus_string_chop_white): new function

* bus/connection.c (bus_connections_setup_connection): call dbus_connection_set_route_peer_messages.

* dbus/dbus-connection.c (_dbus_connection_peer_filter_unlocked_no_update): modify to support a GetMachineId method.

Also, support a new flag to let the bus pass peer methods through to apps on the bus, which can be set with dbus_connection_set_route_peer_messages.

Finally, handle and return an error for anything unknown on the Peer interface, which will allow us to extend the Peer interface in the future without fear that we're now intercepting something apps were wanting to see.

- * tools/dbus-uuidgen.c: a thin wrapper around the functions in dbus/dbus-uuidgen.c
- * dbus/dbus-uuidgen.c: implement the bulk of the dbus-uuidgen binary here, since most of the code is already in libdbus
- * dbus/dbus-sysdeps.c (_dbus_read_local_machine_uid): read the uid from the system config file
- * dbus/dbus-internals.c (_dbus_generate_uid, _dbus_uuid_encode) (_dbus_read_uid_file_without_creating) (_dbus_create_uid_file_exclusively, _dbus_read_uid_file): new uid-related functions, partly factored out from dbus-server.c
- * dbus/dbus-sysdeps.c (_dbus_error_from_errno): convert EEXIST to DBUS_ERROR_FILE_EXISTS instead of EEXIST
- * dbus/dbus-protocol.h (DBUS_ERROR_FILE_EXISTS): add file exists error
- * tools/dbus-cleanup-sockets.1: explain what the point of this thing is a bit more
- * autogen.sh (run_configure): add --config-cache to default configure args
- * dbus/dbus-internals.h (_DBUS_ASSERT_ERROR_IS_SET): disable the error set/clear assertions when DBUS_DISABLE_CHECKS is defined
- * tools/dbus-launch.c (main): if xdisplay hasn't been opened, don't try to save address, fixes crash in make check

2006-09-30 Thiago Macieira <thiago@kde.org>

- * configure.in: add DBUS_BINDIR as a #define to C source code.
- * tools/dbus-launch.c
- * tools/dbus-launch.h
- * tools/dbus-launch-x11.c:
- * tools/dbus-launch.1: Add the --autolaunch option to dbus-launch, which makes it scan for an existing session started with --autolaunch. With that option, it also creates an X11 window and saves the bus address and PID to it.
- * dbus/dbus-sysdeps.h:
- * dbus/dbus-sysdeps-unix.c (_dbus_get_autolaunch_address): Add a function that runs "dbus-launch --autolaunch" to retrieve the running D-Bus session address (or start one if none was running)
- * dbus/dbus-transport.c: Add the handler for the "autolaunch:"

address protocol, which tries to get the running session from dbus-launch.

- * dbus/dbus-bus.c:
- * dbus/dbus-internals.h: Make "autolaunch:" be the default D-Bus session bus address.

- * dbus/dbus-connection.c: Fix horrible typo in error message.

2006-09-18 John (J5) Palmieri <johnp@redhat.com>

- * tools/Makefile.am: use @EXPANDED_DATADIR@ instead of @DATADIRNAME@

2006-09-17 Havoc Pennington <hp@redhat.com>

- * dbus/dbus-transport.c (_dbus_transport_get_is_authenticated): fix so that if unix_user_function is set on windows, we still do the default check that the auth identity matches the bus identity

2006-09-16 Havoc Pennington <hp@redhat.com>

- * dbus/dbus-transport.c (_dbus_transport_open): modify to delegate to _dbus_transport_open_platform_specific, _dbus_transport_open_socket, and _dbus_transport_open_debug_pipe

- * dbus/dbus-transport-protected.h: add _dbus_transport_open_platform_specific

2006-09-16 Havoc Pennington <hp@redhat.com>

Attempt auditing public API to remove all cases where a Unix function returns weird emulated goo to Windows. This probably breaks the bus daemon on Windows, to fix it again we may need to stop processing unix-specific config options on Windows, and may need to add Windows-specific public API or config options.

- * configure.in (LT_CURRENT, LT_AGE): increment current and age, to reflect added interfaces; should not break soname.

- * dbus/dbus-transport.c (_dbus_transport_get_is_authenticated): do not invoke unix user function on Windows. Kind of a hacky fix, but we don't want a "unix uid" leaking out on Windows.

- * dbus/dbus-connection.c (dbus_connection_get_socket): add new API

to get the socket fd on Windows or UNIX
(dbus_connection_get_unix_fd): make this always fail on Windows

2006-09-16 Havoc Pennington <hp@redhat.com>

* dbus/dbus-server.c (dbus_server_listen): change how this works to be able to delegate to a set of handlers that can succeed, fail, or choose not to handle. Allows us to have dbus_server_listen_platform_specific.

* dbus/dbus-server-socket.c (_dbus_server_new_for_tcp_socket): factor out the tcp socket stuff to be used on windows, leaving unix domain socket only in dbus-socket-unix.c

* dbus/dbus-transport-socket.c
(_dbus_transport_new_for_tcp_socket): factor out the tcp socket stuff to be used on windows, leaving unix domain socket only in dbus-transport-unix.c

* dbus/dbus-connection.c (dbus_connection_get_unix_user): insert temporary hack to be sure this fails on windows
(dbus_connection_get_unix_process_id): ditto

2006-09-16 Havoc Pennington <hp@redhat.com>

* dbus/dbus-sysdeps-unix.c (_dbus_open_tcp_socket)
(_dbus_open_unix_socket, _dbus_open_socket): change API for _dbus_open_socket so the domain/type/protocol from system headers are not required. This is kind of pointless though unless we move part of _dbus_connect_tcp_socket into sysdeps.c instead of sysdeps-unix.c, which would mean adding a wrapper around bind/listen/etc.

Also, add DBusError to the socket-opening functions so they don't require use of errno.

2006-09-16 Havoc Pennington <hp@redhat.com>

* dbus/dbus-sysdeps-unix.h: small change to Peter's patch to make dbus-sysdeps-unix-util.c build, add unix-specific sysdeps header.

* dbus/dbus-sysdeps.h, dbus-sysdeps-unix.c: patch from Peter KÄmmel bug #8249 to make the sysdeps.h read/write/open/close functions specifically for sockets only, and move generic read/write/open/close into unix-specific code.

2006-09-14 Havoc Pennington <hp@redhat.com>

* dbus/dbus-transport-unix.c (unix_do_iteration): fix a valgrind complaint about accessing revents when poll returns 0, from Julian Seward.

2006-09-14 John (J5) Palmieri <johnp@redhat.com>

* Released 1.0 RC 1 (0.93)

2006-09-14 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-sysdeps-util-unix.c (_dbus_write_pid_file):
use _dbus_close instead of close

2006-09-14 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-sysdeps.c: Add support for LOCAL_CREDS socket
credentials. Fixes "external" authentication under e.g. NetBSD
which does not support any other socket credentials mechanism.
(Patch from Julio M. Merino Vidal <jmmv at NetBSD dot org>)

2006-09-14 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-threads.c: Allow recursive mutex's to be passed into
dbus_threads_init and be used by the dbus mutex functions to
avoid deadlocks.

* doc/TODO: Remove recursive mutex dbus_connection_dispatch TODO
item

2006-09-13 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-sysdeps-util-unix.c (_dbus_directory_get_next_file):
use threadsafe readdir_r instead of readdir

2006-09-13 John (J5) Palmieri <johnp@redhat.com>

* dbus-threads.c (dbus_threads_init_default): New method for
initializing the internal thread implementation (Patch from
Alexander Larsson <alexl at redhat dot com>)

2006-09-11 John (J5) Palmieri <johnp@redhat.com>

* remove a bunch of todo items from the 1.0 list

2006-09-11 John (J5) Palmieri <johnp@redhat.com>

* bus/activation.c, bus/desktop-file.c: Distinguish between OOM
and
key not found

2006-09-11 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-internal.c: Add dbus_is_verbose so we can have more
complex debugging code

* dbus/dbus-marshal-basic.c (_dbus_marshal_read_fixed_multi):
Move

between the test suite ifdefs
(_dbus_verbose_bytes): return if verbosity is not enabled

2006-09-11 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-marshal-recursive-util.c, dbus/dbus-marshal-recursive.c:
remove DBusMark

2006-09-10 Havoc Pennington <hp@redhat.com>

patch mostly by Peter KÄmmel, bug #8211

* dbus/dbus-sysdeps-unix.c: new file, which splits out
unix-specific stuff in dbus-sysdeps.c

* dbus/dbus-sysdeps.c: don't include any UNIX-only headers,
and move unix-specific stuff to dbus-sysdeps-unix.c

* configure.in: check HAVE_ERRNO_H

2006-09-08 John (J5) Palmieri <johnp@redhat.com>

* bus/test-main.c (main): Initialize threading during tests

* dbus/dbus-connection.c (_dbus_connection_new_for_transport):
Unlock connection on error
(generate_local_error_message): static method for generating
an error message when we don't have a message to reply to
(_dbus_connection_block_pending_call): Send a disconnect error
instead of just a timeout (NULL) when the bus gets disconnected
while blocking for a reply.

2006-09-08 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-connection.c (dbus_connection_dispatch): Properly
remove
filters (Patch from Kimmo HÄmÄlÄinen
<kimmo dot hamalainen at nokia dot com>)

2006-09-07 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-connection-internal.h: Add prototype for
_dbus_connection_test_get_locks to remove warning

2006-09-07 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-spawn.c (_dbus_spawn_async_with_babysitter): Make
sure we
close child_err_report_pipe[WRITE_END] on exec (Patch from
Kimmo HÄmÄlÄinen <kimmo dot hamalainen at nokia dot com>)

2006-09-07 John (J5) Palmieri <johnp@redhat.com>

* Clean up close calls to use `_dbus_close` (Patch from Kimmo Härmäläinen <kimmo dot hamalainen at nokia dot com>)

2006-09-06 John (J5) Palmieri <johnp@redhat.com>

* doc/TODO:

- Remove pending call locking todo item
- `_dbus_connection_open` now holds hard ref. Remove todo item
- do proper locking on `_dbus_bus_check_connection_and_unref` and handle `DBUS_BUS_STARTER`. Remove todo item
- Warn on closing of a shared connection. Remove todo item

* `bus/bus.c`, `bus/connection.c`, `bus/dispatch.c`, `dbus/dbus-bus.c`, `dbus/dbus-connection.c`: Use the `_dbus_connection_close_internal` so we don't get the warning when closing shared connections

* `test/test-service.c`, `test/test-shell-service.c`: Applications don't close shared connections themselves so we `unref` instead of `close`

* `test/test-utils.c` (`test_connection_shutdown`): Close the connection

* `dbus/dbus-bus.c` (`_dbus_bus_check_connection_and_unref`): Changed to

this `_dbus_bus_check_connection_and_unref_unlocked` since we only call

method on a locked connection.

Make sure we call `_dbus_connection_unref_unlocked` instead of `dbus_connection_unref` also.

Handle `DBUS_BUS_STARTER` correctly

* `dbus/dbus-connection.c` (`connection_record_shared_unlocked`): Mark as shared and hard ref the connection

(`connection_forget_shared_unlocked`): Remove the hard ref from the connection

(`_dbus_connection_close_internal_and_unlock`): New internal function

which takes a locked connection and unlocks it after closing it

(`_dbus_connection_close_internal`): New internal function which acts

like the original `dbus_connection_close` method by grabbing a connection

lock and calling `_dbus_connection_close_internal_and_unlock`

(`dbus_connection_close`): Public close method, warns when the app tries to close a shared connection

2006-09-06 John (J5) Palmieri <johnp@redhat.com>

* `bus/driver.c`:

(bus_driver_generate_introspect_string): New method for populating a DBusString with the introspect data
(bus_driver_handle_introspect): Move introspect generation code to bus_driver_generate_introspect_string

* bus/main.c:
(introspect): New function which prints out the introspect data and exits
(main): Add a --introspect switch

2006-09-06 John (J5) Palmieri <johnp@redhat.com>

* doc/TODO: Removed dtd publishing item.
It seems the dtd has already been added at
<http://www.freedesktop.org/standards/dbus/1.0/introspect.dtd>

2006-09-05 John (J5) Palmieri <johnp@redhat.com>

* doc/TODO, various source files: Audited todo's and FIXME's and prepended the ones we should be looking at with 1.0. Those prepended with 1.0? need clarification or might not be needed for 1.0

2006-09-05 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-pending-call.c: Add some checks so we don't crash on NULL in the public API (Patch from Kimmo Hamalainen <kimmo dot hamalainen at nokia dot com>)

2006-09-05 John (J5) Palmieri <johnp@redhat.com>

* configure.in: Fix for OS-X compile time endian issues (patch from Benjamin Reed <ranger at befunk dot com>)

2006-09-05 John (J5) Palmieri <johnp@redhat.com>

* configure.in: Check for no-common compiler flag (OS-X fix from Benjamin Reed <ranger at befunk dot com>)

2006-09-01 John (J5) Palmieri <johnp@redhat.com>

* tools/dbus-launch.c: Add a sigterm handler (patch from Frederic Crozat <fcrozat at mandriva dot com>)

2006-08-29 Havoc Pennington <hp@redhat.com>

* test/test-service.c (path_message_func): fix lack of return value

* dbus/dbus-sysdeps.c (_dbus_printf_string_upper_bound): fix formatting, remove #ifdef, and fix docs. #ifdef doesn't make any more sense than on anything else in this file.
(_dbus_get_tmpdir): add const to return value, and keep the results of the various getenv around in a static variable.

2006-08-29 Havoc Pennington <hp@redhat.com>

* dbus/dbus-sysdeps-util.c, dbus/dbus-sysdeps-util-unix.c: change from Ralf Habacker to move UNIX-specific sysdeps into a separate file.

2006-08-25 John (J5) Palmieri <johnp@redhat.com>

* test/Makefile.am: change find to use syntax that works with non gnu versions of find

2006-08-25 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-transport.c: fix invalid deref when checking if a vtable method exists (Patch from Christian Ehrlicher <ch dot ehrlicher at gmx dot de>)

2006-08-25 John (J5) Palmieri <johnp@redhat.com>

* configure.in, dbus/Makefile.am, test/name-test/run-test.sh, test/name-test/Makefile.am: Fixed some issues with getting get dbus to build with builddir != srcdir (Taken from a patch by Bernard Leak <bernard at brenda-arkle dot demon dot co dot uk>)

2006-08-25 John (J5) Palmieri <johnp@redhat.com>

* configure.in: Fix DBUS_DAEMONDIR to use EXPANDED_BINDIR for the default case

2006-08-25 John (J5) Palmieri <johnp@redhat.com>

* configure.ac, bus/Makefile.am: Generalize kqueue support so that it works on any system providing this interface, not only FreeBSD.
For example, NetBSD. (Patch by Julio M. Merino Vidal <jmmv at NetBSD dot org>)

2006-08-20 Havoc Pennington <hp@redhat.com>

* doc/dbus-faq.xml, doc/dbus-tutorial.xml: some improvements to

the docs

2006-08-18 John (J5) Palmieri <johnp@redhat.com>

* Released 0.92

2006-08-18 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-threads.c (dbus_threads_init): change the documentation to reflect the init late change

* bus/bus.c (bus_context_new): Check user before we fork so we can print out an error message a user will be able to see

2006-08-18 John (J5) Palmieri <johnp@redhat.com>

Patch provided by Ralf Habacker (ralf dot habacker at freenet dot de)

* dbus/dbus-sysdeps.c, dbus/dbus-threads.c, dbus/dbus-internals.h:

Add two more global locks for use on windows platforms. These are unused on non-windows platforms but are not ifdefed out to avoid potential bugs (i.e. the few bytes lost does not warrant the extra maintenance and complexity that having separate sets of locks would cause)

2006-08-18 John (J5) Palmieri <johnp@redhat.com>

* bus/services.c (bus_registry_acquire_service): Return an error when an application tries to register the org.freedesktop.DBus Bus Name

* bus/services.c (bus_registry_release_service): Return an error when an application tries to release the org.freedesktop.DBus Bus Name

2006-08-17 Alp Toker <alp@atoker.com>

* doc/dbus-specification.xml: Fix some minor typos.

2006-08-17 John (J5) Palmieri <johnp@redhat.com>

* configure.in: use \$with_init_scripts instead of \$operating_system to determine where to store the pid since the init scripts manipulate

the pid file (patch from Marcelo Ricardo Leitner
<marcelo dot leitner at terra dot com dot br>.

2006-08-16 John (J5) Palmieri <johnp@redhat.com>

```
* dbus/dbus-threads.c: Add static DBusList
*uninitialized_mutex_list and
    static DBusList *uninitialized_condvar_list to support new late
    initialization threading model. In this model threads can be
initialized
    even after the D-Bus API has been used but still needs to be
initialized
    before the second thread has been started. Mutexes and condvar
addresses
    are stored in the two static lists and are replaced with actual
locks
    when threads are initialized.
    (_dbus_mutex_new_at_location): New method for creating a mutex
and placing
    the location into the static list
    (_dbus_mutex_free_at_location): New method for removing a mutex
location
    from the static list and freeing the mutex
    (_dbus_condvar_new_at_location): New method for creating a
conditional
    variable and placing the location into the static list
    (_dbus_condvar_free_at_location): New method for removing a
conditional
    variable location from the static list and freeing the
conditional variable
    (init_uninitialized_locks): Atomic method which goes through the
static
    lists of mutex and condvar location and updates them with actual
locks
    (init_global_locks): changed to init_locks

* dbus/dbus-connection.c:
    (_dbus_connection_test_get_locks): New method for tests to check
connections
    (_dbus_connection_new_for_transport): Use the new at_location
mutex and
    condvar API
    (dbus_connection_allocate_data_slot): Pass in the global lock
address
    to _dbus_data_slot_allocator_alloc

* dbus/dbus-dataslot.c:
    (_dbus_data_slot_allocator_alloc): Use the address of the mutex
instead of the mutex itself

* dbus/dbus-message.c:
```

(dbus_message_allocate_data_slot): Pass in the global lock address
to _dbus_data_slot_allocator_alloc

* dbus/dbus-pending-call.c:
(dbus_pending_call_allocate_data_slot): Pass in the global lock address
to _dbus_data_slot_allocator_alloc

* dbus/dbus-server.c:
(_dbus_server_init_base): Use the new at_location mutex API
(dbus_server_allocate_data_slot): Pass in the global lock address
to _dbus_data_slot_allocator_alloc

* test/name-test/test-threads-init.c: New test case for late thread initialization

2006-08-14 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-dataslot.c (_dbus_data_slot_allocator_alloc):
Change _dbus_abort to _dbus_assert_not_reached because
_dbus_abort
causes compile problems when asserts are turned off
Keeping _dbus_warn for printing out the message so even if
asserts are turned off the user gets the messages that something
is
wrong

2006-08-14 John (J5) Palmieri <johnp@redhat.com>

Patches by Kjartan Maraas <kmaraas at gnome dot org>

* bus/services.c (bus_service_list_queued_owners):
Add a pointer cast to fix compiler warning

* dbus/dbus-dataslot.c (_dbus_data_slot_list_get):
return a NULL instead of FALSE since the return type
is not expecting a boolean

* dbus/dbus-marshal-basic.c (_dbus_marshal_test):
Remove unused variable

* dbus/dbus-marshal-recursive-util.c (node_new):
return a NULL instead of FALSE since the return type
is not expecting a boolean

* dbus/dbus-server-debug-pipe.c (_dbus_transport_debug_pipe_new):
Send a NULL into _dbus_transport_new_for_fd instead of a FALSE
because we are expecting a pointer not a boolean

* dbus/dbus-sysdeps-util.c (_dbus_get_tmpdir):

add void as the parameter so some compilers don't complain

- * dbus/dbus-transport-unix.c
(`_dbus_transport_new_for_domain_socket`,
`_dbus_transport_new_for_tcp_socket`):
Send a NULL into `_dbus_transport_new_for_fd` instead of a FALSE because we are expecting a pointer not a boolean
- * test/shell-test.c (`test_command_line`):
cast the second argument to `_dbus_list_append` to avoid compiler warnings
- * test/test-names.c (`main`): remove unused variable
- * test/test-service.c (`check_hello_from_self_reply`):
Initialize `echo_message` and `echo_reply` to NULL
- * test/test-shell-service.c (`handle_echo`):
Remove unused variable and cast the third parameter passed to `dbus_connection_get_object_path_data` to avoid compiler warnings
- * test/name-test/test-names.c (`clear_message_queue`):
Remove unused function
- * test/name-test/test-pending-call-dispatch.c:
Fix format string in `printf`

2006-08-14 John (J5) Palmieri <johnp@redhat.com>

- * dbus/dbus-bus.c:
- * test/name-test/test-names.c:
Remove test method `dbus_bus_connection_get_unique_name` because we already have public method `dbus_bus_get_unique_name` that does the exact same thing

2006-08-10 John (J5) Palmieri <johnp@redhat.com>

- * dbus/dbus-signature.c:
fix typos in Julio's previous patch which cause make check to fail

2006-08-10 John (J5) Palmieri <johnp@redhat.com>

- * dbus/dbus-address.c (`_dbus_address_test`): Revert leaking `strcmp`.
In any case it was wrong since this is a test checking to see if address parsing is correct. There was no need to get the true tmp directory.

2006-08-10 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-macros.h: Revert the addition of stddef.h
as we should not be adding it to library headers

2006-08-10 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-signature.c:
Fix the unit tests so that they work if assertions are not
enabled.
(patch from Julio M. Merino Vidal <jmmv at NetBSD dot org>)

2006-08-10 John (J5) Palmieri <johnp@redhat.com>

* tools/run-with-tmp-session-bus.sh:
* test/name-test/run-test.sh:
Remove bashisms (patch from Julio M. Merino Vidal
<jmmv at NetBSD dot org>)

2006-08-10 John (J5) Palmieri <johnp@redhat.com>

* configure.in: add a version (>= 2.6.0) check for libxml2

2006-08-10 John (J5) Palmieri <johnp@redhat.com>

* configure.in: make sure the compiler supports -Wfloat-equal

* bus/dir-watch-dnotify.c: move functional code after
variable declarations (C99 fix) (patches from Jens Granseuer
<jensgr at gmx dot net>)

2006-08-10 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-macros.h:
add #include <stddef.h> so that Sun compilers don't complain
about
the defining NULL

2006-08-10 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-sysdeps.c:
* dbus/dbus-address.c:
* bus/activation.c:
* test/shell-test.c:
don't hardcode tmp directory (patch from Dave Meikle
<dmk at davemeikle dot co dot uk>)

2006-08-09 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-dataslot.c (_dbus_data_slot_allocator_alloc):
Change an assert to a detailed warning and abort.
When allocator->lock != mutex it indicates that the user has
failed

to initialize threads before using the D-Bus library. This warning helps the user identify the issue and fix their app.

2006-08-08 John (J5) Palmieri <johnp@redhat.com>

These are all patches from Kjartan Maraas <kmaraas at gnome dot org>

with cleanups of bugs found from Coverity reports:

- * dbus/dbus-sysdeps-util.c (_dbus_write_pid_file): close the file on error to avoid a leak

- * bus/expirelist.c (bus_expire_list_test): Check for NULL on dbus_new0

- * bus/activation.c (update_directory): remove dead code

- * bus/config-parser.c (merge_service_context_hash, start_selinux_child): Fix some leaks

- * bus/bus.c (process_config_every_time): Fixed a leak

- * bus/desktop-file.c (parse_key_value): Fixed leak

- * bus/selinux.c (bus_selinux_id_table_insert): Fixed leak

2006-08-08 John (J5) Palmieri <johnp@redhat.com>

- * dbus/dbus-object-tree.c (_dbus_object_subtree_new): remove dead code

2006-08-08 John (J5) Palmieri <johnp@redhat.com>

- * tools/run-with-tmp-session-bus.sh: use #!/bin/sh instead of #!/bin/bash

2006-08-08 John (J5) Palmieri <johnp@redhat.com>

- * Doxyfile.in: fix the INPUT line so we can generate docs when sourcedir != builddir (patch from Cygwin Ports maintainer <yseikowitz at users dot sourceforge dot net>

2006-08-08 John (J5) Palmieri <johnp@redhat.com>

- * dbus/dbus-sysdeps.h:
- * dbus/dbus-sysdeps.c:

* dbus/dbus-string.c:
s/_dbus_printf_length/_dbus_printf_string_upper_bound to conform
with
GLib's function which does the same thing

* configure.in:
* bus/Makefile.am:
* bus/dir-watch-default.c:
* bus/dir-watch-dnotify.c:
* bus/dir-watch-kqueue.c:
Add kqueue directory watching for freebsd and split the directory
watching code into separate files per method/arch
(patches from Timothy Redaelli <drizzt at gufi dot org>)

2006-08-08 John (J5) Palmieri <johnp@redhat.com>

* configure.in:
* tools/Makefile.am:
* tools/dbus-launch.c:
* bus/Makefile.am:
allow --with-dbus-daemon-dir switch to be used to make the
daemon install to a separate bindir like /usr/libexec
(patch from Brian Cameron <brian dot cameron at sun dot com>)

2006-08-08 John (J5) Palmieri <johnp@redhat.com>

* bus/Makefile.am (install-data-hook): removed the slash after
\$(DESTDIR) so we don't get the double slash which does not work
in windows (patch from Andras Porjesz
<andras dot porjesz at siemens dot com>)

2006-08-08 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-sysdeps.h:
* dbus/dbus-sysdeps.c:
add _dbus_printf_length (patch from Peter Kämmel
<syntheticpp at gmx dot net>)

2006-08-08 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-internals.c: unistd.h is not used
(_dbus_verbose_real): only enable verbose printing
if DBUS_VERBOSE environment var is set to '1'
(patch from Peter Kämmel <syntheticpp at gmx dot net>)

2006-08-08 John (J5) Palmieri <johnp@redhat.com>

* configure.in: add a GCC flag check for -Wdeclaration-after-
statement
so we still compile on older gcc (patch from Frederic Peters
<fpeters at 0d dot be>)

2006-08-04 Havoc Pennington <hp@redhat.com>

- * configure.in: add -Wdeclaration-after-statement
- * dbus/dbus-connection.c: change all the pending call stuff to reflect the fact that pending call operations use the connection lock
- * dbus/dbus-pending-call.c: add locking here
- * dbus/dbus-errors.c (struct DBusRealError): don't make the name field const consistent with how message field is done

2006-08-03 John (J5) Palmieri <johnp@redhat.com>

- * s/D-BUS/D-Bus/g

2006-08-03 John (J5) Palmieri <johnp@redhat.com>

- * dbus/dbus-object-tree.c: Patch by Benjamin Otte <in7yl18 at public.uni-hamburg dot de> - fix invalid read/write reported by valgrind

2006-07-24 John (J5) Palmieri <johnp@redhat.com>

- * Released 0.91

2006-07-22 John (J5) Palmieri <johnp@redhat.com>

- * dbus/dbus-connection.c:
(_dbus_connection_attach_pending_call_unlocked):
(connection_timeout_and_complete_all_pending_calls_unlocked):
Make sure we set timeout_added on pending calls to FALSE when we remove the timeout from the connection

2006-07-21 John (J5) Palmieri <johnp@redhat.com>

- * Removed some extra bindings stuff lingering around (thanks timo)
- * dbus-pendingcall.c (_dbus_pending_call_new):
s/dbus_connection_ref/_dbus_connection_ref_unlocked fixes
assertion
when we tried to take a lock on an already locked connection

2006-07-17 John (J5) Palmieri <johnp@redhat.com>

- * Released 0.90

2006-07-17 Havoc Pennington <hp@redhat.com>

- * dbus/dbus-marshall-basic.c (_dbus_type_to_string): support 64-bit

ints, reported by Owen Taylor

2006-07-17 John (J5) Palmieri <johnp@redhat.com>

- * doc/TODO:
- * dbus/dbus-bus.c:
- * dbus-errors.c:
- * dbus/dbus-marshall-validate.c:
Removed TODO items which were fixed or are no longer relevant

2006-07-17 John (J5) Palmieri <johnp@redhat.com>

- * dbus-gt4-1.pc.in, dbus-sharp.pc.in:
Remove stray files from the stripped bindings

2006-07-16 Havoc Pennington <hp@redhat.com>

- * dbus/dbus-pending-call.c
(_dbus_pending_call_set_timeout_error):
Improve the error message on reply timeout

2006-07-14 John (J5) Palmieri <johnp@redhat.com>

- * Remove all bindings

2006-07-13 John (J5) Palmieri <johnp@redhat.com>

- * dbus-connection.c (dbus_connection_send_with_reply): return TRUE
and set pending_reply out arg to NULL if connection is disconnected
(connection_timeout_and_complete_all_pending_calls_unlocked): New static method for cleaning up pending calls on disconnect
(_dbus_connection_get_dispatch_status_unlocked): If we have pending calls queued timeouts on disconnect
- * dbus/dbus-pending-call.c (_dbus_pending_call_set_connection):
Remove

2006-07-13 Carlos Garcia Campos <carlosgc@gnome.org>

- * bus/activation.[ch] (bus_activation_list_services): new function to
get the list of services that can be activated
- * bus/dispatch.c: test coverage for the new bus method
ListActivatableNames
- * bus/driver.c: new bus method ListActivatableNames to get the list of
services that can be activated

* doc/dbus-specification.xml: ListActivatableNames method documentation

2006-07-12 John (J5) Palmieri <johnp@redhat.com>

* dbus/Makefile.am: add dbus-pending-call-internal.h to the list of source files

2006-07-12 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-message-factory.c:
Fix index into an array (patch by Peter KÄmmel <syntheticpp at gmx.net>)

2006-07-12 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-connection-internal.h:
* dbus/dbus-connection.c:
* file dbus/dbus-pending-call.c:
* dbus/dbus-pending-call.h:
Make DBusPendingCall an opaque type even to D-Bus internals

2006-07-07 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-connection.h: remove connection_disconnect and replace with connection_close

* dbus/dbus-connection.c: include dbus-bus.h
(_dbus_connection_read_write_dispatch): make static

2006-07-07 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-connection.c (dbus_connection_close): removed deprecated function
(dbus_connection_dispatch): On disconnect unref any shared connections

* dbus/dbus-bus.c (_dbus_bus_check_connection_and_unref): new function for cleaning up shared connections on disconnect
(internal_bus_get): get a hard reference to shared connections when they are created

* doc/TODO: Remove items which are no longer relevant or have been fixed
Split 1.0 todo items with a 0.90 freeze todo list

2006-06-14 Ross Burton <ross@openedhand.com>

* glib/dbus-gobject.c:

Free a leaking GArray (surely not!) in dbus_g_method_return.

2006-06-14 Ross Burton <ross@openedhand.com>

- * tools/Makefile.am:
- * tools/dbus-monitor.c:
Don't use the GLib bindings in dbus-monitor (patch from Ralf Habacker).

2006-06-14 Ross Burton <ross@openedhand.com>

- * tools/dbus-print-message.c:
Also print the object path when outputting signals or method calls.

2006-06-13 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/src/Makefile.am: install the qdbus.h header.
This allows people to actually use the installed code.

2006-06-12 Ross Burton <ross@openedhand.com>

- * glib/dbus-gproxy.c:
Don't leak a GArray when firing signals (thank Rob Taylor for review).

2006-06-12 Thiago Macieira <thiago.macieira@trolltech.com>

- * Released 0.62

2006-06-12 Thiago Macieira <thiago.macieira@trolltech.com>

- * dbus/dbus-arch-deps.h.in: Remove spurious semi-colons that break pedantic builds. Closes bug 6043 (patch approved by Havoc back in February).

2006-06-12 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/src/qdbusintegrator.cpp: Fix bug in parsing async methods that took a QDBusMessage parameter.
- * qt/src/qdbusbus.h: Add a default flag for RequestName.
- * qt/tools/dbus.cpp: Don't use automatic call because we might be calling an async method: request a reply.

2006-06-11 Thiago Macieira <thiago.macieira@trolltech.com>

- * test/qt/*: Update the testcases, including testing the new functionality of sending null QByteArray and QString over the bus. Add new headertest test and restore the old qdbusxmlparser test.

2006-06-11 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/tools/dbuscpp2xml.cpp: Compile on Windows.
- * qt/tools/dbusidl2cpp.cpp: Add missing newline.

- * qt/examples/Makefile.am:
- * qt/examples/chat.h: Use UI-generated files with the ui_*.h form.

- * qt/src/qdbusmarshall.cpp: Allow sending of QString() and QByteArray() (nulls) over the bus.
- * qt/src/qdbusabstractinterface.cpp: Use the correct variable, the one that has the signature suffix stripped.
- * qt/src/qdbusreply.h: Make some methods const.

2006-06-09 Thiago Macieira <thiago.macieira@trolltech.com>

Patch from Timo Hoenig <thoenig@suse.de>.

- * qt/dbus/Makefile.am: New file. Fix "make dist", add all headers required during build to EXTRA_DIST.
- * qt/src/Makefile.am: Fix "make dist", add 'qdbus.h' to EXTRA_DIST.
- * qt/Makefile.am: Fix "make dist", add 'dbus' to DIST_SUBDIRS.
- * configure.in: Fix "make dist", take care that the Makefile for qt/dbus is being generated.

2006-06-07 John (J5) Palmieri <johnp@redhat.com>

- * bus/bus.c: Fix eavesdropping on method calls

2006-06-07 John (J5) Palmieri <johnp@redhat.com>

- * configure.in:
- * dbus/dbus-userdb-util.c:

Add Solaris console owner patch from Artem Kachitchkine

2006-06-07 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/Makfile.am:
- * qt/src/Makefile.am: Fix the EXTRA_DIST after the reorganisation. Thanks to Timo Hoenig for pointing this out.

2006-06-06 Robert McQueen <robot101@debian.org>

- * glib/dbus-gtype-specialized.c: Fix obvious leak of GArray in every call to dbus_g_type_get_struct.

2006-06-06 Robert McQueen <robot101@debian.org>

* glib/dbus-gvalue-utils.c: Fix the failing test where static string pointers were put into a GPtrArray-based specialised collection, and then freed along with the array. GValues which you add into collections or maps which have the NOCOPY flag set are assumed to not belong to the caller, so rather than the existing pointer-stealing semantics, they are copied instead. Given that the main consumers of this abstraction are the bindings themselves, I don't think this is too bad, but others should watch their choice of take vs set_static.

2006-06-06 Robert McQueen <robot101@debian.org>

* glib/dbus-gvalue-utils.c: Spotted a warning about the return value of g_slist_prepend not being used. Fixed copying of slist-based specialised collections, then wrote a test case and found that it was all broken. Went on to fix iterating and appending too. Good thing nobody uses this code yet.

2006-06-06 Robert McQueen <robot101@debian.org>

* glib/dbus-gvalue-utils.c: Remove duplicated code by having all of the iterators use gvalue_take_ptrarray_value (the GValues themselves are discarded without unsetting, so it makes no difference whether we take or set_static). Remove cases for G_TYPE_POINTER because there really is nothing useful we can do with them in our specialised types -we *need* boxed copy/free functions at the very least.

2006-06-05 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/dbus: Add directory. I had forgotten to add this yesterday after the move...

* qt/examples/Makefile.am:

* qt/examples/dbus.cpp: Moved to qt/tools/dbus.cpp.

* qt/tools/Makefile.am:

* qt/tools/dbus.cpp: Moved from qt/examples/dbus.cpp. Added feature to get and set properties.

Added validation of service, object path and interface names.

* qt/tools/dbusidl2cpp.cpp: Two new features:

1) Allow specifying both the header and the source file names, by separating them with a colon.

2) Don't write an interface output if the -p switch wasn't given, but the -a was.

* qt/src/*: Fix usage of Iterators and ConstIterators.

Fix shadowing of variables by other variables (-Wshadow).

Fix keyword-cleanliness in headers.

Fix ASCII-cast (QLatin1String, QLatin1Char).

Fix validation of member names.

Add extra checking of introspection data during XML parsing.

Various bug fixes.

2006-06-04 Thiago Macieira <thiago.macieira@trolltech.com>

* dbus/Makefile.am:

* dbus/qdbus.h: Remove unnecessary file. This is mirrored into qt/dbus/qdbus.h now.

2006-06-04 Thiago Macieira <thiago.macieira@trolltech.com>

* configure.in: Make --disable-qt actually do something. Patch inspired by Zack Rusin.

2006-06-04 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/: Update to Subversion r548032.

This includes a big reorganisation of the files inside the subdir.

2006-05-30 Sjoerd Simons <sjoerd@luon.net>

* dbus/dbus-sysdeps.c: Make tcp socket connection error somewhat more

clear:

"Failed to connect to socket <host>:<port> <error>" instead of
"Failed to connect to socket <host>: <error>:<port>"

* dbus/dbus-transport-unix.c: Fix crash when no host option is given
for a tcp transport.

2006-05-29 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/*: Update the QtDBus bindings up to revision 546310 in Subversion.

This adds the dbuscpp2xml tool, that parses a C++ header and outputs a D-BUS Introspection XML.

2006-05-21 Havoc Pennington <hp@redhat.com>

* glib/dbus-gproxy.c: Put in a pile of assertions that the proxy name is not NULL when it shouldn't be. Also a couple of possible fixes for #4637 though I don't understand why the bug happens, to be honest... also the object constructor has an assert name != NULL and the name is only currently NULL for peer-to-peer proxies that I don't think anyone uses? So it should be asserting. Anyway, for now at least see if we get an earlier assertion failure.

* glib/dbus-gvalue-utils.c: Put in a couple of assertions for apparently broken code to be sure the tests fail and someone will fix them...

2006-05-07 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/qdbusmarshall.cpp: Fix a problem of demarshalling lists and arrays when they had a single element: has_next returns false, even before you read the element. So, instead, check the array length.

2006-05-06 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/qdbusmessage.cpp:
* qt/qdbustypehelper_p.h:
* qt/qdbusintegrator.cpp: gcc 3.4 doesn't like Q_FOREACH when the list is a const-reference

2006-05-03 John (J5) Palmieri <johnp@redhat.com>

* Adding old doc patch that never got applied
* dbus/bus.c (dbus_bus_add_match): Add documentation
* doc/dbus-specification.xml: Add documentation for the match rules and the AddMatch and RemoveMatch methods

2006-05-02 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/dbusidl2cpp.cpp: There's no callAsync. Use the correct call (r535506)
* qt/dbusidl2cpp.cpp:
* qt/qdbusabstractadaptor.cpp:
* qt/qdbusabstractadaptor.h: Make QDBusAdaptorConnector be a sibling of the QDBusAbstractAdaptor objects instead of the parent. (r535848)
* qt/dbusidl2cpp.cpp:

- * qt/qdbusabstractinterface.cpp:
- * qt/qdbusabstractinterface.h:
- * qt/qdbusabstractinterface_p.h:
- * qt/qdbusinterface.cpp: Make properties in interfaces actually work. The code that was generated would not compile, due to moc calls to functions that did not exist. They now shall. (r536571)

2006-04-30 Thiago Macieira <thiago.macieira@trolltech.com>

- * Makefile.am:
- * configure.in:
- * dbus-qt4-1.pc.in: Add a pkg-config file for libdbus-qt4-1. Thanks to Brad Hards for providing the patch

2006-04-29 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/dbusidl2cpp.cpp: There's no callAsync. Use the correct call. (r535506)

2006-04-29 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/examples/dbus.cpp: Enhance error messages and use QDBusInterfacePtr.

2006-04-29 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/qdbusinterface.h: Rename QDBusRef to QDBusInterfacePtr and disable the copy operators. (r533772, r534746)
- * qt/qdbuserror.h: Remove the automatic cast to bool. (r533929)
- * qt/qdbusabstractinterface.cpp:
- * qt/qdbusabstractinterface.h: Change the default call mode to not use the event loop. Add convenience call() methods that take a CallMode parameter. (r534042)
- * qt/qdbusconnection.h: Change the default call mode to not use the event loop. (r534042)
- * qt/qdbusinterface.cpp:
- * qt/qdbusinterface.h: Add a method to tell us if the interface is valid (since we don't return a null pointer anymore) (r534099)
- * qt/qdbusinterface_p.h: Don't crash if metaObject is 0 (r534101)
- * qt/qdbusinternalfilters.cpp: Decouple the introspection function in two so taht we get the chance to introspect without having a QDBusMessage (r534102)

* qt/qdbusbus.h:
* qt/qdbusconnection.cpp:
* qt/qdbusconnection_p.h:
* qt/qdbusintegrator.cpp: Keep a list of our own names to avoid a round-trip to the server when attempting to introspect one of our own objects. Also make sure the filter functions match the empty interface as well. (r534108)
Don't keep the connection names. Instead, trust the unique connection name (r534111)
Remove event loop usage (r534112)

2006-04-29 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/qdbusintegrator.cpp: Fix assertion failure spotted by Brad Hards.

2006-04-28 Robert McQueen <robot101@debian.org>

* glib/dbus-gproxy.c: Fix properties so that they can be given in any order, making it easier for people who inherit from this object.

2006-04-28 Robert McQueen <robot101@debian.org>

* glib/dbus-gvalue-utils.c: Patch from Jakub Stachowski to fix leaking of memory from within pointer arrays and lists. Fixes bug #6300.

2006-04-28 Robert McQueen <robot101@debian.org>

* glib/dbus-gvalue.c: Patch from Jakub Stachowski to fix a leak in generating struct signatures. Fixes bug #6083.

2006-04-28 Robert McQueen <robot101@debian.org>

* qt/Makefile.am: Tweak CLEANFILES from qdbusconnection.moc to qdbusconnection_p.moc.

2006-04-24 John (J5) Palmieri <johnp@redhat.com>

* README, INSTALL: Doc fixes
Patch from Brad Hards <bradh at frogmouth.net>

2006-04-23 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/examples/dbus.cpp: Use the new merged-interface mode for the dynamic meta object. No need to guess which interface to call.

2006-04-23 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/qdbusconnection_p.h:
* qt/qdbusmetaobject.cpp:
* qt/qdbusmetaobject_p.h:
* qt/qdbusintegrator.cpp: Use the new merged-interface mode for the dynamic meta object. No need to guess which interface to call.
* qt/qdbusabstractinterface_p.h:
* qt/qdbusconnection.cpp:
* qt/qdbusintegrator.cpp:
* qt/qdbusinterface.cpp:
* qt/qdbusinterface.h: Make findInterface always return a non-null pointer.
Add a QDBusRef that looks and behaves like DCOPRef.

2006-04-23 Thiago Macieira <thiago.macieira@trolltech.com>

* dbus/dbus-connection.c: Interfaces are optional in method calls, so don't give up if the interface parameter is NULL. Patch reviewed by Havoc Pennington.

2006-04-23 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/qdbusreply.h: Add default constructor and operator= (r532625)
* qt/qdbustypehelper_p.h: Use a clean namespace: no foreach() in public headers (r532952)
* qt/qdbusabstractinterface.cpp:
* qt/qdbusabstractinterface_p.h: Add the AutoDetect mode and make it the default (r532951)

2006-04-19 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-connection.c: Fix asserts
Patch from Tim Moloney <t.moloney at verizon.net>

2006-04-19 John (J5) Palmieri <johnp@redhat.com>

* mono/Connection.cs, mono/Message.cs: Check Target type
Patch from Aaron Bockover (abockover at novell.com)

2006-04-13 Thiago Macieira <thiago.macieira@trolltech.com>

* INSTALL: fine-tune the requirements for the Qt4 binding.

2006-04-16 Daniel P. Berrange <dan@berrange.com>

* tools/dbus-print-message.c: Added support for printing of all remaining data types. Fixed logic for indentation of compound data types.

2006-04-15 Daniel P. Berrange <dan@berrange.com>

* INSTALL: fill out content of file providing DBus specific build installations, followed by generic Auto* INSTALL file content

2006-04-13 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/qdbusintegrator.cpp: Work around g++ 3.3 bug.
Patch by Stefan Eilers. (r529537)

2006-04-13 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/qdbusinternalfilters.cpp: Don't show the parent's contents (r528208)

2006-04-10 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/Makefile.am: fix the dependency for qdbusconnection_p.moc. It's included in qdbusintegrator.cpp, not in qdbusconnection.cpp.
Thanks to Jakub Stachowski <stachowski@hypair.net> for spotting this.

2006-04-10 Thiago Macieira <thiago.macieira@trolltech.com>

* qt/examples/listnames.cpp:
* qt/examples/Makefile.am: Three ways to list the names on the bus.

2006-04-10 Thiago Macieira <thiago.macieira@trolltech.com>

* test/qt/tst_hal.cpp: Remove the waiting, since it's not needed anymore. Requires Qt 4.1.3 to work properly.
(r528148)

2006-04-10 Thiago Macieira <thiago.macieira@trolltech.com>

Merge from Subversion:

* qt/qt-dbus.qdocconf: Update Trolltech's webpage link to something that exists (r526315)
* qt/qdbusinternalfilters.cpp: Correctly detect non-scriptable slots/signals (r526316)
* qt/qdbusinternalfilters.cpp: Fix the setProperty call and also return an unknown-method error if the parameters don't match for org.freedesktop.DBus.Properties. (r526842)
* qt/examples/dbus.cpp: Allow passing of QVariants (r526843)
* qt/qdbusintegrator.cpp: Restore the proper order of delivery: don't make method returns be delivered on priority (r528150)

2006-03-28 Thiago Macieira <thiago.macieira@trolltech.com>

* configure.in qt/Makefile.am: add qt/examples

- * qt/examples: Add QtDBus example programs:
 - hello: Hello, World
 - ping: Simple method-calling program
 - pong: Simple object-exporting program (not using adaptors)
 - complexping: Interactive method-calling program (also gets and sets properties).
 - complexpong: Sample program exporting methods, signals and properties, using adaptors.
 - dbus: Simple implementation of a generic method-calling program, similar to 'dbus-send', but with semantics similar to 'dcop'.
 - chat: Simplistic chat program, implemented using signals and the system bus. Looks like IRC.

2006-03-28 Thiago Macieira <thiago.macieira@trolltech.com>

- * configure.in: Detect QtGui (necessary for one of the example programs). Note: this increases the minimum required version of Qt to 4.1.3.

2006-03-28 Thiago Macieira <thiago.macieira@trolltech.com>

- * test/qt/*: Sync with KDE Subversion revision 523647. Update the testcases to the new API. Remove testcases for classes that are no longer public or have been removed.

2006-03-28 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/*:
 - * dbus/qdbus.h: Sync with KDE Subversion revision 523647. Hopefully, this will be the last of the source-incompatible changes. Documentation has been improved; support for QList<basic-types> has been added; QDBusObject is gone; QDBus(Abstract)Interface is now a QObject with auto-generated meta-object; QDBusIntrospection is marked private, since QMetaObject can be used now; lots of bugfixes.

2006-03-16 John (J5) Palmieri <johnp@redhat.com>

Patch from Milosz Derezynski <internalerror at gmail.com>

- * configure.in:
 - Output the service directory in the configure summary
- * dbus-1.pc.in:
 - Add session_bus_services_dir

2006-03-10 Ross Burton <ross@openedhand.com>

- * tools/dbus-print-message.c:
 - Add support for object paths and signatures.

2006-03-06 Sjoerd Simons <sjoerd@luon.net>

- * bus/bus.c: (bus_context_reload_config): Flush the user database cache on config reload.
- * bus/dbus-daemon.1.in: Also note that SIGHUP flushes the user/group information caches
- * dbus/dbus-hash.c: (_dbus_hash_table_remove_all):
- * dbus/dbus-hash.h: Add function to remove all entries from a hash table
- * dbus/dbus-userdb.c: (_dbus_user_database_flush):
- * dbus/dbus-userdb.h: Add function to flush all user/group information caches.

2006-03-06 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/dbusidl2cpp.cpp:
- * qt/Makefile.am: add the dbusidl2cpp tool, the replacement for dcopyidl2cpp, found in the KDE installations (or the more modern kalyptus): generate Qt4 C++ code for the input XML introspection. Currently no IDL parsing.

2006-03-06 Thiago Macieira <thiago.macieira@trolltech.com>

- * test/qt/*: Update the self-tests.

2006-03-06 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/*:
- * dbus/qdbus.h: Sync with KDE Subversion revision 516237. This represents the first feature-complete version of the Qt4 bindings since I took over maintainership.

2006-03-06 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/Doxyfile: Adding a Doxyfile for the Qt4 bindings dir. This is C++, so we can't use the Dbus ones.

2006-03-02 John (J5) Palmieri <johnp@redhat.com>

- * python/dbus_bindings.pyx: Remove reference to sys/cdefs.h (Patch from Artem Kachitchkine <Artem.Kachitchkin at Sun.COM>)

2006-03-02 John (J5) Palmieri <johnp@redhat.com>

- * dbus/dbus-connection.c: (_dbus_connection_block_pending_call): Check to see if our data has already been read off the connection by another blocking pending call before we block in poll. (check_for_reply_and_update_dispatch_unlocked):

Code taken from `_dbus_connection_block_pending_call` - checks for an already read `reply` and updates the `dispatch` if there is one.

* `test/name-test/test-pending-call-dispatch.c`:
New test for making sure we don't get stuck polling a `dbus` connection which has no data on the socket when blocking out of order on two or more pending calls.

2006-02-28 Thiago Macieira <thiago.macieira@trolltech.com>

* `qt/Makefile.am`: Patch by Sjoerd Simons. More `.moc` issues: `make/automake` don't detect that we're talking about the same `.lo` file if I specify the full path to the source files.

2006-02-26 Havoc Pennington <hp@redhat.com>

* `bus/dbus-daemon.1.in`: improve the language in a couple spots I noticed

* `dbus/dbus-bus.c` (`internal_bus_get`): in the error message if the session bus variable is unset, suggest "man `dbus-launch`" and "man `dbus-daemon`" to figure out how to fix the problem

2006-02-25 Havoc Pennington <hp@redhat.com>

* `glib/dbus-glib-tool.c` (`usage`): fix up the usage message, someone should make this thing use the new `glib` options parser

2006-02-25 Thiago Macieira <thiago.macieira@trolltech.com>

* `qt/Makefile.am`: Patch by Sjoerd Simons. Fix the path to the `.lo` files taking `moc` sources.

2006-02-25 Havoc Pennington <hp@redhat.com>

* `dbus/dbus.h`, `dbus/Makefile.am`: add `dbus-signature.h` to `dbus.h` and install it as a public header

2006-02-24 John (J5) Palmieri <johnp@redhat.com>

* Released 0.61

2006-02-24 John (J5) Palmieri <johnp@redhat.com>

* `proxies.py`: Fix the callchain

2006-02-24 John (J5) Palmieri <johnp@redhat.com>

* patch from Sjoerd Simons <sjoerd at debian.org>:

* `dbus/dbus-sysdeps-util.c` (`_dbus_group_info_free`): Moved to

dbus/dbus-sysdeps.c

- * dbus/dbus-userdb.c (`_dbus_group_info_free_allocated`): Don't call `_dbus_group_info_free_allocated` which causes infinite loop, correctly call `_dbus_group_info_free`

2006-02-20 Thiago Macieira <thiago.macieira@trolltech.com>

- * qt/qdbusinterface_p.h:
- * qt/qdbusinterface.cpp: Use the standard `org.freedesktop.DBus.Method.NoReply` annotation for the "async" calls instead of creating one for us.

- * qt/qdbusconnection_p.h:
- * qt/qdbusintegrator.cpp: Remove debugging code.

- * qt/qdbusintegrator.cpp:
- * qt/qdbusmessage.cpp:
- * qt/qdbusmessage_p.h:
- * qt/qdbusmessage.h: Change the behaviour of automatic reply-sending: now a reply is always sent, unless the caller didn't request one or if the user slot has already sent one.

2006-02-16 Robert McQueen <robot101@debian.org>

- * `configure.in`: Patch from Debian packages by Sjoerd Simons <sjoerd@debian.org> to add `--with-qt-moc` and `--with-qt3-moc` arguments so it's possible to build both bindings in the same tree.

- * `qt/Makefile.am`: Fix truncated value so that `make dist` works.

2006-02-16 Robert McQueen <robot101@debian.org>

- * `acinclude.m4`, `configure.in`: Patch from Brad Hards <bradh@frogmouth.net> to avoid warnings from `autoconf 1.9` by improving quoting, re-ordering a few checks, and a few other aesthetic tidy-ups.

2006-02-16 Robert McQueen <robot101@debian.org>

- * `dbus/dbus-message.c` (`dbus_message_iter_get_fixed_array`): Patch from Rob Taylor <rob.taylor@collabora.co.uk> to correct a bogus assertion that the next element to read from the iter is fixed in size. This is not the case when you are at the end of the iter, because the next element type is `INVALID`.

- * `dbus/dbus-string.c` (`_dbus_string_init_const_len`): Correct a bogus assert which means that you may not initialise a 0-length string unless you provide a non-NULL pointer. This prevented you from marshalling messages containing zero-length arrays in

some cases.

* glib/dbus-gvalue.c (demarshal_collection_array): Another patch from Rob to correct bogus asserts when trying to demarshal an array and get_fixed_array got you 0 elements. Append nothing to the GArray in this case.

* test/glib/test-dbus-glib.c: Add a test case for round-tripping an empty array via the glib bindings. Without all of the above patches, this new test fails.

2006-02-16 Robert McQueen <robot101@debian.org>

* glib/dbus-gmain.c: Make the previous commit compile.

* python/_dbus.py, python/matchrules.py: Patch from Ole Andre Ravnaas <ole.andre.ravnaas@collabora.co.uk> to allow you to specify sender_keyword="foo", path_keyword="bar" when adding a signal listener, so that you can bind to signals generically but still do something useful in your callback.

* python/dbus_bindings.pyx: Demarshal the byte type as unsigned chars so that they're not cast to chars and made negative. Thanks to Jakub Stachowski for reporting this and testing the fix.

2006-02-15 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-glib.h:

* glib/dbus-gmain.h:

(dbus_g_connection_open): new method for opening a connection to an arbitrary address in the glib bindings

* ChangeLog: checkin last entry which doesn't seem to be committed

2006-02-13 John (J5) Palmieri <johnp@redhat.com>

* tools/dbus-launch.c: Fixed sh syntax output

2006-02-13 Robert McQueen <robot101@debian.org>

* glib/dbus-binding-tool-glib.c, glib/dbus-gmain.c, glib/dbus-gsignature.c, glib/dbus-gtype-specialized.c, glib/dbus-gtype-specialized.h, glib/dbus-gvalue-utils.c, glib/dbus-gvalue-utils.h, glib/dbus-gvalue.c:

Patch from Rob Taylor <rob.taylor@collabora.co.uk> to add a big missing piece of the glib bindings jigsaw puzzle. This modifies the existing specialised types to have N type parameters (rather than the current 1 or 2 for arrays and dictionaries respectively).

You can then use this to get a glib type to represent any arbitrary

D-Bus struct type using dbus_g_type_get_struct. The only

implementation of these types is with GValueArrays as before, but it's now possible to store these in arrays, emit them in signals, etc.

2006-02-10 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-signature.c (dbus_signature_iter_recurse): Correctly deal with nested arrays (Bug #5823) Patch by Thiago Macieira <thiago.macieira at trolltech.com>

2006-02-10 John (J5) Palmieri <johnp@redhat.com>

* mono/doc/Makefile.am: Fix parallel make problem with mono-doc (Bug #4213) Patch from Doug Goldstein <cardoe at gentoo.org>

2006-02-10 John (J5) Palmieri <johnp@redhat.com>

* bus/connection.c (bus_connections_expect_reply): Make pending reply limit not common to all connections (Bug #5416) Patch from Kimmo Hämmäläinen <kimmo.hamalainen at nokia.com>

2006-02-10 John (J5) Palmieri <johnp@redhat.com>

* tools/dbus-launch.c: Fixed csh syntax output (Bug #5720)

2006-02-10 John (J5) Palmieri <johnp@redhat.com>

* gcj/Makefile.am: point to correct jar command (Bug #4529) patch from Doug Goldstein <cardoe at gentoo.org>

2006-02-09 Joe Shaw <joeshaw@novell.com>

* mono/Arguments.cs: Fix a magic number in the mono bindings that doesn't work on 64 bit arches. Patch from Peter Johanson.

2006-01-27 Robert McQueen <robot101@debian.org>

* glib/dbus-binding-tool-glib.[ch]: Patch based on Ricardo Kekki's patch to use an annotation org.freedesktop.DBus.GLib.ClientCSymbol when generating the client-side methods, instead of overloading CSymbol which broke everything horribly. My apologies.

2006-01-27 Robert McQueen <robot101@debian.org>

* glib/dbus-gtype-specialized.[ch], glib/dbus-gvalue-utils.c: Patch by me and Rob Taylor to add a simple_free function to D-Bus map and collection types, which allows those types which can be freed with a GDestroyNotify (such as GHashTables and GArrays, but not GPtrArrays) to be stored as the values in hashtables.

* test/glib/test-dbus-glib.c, test/glib/test-service-glib.{c,xml}:
Patch by Rob Taylor to add nested dicts to the glib tests to check
the above code works, and appears not to leak when called repeatedly.

2006-01-27 Robert McQueen <robot101@debian.org>

* glib/dbus-gvalue.c (demarshal_valuearray): Patch from Rob Taylor
to free a D-Bus allocated string with dbus_free () instead of g_free ().

2006-01-27 Iain Holmes <iain@openedhand.com>

* glib/dbus-gproxy.c (dbus_g_proxy_dispose): Protect the dispose method from being called multiple times.

2006-01-19 Robert McQueen <robot101@debian.org>

* glib/dbus-binding-tool-glib.c: Patch from Rob Taylor <rob.taylor@collabora.co.uk> to add support for generating bindings
to arrays that are represented as GPtrArrays rather than GArrays (ie
size-variable things, such as strings, objects, structs, etc).

2006-01-05 Robert McQueen <robot101@debian.org>

* dbus/dbus-glib.h, glib/dbus-gproxy.c: Patch from Ricardo Kekki <ricardo.kekki@movial.fi> to make it possible to inherit from DBusGProxy, by splitting the DBusGProxy struct into a public part
and a private part, and moving the setting of the DBusGProxyManager into a
connection property, allowing proper GObject construction.

2006-01-05 Robert McQueen <robot101@debian.org>

* glib/dbus-binding-tool-glib.c: Patch from Ricardo Kekki <ricardo.kekki@movial.fi> to make dbus-binding-tool heed C symbol
name annotations when generating glib client bindings.

2005-12-19 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-shared.h: Call it shared constants instead of shared macros

* dbus/dbus-protocol.h: add DOxygen markup to quiet warnings

2005-12-19 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-shared.h: add DOxygen markup to quiet warnings

2005-12-19 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-macros.h: correct DOxygen end of section (s/}@/{@})

2005-12-19 Ross Burton <ross@openedhand.com>

* doc/dbus-tutorial.xml:

Document the Glib client-side bindings, and list all possible annotations.

2005-12-19 John (J5) Palmieri <johnp@redhat.com>

* dbus/bus.c (dbus_bus_release_name): Add documentation

2005-12-06 Robert McQueen <robot101@debian.org>

* python/service.py: s/sucessful/successful/ so we're allocating to and reading from the same variable. Oops.

2005-11-30 John (J5) Palmieri <johnp@redhat.com>

* Released 0.60

2005-11-30 John (J5) Palmieri <johnp@redhat.com>

* test/qt/Makefile.am: build from srcdir

* qt/qtconnection.cpp (requestName): Changed PROHIBIT_REPLACE to ALLOW_REPLACE

Note - this code is wrong and needs to be fixed by the Qt binding developers. The flags should be treated as bitfields and not enums.

* qt/qtconnection.h: Change ProhibitReplace to AllowReplace

2005-11-30 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-list.c (_dbus_list_insert_after_link, _dbus_list_insert_after, link_after): remove #ifdef DBUS_BUILD_TESTS since we use these methods in production code

2005-11-30 John (J5) Palmieri <johnp@redhat.com>

* dbus/dbus-connection.c (dbus_connection_read_write): Add new

method for getting messages off the bus in the absence of a mainloop. This method is much like `dbus_connection_read_write_dispatch` except it does not dispatch the messages to a registered filter function. Instead it allows a developer to process messages by directly popping them off the bus.

2005-11-30 John (J5) Palmieri <johnp@redhat.com>

- * `bus/desktop-file.c` (`parse_key_value`): Ignore locales allowing the parser to continue instead of returning error
- (`bus_desktop_file_load`): Do not free parser data when `parse_section_start` or `parse_key_value` fails because it was already freed by `parser_free` (patch from Carlos Garcia Campos <carlosgc at gnome.org>)

2005-11-30 John (J5) Palmieri <johnp@redhat.com>

- * `dbus/dbus-auth.c`, `dbus/dbus-connection.c`, `dbus/dbus-keyring.c`, `dbus/dbus-server-debug-pipe.c`, `glib/dbus-binding-tool-glib.c`, `glib/dbus-glib-tool.c`, `glib/dbus-gparser.c`, `glib/dbus-gproxy.c`, `test/test-segfault.c`, `test/test-utils.c`, `test/glib/test-dbus-glib.c`, `tools/dbus-cleanup-sockets.c`, `tools/dbus-launch.c`, `tools/dbus-tree-view.c`, `tools/dbus-viewer.c`: Various cleanup of dead code and compiler warnings (patch from Kjartan Maraas <kmaraas at gnome.org>)

2005-11-30 John (J5) Palmieri <johnp@redhat.com>

- * `glib/dbus-gmain.c` (`connection_setup_add_watch`): plugged a leak (patch from Carlos Garnacho Parro <carlosg at gnome.org>)

2005-11-27 Robert McQueen <robot101@debian.org>

- * `python/dbus_bindings.pyx`: Repair my previous commit which reverted part of the preceding one. Oops. Merge patch by Johan Hedberg <johan.hedberg@nokia.com> to fix marshalling of 16-bit integer values on big-endian platforms.

- * `test/python/test-client.py`: Add some 16-bit integers to the test values.

2005-11-27 Carlos Garcia Campos <carlosgc@gnome.org>

- * `glib/dbus-gobject.c`: Append a `GValue` instead of a basic type in method return message for property getters

2005-11-27 Robert McQueen <robot101@debian.org>

* python/dbus_bindings.pyx: Fix a bug where doing a strict append with type v of an instance of dbus.Variant(foo, type='x') caused it to be boxed twice before sending over the bus.

* python/dbus_bindings.pyx, python/service.py, test/python/test-client.py: Update the constants for the new request_name flags, and update comments/test cases now that queueing is the default action.

2005-11-22 John (J5) Palmieri <johnp@redhat.com>

* configure.in:
- Change version to 0.60 for impending release
- upped the sonames because of ABI and API breakage

2005-11-22 John (J5) Palmieri <johnp@redhat.com>

* configure.in: Add test/name-test/Makefile to the generated Makefile list

* dbus/dbus-shared.h (#define DBUS_NAME_FLAG_ALLOW_REPLACEMENT): New flag which replaces DBUS_NAME_FLAG_PROHIBIT_REPLACEMENT (#define DBUS_NAME_FLAG_DO_NOT_QUEUE): New flag for specifying not to queue an owner if it can't be the primary owner

* bus/bus.h: Add new internal BusOwner struct

* bus/driver.c (bus_driver_handle_hello): Send flags (0 for default) to bus_registry_ensure and don't set the prohibit_replacement flag since they are now set per BusOwner and not per name. (bus_driver_handle_list_queued_owners): bus method (ListQueuedOwners) that returns the list of connections in a name's connection queue

* bus/services.c (struct BusService): remove prohibit_replacement field (struct BusOwner): new struct for keeping track of queued connections and their associated flags for the queue (struct BusRegistry): add a BusOwner memory pool (bus_registry_new): initialize the BusOwner memory pool (bus_registry_unref): free the BusOwner memory pool (_bus_service_find_owner_link): new internal method for searching the queue for a specific connection (bus_owner_set_flags): new method for adding setting the flags on a bus owner (bus_owner_new): new method that creates a BusOwner object from the

pool and sets its flags
(bus_owner_ref, bus_owner_unref): ref counting for BusOwner
objects
(bus_registry_ensure): Add the flags parameter
(bus_registry_acquire_service): Switch from using raw connections
to
using the BusOwner struct
Add new state machine for dealing with the new set of flags
(bus_registry_set_service_context_table, struct
OwnershipCancelData,
cancel_ownership, free_ownership_cancel_data,
add_cancel_ownership_to_transaction, struct OwnershipRestoreData,
restore_ownership, free_ownership_restore_data,
add_restore_ownership_to_transaction): Switch to using BusOwner
instead of raw connections
(bus_service_add_owner): Add flags parameter
Switch to using BusOwner instead of raw connections
Add state machine for dealing with the new set of flags
(bus_service_swap_owner): Swaps the first and second owners in
the
queue. Used to make sure proper signals are sent when a service
looses
or gains primary ownership. We never insert an owner at the top
of the
queue. Instead we insert it in the second position and then
swap.
(bus_service_remove_owner): Remove the owner from the queue
sending
out the NameLost and NameOwnerChanged signals if the we were the
primary owner
(bus_service_get_primary_owners_connection): New method that
extracts
the connection from the primary owner
(bus_service_get_primary_owner): Returns the BusOwner instead of
the
connection
(bus_service_get_allow_replacement): Changed from the old
bus_service_get_prohibit_replacement method. Checks the flags of
the
primary owner and returns if it can be replaced or not
(bus_service_set_prohibit_replacement): removed
(bus_service_has_owner): returns TRUE if and owner with
the specified connection exists in the queue

* dbus/dbus-bus.c (dbus_bus_connection_get_unique_name): New
helper
method that only compiles if tests are enabled. Allows us to get
the
unique name of a connection so we can check it against the queue
when
doing regression tests

* bus/activation.c (bus_activation_send_pending_auto_activate),
bus/dispatch.c (bus_dispatch),
bus/driver.c (bus_driver_handle_get_service_owner,
bus_driver_handle_get_connection_unix_user,
bus_driver_handle_get_connection_unix_process_id,
bus_driver_handle_get_connection_selinux_security_context),
bus/signals.c (connection_is_primary_owner):
use bus_service_get_primary_owners_connection instead of
bus_service_get_primary_owner

* dbus/dbus-sysdeps.c (_dbus_connect_unix_socket,
_dbus_listen_unix_socket): Calculate the length of the socket
path and use that instead of using a fixed length which was
causing socket names to contain many trailing Nul bytes.

* dbus/dbus-glib-lowlevel.h, glib/dbus-gobject.c
(dbus_g_method_get_sender): New method for extracting the sender
from a DBusGMethodInvocation
(dbus_g_method_return_get_reply): changed name to
dbus_g_method_get_reply
(dbus_g_method_return_send_reply): changed name to
dbus_g_method_send_reply

* doc/dbus-specification.xml: New docs that describe how the new
queueing system works and talks about the changes to the how
we specify socket names

* glib/examples/example-service.c,
glib/examples/example-signal-emitter.c,
glib/examples/statemachine/statemachine-server.c:
Changed the RequestName flags to the new system

* test/name-test/ (test-names.c, run-test.sh, Makefile.am): New
regression test suite for testing various states of the new
queueing system

2005-11-15 Robert McQueen <robot101@debian.org>

* dbus/dbus-glib-lowlevel.h, glib/dbus-gobject.c: Patch from Rob
Taylor to add two methods, dbus_g_method_return_get_reply and
dbus_g_method_return_send_reply, to allow you to get the reply
message from a DBusGMethodInvocation, append arbitrary stuff to
it,

and send it. The GLib bindings can't marshal a return value of
something like a(s) if the array is empty - ultimately they
should be
made to heed the signature of the out arguments as the Python
bindings
now can, but this is a workable interim solution which might have
other applications.

2005-11-15 Robert McQueen <robot101@debian.org>

* bus/driver.c, bus/services.c, bus/services.h: Add a ReleaseName method to org.freedesktop.DBus to release a bus name or give up waiting in the queue for it.

* dbus/dbus-bus.c, dbus/dbus-bus.h, dbus/dbus-shared.h: Add a dbus_bus_release_name method to send the ReleaseName method calls.

Add constants for the return values to dbus/dbus-shared.h.

* doc/dbus-specification.xml: Document the new ReleaseName method in the specification.

* python/dbus_bindings.pyx: Add a low-level python binding for the release name method.

* python/exceptions.py, python/service.py: Make freeing BusName objects release the name. Add a NameExistsException, and fix a bug with creating UnknownMethodException.

* test/python/test-client.py: Add tests for freeing BusName objects causing names to be released.

2005-11-14 Robert McQueen <robot101@debian.org>

* python/service.py: Include the traceback in the error reply when we send an exception over the bus. BEST_PATCH_EVER

2005-11-14 David Zeuthen <davidz@redhat.com>

Patch from Timo Hoenig <thoenig@suse.de>.

* bus/bus.c: I've recently investigated why the automatic reload of configuration files does not work as expected.

Currently, reloading configuration files does only work when running dbus-daemon with --nodaemon. If we are running as daemon we're hitting a dnotify bug once we fork the process.

We're initializing the dnotify fds before calling fork(). Once the child process forked it does still have the fds (and they still show up in /proc/`pidof dbus-daemon`/fd/) but we're not getting SIGIO as changes are made to the configuration files.

The attached patch moves the initialization of the dnotify fds to process_config_postinit(). This is safe for all current code paths and solves the dnotify disfunction. If we're running dbus-daemon as daemon the fds for dnotify are now being initialized after fork() for the child process.

* configure.in: The current configure.in check for dnotify probes 'x\$target_os' for being 'xlinux-gnu'. I've changed the check to match for 'xlinux', too. Additionally I have adapted the configure option's style to match with the others.

2005-11-14 Robert McQueen <robot101@debian.org>

* python/decorators.py, python/service.py: Add a new argument to the dbus.service.method decorator called sender_keyword, which if set, specifies the name of an argument which will be provided the bus name of the method caller.

* test/python/test-client.py, test/python/test-service.py: Add a method and test to check the sender_keyword functionality.

2005-11-07 John (J5) Palmieri <johnp@redhat.com>

* bus/driver.c (bus_driver_handle_reload_config): Make sure we send an empty reply so blocking calls don't block forever (Patch from Sjoerd Simons <sjoerd at luon.net>)

* AUTHORS: Add Robert McQueen for his work on the Python Bindings and other parts of D-Bus

2005-11-07 Robert McQueen <robot101@debian.org>

* python/decorators.py: Change emit_signal function to use the signature annotation of the signal when marshalling the arguments from the service. Fix a bug where the code checking signature length against argument length referenced the wrong variable.

* python/introspect_parser.py: Avoid adding the type signature of signal arguments to any methods which occur after them in the introspection data (!) by making the parser a little more careful about its current state.

* python/service.py: Remove debug prints from last commit (again :D).

* test/python/test-client.py, test/python/test-service.py: Add test signals with signature decorators to test the strict marshalling code gives errors at the right time. Could do with checking the signals actually get emitted too, given that the test does nothing with

signals at the moment...

2005-11-07 Robert McQueen <robot101@debian.org>

* python/_dbus.py: Add WeakReferenceDictionary cache of dbus.Bus instances to stop madness of creating new instances representing the same bus connection all the time, rendering any tracking of match rules and bus names quite meaningless. Caught a bug where the private argument to SessionBus() and friends was being passed in as use_default_mainloop by mistake. Still some problems with multiple dbus_binding.Connection instances representing the same low-level connection (eg when you use both SessionBus() and StarterBus() in same process), but it's a lot better now than it was.

* python/dbus_bindings.pyx: Add constants with the return values for bus_request_name().

* python/service.py: Store bus name instances in a per-dbus.Bus cache and retrieve the same instances for the same name, so deletion can be done with refcounting. Also now throws some kind of error if you don't actually get the name you requested, unlike previously...

* test/python/test-client.py: Add tests for instance caching of buses and bus name objects.

2005-11-04 Robert McQueen <robot101@debian.org>

* python/dbus_bindings.pyx, test/python/test-client.py: Fix marshalling of boolean values. Add some booleans to the values in the test client.

* python/decorators.py, python/service.py: Add an 'async_callbacks' argument to the dbus.service.method decorator, which allows you to name arguments to take two callback functions for replying with return values or an exception.

* test/python/test-client.py, test/python/test-service.py: Add test case using asynchronous method reply functions, both return values and errors, and from within both the function itself and from a mainloop callback.

* python/decorators.py, python/service.py: Perform checking that the

number of method/signal arguments matches the number of types in the signature at class loading time, not when you first introspect the class.

* python/service.py: Remove debug print left by the last commit.

2005-11-03 Robert McQueen <robot101@debian.org>

* python/service.py: Heavy refactoring of method invocation, with hopefully no effect on functionality. Nuked `_dispatch_dbus_method_call` in favour of a new `_message_cb` that uses separate functions for looking up the method to call, marshalling the return values, and sending exceptions as errors, and is easier to follow as a consequence. Fixes some corner cases about returning things that don't match your declared `out_signature`, allows exceptions to define `_dbus_error_name` and have it be sent over the bus as the error name, and paves the way for cool stuff like heeding the message no reply flag, asynchronous method implementations, informing the method of the sender, and including backtraces in the error messages.

* test/python/test-client.py: Catch and print exceptions thrown in the async callback tests, rather than passing them to the low-level bindings to be ignored in a noisy and frustrating manner.

2005-11-03 Robert McQueen <robot101@debian.org>

* python/_dbus.py, python/proxies.py, python/service.py: Add `__repr__` functions to `dbus.Bus`, `dbus.service.BusName` and `dbus.service.Object`, tweak others to be consistent.

* test/python/test-client.py: Tweak output of `testInheritance`.

2005-10-29 Robert McQueen <robot101@debian.org>

* python/service.py: Major changes to allow multiple inheritance from classes that define D-Bus interfaces:

1. Create a new Interface class which is the parent class of `Object`, and make the `ObjectType` metaclass into `InterfaceType`.
2. Patch written with Rob Taylor to replace use of `method_vtable`

with code that walks the class's `__MRO__` (method resolution order) to behave like Python does when invoking methods and allow overriding as you'd expect. Code is quite tricky because we have to find two methods, the one to invoke which has the right name and isn't decorated with the /wrong/ interface, and the one to pick up the signatures from which is decorated with the right interface.

The same caveats apply as to normal multiple inheritance - this has undefined behaviour if you try and inherit from two classes that define a method with the same name but are decorated with different interfaces. You should decorate your overriding method with the interface you want.

3. Replace grungy introspection XML generation code in the metaclass with dictionaries that cope correctly with multiple inheritance and the overriding of methods. This also uses the signature decorations to provide correct introspection data, including the debut appearance of the types of your return values. :D

* test/python/test-client.py, test/python/test-service.py: Add a test case to try invoking an method that overrides one inherited from a D-Bus interface class.

2005-10-29 Robert McQueen <robot101@debian.org>

* python/dbus_bindings.pyx: Tweak 'raise AssertionError' to `assert()`.
Add checking for the end of struct character when marshalling a struct in `MessageIter.append_strict`.

* python/examples/example-service.py,
python/examples/gconf-proxy-service.py,
python/examples/gconf-proxy-service2.py: Update to use gobject mainloop directly rather than appearing to depend on gtk.

* python/test/test-client.py, python/test/test-server.py: Remove obsolete and broken test scripts for old bindings. We have up to date and working tests in test/python/.

2005-10-29 Robert McQueen <robot101@debian.org>

* python/decorators.py: Add optional arguments to the method and signal decorators to allow you to specify the signature of arguments

and return values. Preserve the doc strings of signal functions in the decorated version, for pydoc and friends.

* python/dbus_bindings.pyx, python/proxies.py: Replace the parse_signature_block function with an iterable dbus.Signature() type. Fix a bug in MessageIter.append_strict where you could append anything by claiming it was a string.

* python/service.py: Use the out_signature decoration on methods to marshal return values, meaning you no longer require dbus.Array() or dbus.Dictionary() to indicate the type when returning empty arrays or dictionaries. Fix a bug where exceptions which are defined in __main__ are not turned into error replies.

* test/python/test-client.py, test/python/test-service.py: Add test for correct marshalling of return values according to out_signature. Fix a bug in the async call test where the error_handler is missing a self argument.

2005-10-29 Robert McQueen <robot101@debian.org>

* glib/Makefile.am, glib/examples/Makefile.am, glib/examples/statemachine/Makefile.am: Merge patch from Ubuntu by Daniel Stone to replace explicit calls to libtool with \$(LIBTOOL).

* test/python/.cvsignore: Add run-with-tmp-session-bus.conf.

* tools/dbus-monitor.1, tools/dbus-monitor.c: Merge dbus-monitor patch from Ubuntu by Daniel Silverstone to allow specifying match rules on the command line.

2005-10-27 Ross Burton <ross@openedhand.com>

* dbus/dbus-marshal-header.c:
Remove dead code.

* glib/dbus-gobject.c:
Stop compiler warning.

2005-10-25 Ross Burton <ross@openedhand.com>

- * dbus/dbus-auth.c:
- * dbus/dbus-server-unix.c:
- * dbus/dbus-transport-unix.c:
- * glib/dbus-gmain.c:
- * glib/dbus-gobject.c:

Add some const keywords.

2005-10-25 Ross Burton <ross@openedhand.com>

- * doc/dbus-specification.xml:
Document the NoReply annotation.

- * glib/dbus-binding-tool-glib.h:
- * glib/dbus-binding-tool-glib.c:
Respect the NoReply annotation.

2005-10-24 Robert McQueen <robot101@debian.org>

- * python/dbus_bindings.pyx (String, MessageIter): make D-Bus strings derive from unicode instead of str, and encode/decode UTF-8 when marshalling/unmarshalling bus messages

- * python/introspect_parser.py: encode introspection data as UTF-8 before passing the buffer into libxml2

- * test/python/test-client.py: add unicode test strings

- * test/data/valid-service-files/.cvsignore,
test/python/.cvsignore:
ignore generated python test files

2005-10-17 John (J5) Palmieri <johnp@redhat.com>

- * glib/dbus-gvalue-utils.c (hash_free_from_gtype): handle gdouble and G_TYPE_VALUE_ARRAY (DBUS_TYPE_STRUCT) (gvalue_from_hash_value, hash_value_from_gvalue): handle gdouble

- * glib/dbus-gvalue.c (dbus_gvalue_to_signature): add missing DBUS_STRUCT_BEGIN_CHAR and DBUS_STRUCT_END_CHAR characters when constructing struct signatures

- * python/_dbus.py (Bus): handle private connections using the private keyword in the constructor. defaults to private=False (Bus::close): new method to close a connection to the bus

- * python/dbus_bindings.pyx (Connection::close): renamed method was previously called disconnect (bus_get): now supports getting a private connection

- * python/proxies.py (ProxyMethod::__call__): check if ignore_reply

keyword is set to True. if it is, execute the method without waiting
for a reply
(ProxyObject::_introspect_execute_queue): new method for executing
all the pending methods that were waiting for the introspect to finish. this is called when introspect either succeeds or fails
(ProxyObject::_introspect_error_handler): call queued methods

2005-10-14 John (J5) Palmieri <johnp@redhat.com>

* python/dbus_bindings.pyx (MessageIter::append_strict): check for
STRUCT_BEGIN not TYPE_STRUCT in indicate we are marshalling a struct

* python/service.py (Object::_message_cb): handle exceptions correctly
by sending them over the wire to the calling app. This makes sure
the client returns immediately instead of waiting the 15 seconds to
timeout.

* test/python/test-client.py
(TestDBusBindings::testBenchmarkIntrospect):
Add a test to benchmark how long it takes to introspect a service and
call a method which returns a large element (pretty fast)

* test/python/test-service.py (TestObject::GetComplexArray): new test
method which pushes a lot of data

2005-10-13 John (J5) Palmieri <johnp@redhat.com>

* python/service.py(ObjectType::_reflect_on_signal, _reflect_on_method):
reclaim memory outside of the loop and use del instead of just setting
the key to None

2005-10-13 John (J5) Palmieri <johnp@redhat.com>

* python/service.py (ObjectType::_reflect_on_signal): Always close
signal tag even when there are no arguments

2005-10-13 John (J5) Palmieri <johnp@redhat.com>

* configure.in: Set mono, mono-docs and Qt3 to default to no instead of auto when building. These bindings do not

have full time maintainers and will not be supported for the 1.0 release.

2005-10-12 John (J5) Palmieri <johnp@redhat.com>

patches from Michael Krivoruchko <misha at sun.com>:

- * dbus/dbus-connection.c
(_dbus_connection_queue_received_message_link,
_dbus_connection_message_sent,
_dbus_connection_send_preallocated_unlocked_no_update,
_dbus_connection_pop_message_link_unlocked): handle the case when
path
is NULL when calling _dbus_verbose
- * configure.in: check for functions getpeerucred and getpeereid
- * dbus/dbus-sysdeps.c (_dbus_read_credentials_unix_socket):
provides
support of auth EXTERNAL on Solaris 10+ (getpeerucred), FreeBSD
4.6+,
OpenBSD 3.0+ and FreeBSD 5.0+ as well as MacOSX 10.2+
(getpeereid).
Patch was only tested on Solaris 10 x86 so it might be issues
with other platforms (i.e. BSDs and MacOSX)

2005-10-05 John (J5) Palmieri <johnp@redhat.com>

- * glib/dbus-gvalue.c (marshal_variant): call _dbus_gvalue_marshal
instead of marshal basic so we can handle recursive types in a
variant
- * test/glib/test-dbus-glib.c: Add test for marshaling recursive
types
in variants
- * test/glib/test-service-glib.c, test-service-glib.xml
(my_object_echo_variant [EchoVariant],
my_object_process_variant_of_array_of_ints123
[ProcessVariantOfArrayOfInts123]):
Add two test methods
- * python/introspect_parser.py: New module for parsing introspect
data.
- * python/dbus_bindings.pyx:
(various places): when throwing errors fix to use errmsg
instead
of message local variable because Pyrex can get confused with
other
message variables (initial patch by Robert McQueen)

<robert.mcqueen at collabora.co.uk>
(MessageIter::parse_signature_block): new method for getting the
next
block in a signature.
(MessageIter::append_strict): new method for appending values
strictly
using the passed in signature instead of guessing at the type
(MessageIter::append_dict, append_struct, append_array): use
signatures to marshal children if the signature is available

* python/exceptions.py (IntrospectionParserException): new
exception

* python/proxies.py (ProxyMethod::__call__): Marshal args with
introspected signatures if available, else we fall back to the
old way of doing things.
(ProxyObject::__introspect_reply_handler): parse introspection
data

* python/service.py (ObjectType::__reflect_on_method): Properly
terminate <method> if there are no args in the reflection data

* test/python/test-client.py: add tests for talking with the GLib
test server. This gives us better coverage for introspection
since
python to python will always generate arguments as variants. It
also
allows us to test the robustness of the GLib bindings and
interlanguage
communications.

2005-10-03 John (J5) Palmieri <johnp@redhat.com>

* bus/driver.c (bus_driver_handle_introspect): Add signals
to the introspect data. (patch from Daniel P. Berrange
<dan at berrange.com>)

* bus/dispatch.c (check_existent_ping): Add testcase for Ping

* dbus/dbus-connection.c (_dbus_connection_peer_filter,
_dbus_connection_run_builtin_filters): Changed these to
be unlock_no_update functions and call
_dbus_connection_send_unlocked_no_update instead of
dbus_connection_send to avoid locking errors.

* doc/TODO: Removed the make Ping test TODO

2005-09-26 John (J5) Palmieri <johnp@redhat.com>

* dbus/Python.pyx: Fixed memory leaks when throwing errors.
We now copy the message from a DBusError and then free

the error object before throwing the error

* glib/dbus-glib-tool.c: removed extra comma at the end of the DBusBindingOutputMode enum which was causing a warning.
#include <time.h> so using time_t is explicitly defined

2005-09-26 John (J5) Palmieri <johnp@redhat.com>

* Integrate patches from Lennart Poettering <mzsqb@openpioneer.de>:
- dbus/dbus-bus.c
(internal_bus_get): new method that takes over the heavy lifting of dbus_bus_get and adds the ability to get a private connection to the bus
(dbus_bus_get): wrapper to internal_bus_get that provides the same interface as in previous versions
(dbus_bus_get_private): new method that is a wrapper to internal_bus_get to get a private connection to the bus
- dbus/dbus-bus.h
(dbus_bus_get_private): add as a public libdbus interface
- dbus-1.pc.in: output system_bus_default_address and sysconfdir variables so apps can use them when compiling

2005-09-23 Harald Fernengel <harry@kde.org>

* dbus/qt: New Qt bindings

2005-09-12 Waldo Bastian <bastian@kde.org>

* dbus/dbus-marshall-validate.c,
doc/dbus-specification.xml, test/Makefile.am,
test/test-names.c: allow hyphens in bus names.

2005-09-11 Mark McLoughlin <mark@skynet.ie>

* test/data/auth/fallback.auth-script: we don't retry the EXTERNAL method when we know it's going to fail anymore.

2005-09-11 Mark McLoughlin <mark@skynet.ie>

* dbus/dbus-connection-internal.h: rename (add|remove|toggle)_(watch|timeout) to unlocked()

* dbus/dbus-connection.c: ditto.

* dbus/dbus-timeout.c, dbus/dbus-transport-unix.c: Update some callers for the renaming.

2005-09-10 Mark McLoughlin <mark@skynet.ie>

- * dbus/dbus-auth.c: (record_mechanisms): don't retry the first auth mechanism because we know we're just going to get rejected again.
- * dbus/dbus-keyring.c: (_dbus_keyring_reload): Fix thinko ... and what a nasty little bugger to track down you were ...
- * dbus/dbus-connection.c:
 - (_dbus_connection_add_watch),
 - (_dbus_connection_remove_watch): add note about these needing the connection to be locked.
 - (_dbus_connection_get_dispatch_status_unlocked): set status to DATA_REMAINS when we queue the disconnected message.
- * bus/dispatch.c:
 - (bus_dispatch): fix warning.
 - (check_existent_service_no_auto_start): Expect ChildSignaled error too.
 - (check_existent_hello_from_self): fix another couple of warnings.

2005-09-08 Joe Shaw <joeshaw@novell.com>

Patches from James Willcox <snorp@snorp.net>

- * mono/Makefile.am: Add Int16.cs and UInt16.cs
- * mono/DBusType/Array.cs: Handle multidimensional arrays, and support array "out" parameters.
- * mono/DBusType/Int16.cs, mono/DBusType/UInt16.cs: New files, for 16-bit int support.

2005-09-06 John (J5) Palmieri <johnp@redhat.com>

- * Released 0.50
- * Patch from Steve Grubb:
 - bus/activation.c (bus_activation_service_reload_test): clean up some indentation
 - dbus/dbus-keyring.c (_dbus_keyring_reload): fix conditional
 - dbus/dbus-message-factory.c (generate_special): fix a couple of buffer overflows in the test suite. This is non critical because it can not be exploited and this code is only run when doing a make check.
- * Patch from Yaakov Selkowitz: Build fixes for Cygwin
 - configure.in: Don't check and link against kdec core, only qt headers

- dbus/Makefile.am: Add -no-undefined to libdbus_1_la_LDFLAGS
- gcj/org/freedesktop/dbus/Makefile.am:
add libdbus_gcj_1_la_LDFLAGS = -no-undefined
- glib/Makefile.am: Add -no-undefined to
libdbus_glib_1_la_LDFLAGS
and \$(DBUS_GLIB_LIBS) to dbus_binding_tool_LDADD
- qt/Makefile.am: Add -no-undefined to libdbus_qt_1_la_LDFLAGS
- tools/Makefile.am: Add platform extensions to binaries
(i.e. .exe on windows)

* configure.in:

- Make it so if no suitable version of python is found we only
disable building python instead of exiting the configure script
- Require version 2.4 of glib for glib bindings
- Up version to 0.50

* python/__init__.py: Sync version with libdbus to (0,50,0)

2005-09-05 Olivier Andrieu <oliv__a@users.sourceforge.net>

* dbus/dbus-object-tree.c (find_subtree_recurse):
a couple of optimizations (bug #710):

- do a binary search in the tree
- insert a new child at the right place directly, no need for
qsort anymore
- do the "double alloc" thing when allocating children

2005-08-31 John (J5) Palmieri <johnp@redhat.com>

* python/Makefile.am: Break on pyrex errors instead of ignoring
them

* python/dbus_bindings.pyx: Memory management foo
(global): remove hacky_user_data_references global list
(GIL_safe_cunregister_function_handler): userdata now stuffed
into
tuples. Unref user_data
(GIL_safe_cmessage_function_handler): userdata now stuffed into
tuples
(Connection::__del__): Remove and replace with __dealloc__ method
(Connection::add_filter): Stuff user_data into a tuple. Use
Py_INCREF
to keep tuple from being deallocated instead of the global var
hack
(Connection::register_object_path): Stuff user_data into a tuple.
Use Py_INCREF to keep tuple from being deallocated instead of the
global var hack
(Connection::register_fallback): Stuff user_data into a tuple.
Use Py_INCREF to keep tuple from being deallocated instead of the
global var hack
(GIL_safe_pending_call_notification): Don't unref the message
because it gets unreffed when going out of scope. Py_XDECREF

the user_data
(PendingCall::__del__): Remove and replace with __dealloc__
method
(PendingCall::set_notify): ref the pending call because we will
need it to stick around for when the notify callback gets called
(Message::__del__): Remove and replace with __dealloc__ method

- * python/dbus_glib_bindings.pyx (init_gthreads): Changed to
gthreads_init to match up with the dbus call
- * python/glib.py (init_threads): Changed to threads_init to match
up with gobject.threads_init(). init_threads is kept for
backwards
compat but will most likely be deprecated in the future
- * test/python/test-client.py:
 - revamp to use Python's unittest functionality
 - add async call tests
 - setup threads in glib and dbus so we make sure locks are
working

2005-08-30 John (J5) Palmieri <johnp@redhat.com>

- * python/dbus_bindings.pyx
(_pending_call_notification, cunregister_function_handler,
cmessage_function_handler): All callback functions have been
rearranged
to workaroud a bug in Pyrex when working with the GIL which is
Python's
global lock when dealing with threads. They have been split into
a wrapper function (which assumes the name of the old function)
and
a _GIL_safe_<function name> function which contains the
functionality
of the old function. This ensures that Pyrex does not write code
the lock is released.

2005-08-30 John (J5) Palmieri <johnp@redhat.com>

- * python/dbus_bindings.pyx (_pending_call_notification): Obtain
the
GIL global lock when calling back into Python

2005-08-29 John (J5) Palmieri <johnp@redhat.com>

- * Release 0.36.2
- * Add Havoc's patch that never got applied to HEAD (Bug #2436):
- * bus/policy.c (bus_policy_allow_user): change default "user is
allowed" to be "user has same uid as the bus itself"; any

allow/deny rules will override.

* bus/session.conf.in: don't allow all users, since now by default the user that ran the bus can connect.

2005-08-26 Colin Walters <walters@verbum.org>

* tools/dbus-print-message.c (print_message): Flush stdout after printing a message, so that redirecting to a file, then hitting Ctrl-C works.

2005-08-25 John (J5) Palmieri <johnp@redhat.com>

* python/dbus_bindings.pyx: Tracked down a major memleak and fixed it
(EmptyMessage): new class that subclasses Message. This is a workaround to a Pyrex bug that fails to call `__del__` when the Message object goes out of scope. For some reason subclassing Message fixes this bug
(Bus::send_with_reply_and_block): use EmptyMessage instead of Message
- s/Message(_create=0)/EmptyMessage everywhere else

* test/python/test-{server|client}.py: add the python/.libs directory to the lookup path so dbus_bindings and dbus_glib_bindings don't get picked up from the system

2005-08-25 Colin Walters <walters@verbum.org>

* glib/dbus-gproxy.c (dbus_g_proxy_call): Doc update, thanks to Ryan Lortie for the suggestion.

2005-08-24 John (J5) Palmieri <johnp@redhat.com>

* test/python: Add python regression test
* configure.in: Add test/python/Makefile
* test/Makefile.am: Add the python directory to SUBDIRS

2005-08-24 John (J5) Palmieri <johnp@redhat.com>

* Release 0.36.1
* python/_dbus.py:
(Interface::connect_to_signal): propagate keywords for match on args
(Bus::add_signal_receiver): Fix typos
s/dbus_inteface/dbus_interface

* python/proxies.py (ProxyObject::connect_to_signal):
propagate keywords for match on args

* Makefile.am: point everything to pyexecdir since python borks
on multilib

2005-08-23 John (J5) Palmieri <johnp@redhat.com>

* Release 0.36

2005-08-23 Colin Walters <walters@verbum.org>

* test/glib/Makefile.am: Don't multiply-define EXTRA_DIST.

2005-08-23 John (J5) Palmieri <johnp@redhat.com>

* python/dbus_glib_bindings.pyx: reorder imports and c
definitions
to fix some warnings. We now use dbus_bindings.DBusConnection
instead
of defining DBusConnection ourselves.

2005-08-18 John (J5) Palmieri <johnp@redhat.com>

* python/dbus.pth: New path file to fix up problems when
installing
c libraries to lib64 and python files to lib.

* python/Makefile.am: install dbus.pth in the correct spot

2005-08-17 John (J5) Palmieri <johnp@redhat.com>

* ChangeLog: clean up my last entry a bit

* doc/introspect.xsl: New stylesheet for converting introspection
data
into browser renderable xhtml. Contributed by Lennart Poettering.

* doc/introspect.dtd: Fixups in the introspect format from
Lennart
Poettering.

* doc/dbus-tutorial.xml:

- Add Colin Walter to the Authors section for authoring the GLib
section
- Add descriptions of the new signature and type functionality
in the Python complex type mapping section
- Add a sidenote on the new args matching functionality in
the Python bindings
- Fixed up some of the examples to use the GObject.MainLoop
instead of gtk.main

```
* python/_dbus.py:
(Bus::_create_args_dict): New. Converts a hash of arg matches
to a more useable format
(Bus::_add_signal_receiver): add a **keywords parameter for
catching
arg match parameters
(Bus::_remove_signal_receiver): add a **keywords parameter for
catching
arg match parameters

* python/matchrules.py:
(MatchTree::_exec_matches): Check for arg matches
(SignalMatchRule::_add_args_match): New method
(SignalMatchRule::_execute): Added args_list parameter as an
optimization
so we don't have to marshal the args more than once
(SignalMatchRule::_match_args_from_list): New method that checks
to see
if the rule's arg matches match an argument list. Only arguments
set in the rule are checked.
(SignalMatchRule::_match_args_from_rule): New method that checks
to see
if the rule's arg matches match another rule's. All args have to
match
in order for this method to return true. If either rule has more
args
then it is not a match.
(SignalMatchRule::_is_match): Add args match
(SignalMatchRule::_repr): Add args to the final output if they
exist
```

2005-08-17 Ross Burton <ross@burtonini.com>

```
* glib/dbus-gproxy.c:
(dbus_g_proxy_call_no_reply): unref the message once sent.
(dbus_g_proxy_call): protect against NULL proxy.
```

2005-08-16 John (J5) Palmieri <johnp@redhat.com>

```
* python/__init__.py: Version updated (0, 43, 0)

* python/dbus_bindings.pyx:
- Fixed type objects to have self passed into __init__
- Added the Variant type
- Add the ability to specify types or signatures for Array,
Variant
and Dictionary
(Connection::_send_with_reply_handlers): return a PendingCall
object
(_pending_call_notification): handle the case when an error is
returned
without an error message in the body
```

```

    (MessageIter::get_boolean): return True or False instead of an
integer
    (MessageIter::python_value_to_dbus_sig): add direct checking of
types
    and add checks for objects with embeded signatures or types
(Array,
    Variant and Dictionary)
    (MessageIter::append_byte): handle case when the value is a
dbus.Byte
    (MessageIter::append_dict): handle embeded types or signatures
    (MessageIter::append_array): handle embeded types or signatures
    (MessageIter::append_variant): new method

* python/proxies.py:
    (DeferredMethod): New. Dummy executable object used when queuing
calls
    blocking on introspection data
    (ProxyMethod::__call__): add the timeout keyword for specifying
longer
    or shorter timeouts for method calls
    (ProxyObject): Add first pass at an introspection state machine
    (ProxyObject::__init__): Add introspect keyword for turing off an
on
    introspection.
    (ProxyObject::_Introspect): Internal Introspect call that
bypasses
    the usual mechanisms for sending messages. This is to avoid a
deadlock
    where the Intospect call would be queued waiting for the
Introspect
    call to finish ;-)
    (ProxyObject::_introspect_reply_handler): New. This method is
called
    when introspection returns with no error
    (ProxyObject::_introspect_error_handler): New. This method is
called
    when introspection encounters an error
    (ProxyObject::__getattr__): Code to handle different
introspection
    states. Queue async calls or block blocking calls if we are
introspecting. Pass through as normal if we are not or are done
with
    introspecting.

* python/service.py: Import signal and method from decorators.py

* python/types.py: Add Variant type

```

2005-08-16 Colin Walters <walters@verbum.org>

```

* glib/dbus-gobject.c (dbus_set_g_error): Don't lose if the
DBusError message is NULL.

```

2005-08-09 Havoc Pennington <hp@redhat.com>

* dbus/dbus-errors.c: apply patch from Timo Teras to make a malloc'd copy of the name parameter

2005-08-09 Havoc Pennington <hp@redhat.com>

* dbus/dbus-message.c (dbus_message_set_reply_serial): print warning if the reply serial is set to 0

2005-08-04 Colin Walters <walters@verbum.org>

```
* glib/dbus-gvalue-utils.h
(_dbus_g_type_specialized_builtins_init)
  (dbus_g_type_is_fixed, dbus_g_type_fixed_get_size)
  (dbus_gvalue_set_from_pointer, dbus_g_hash_table_value_foreach)
  (dbus_g_hash_table_insert_values,
dbus_g_hash_table_insert_steal_values)
  (dbus_gtype_is_valid_hash_key, dbus_gtype_is_valid_hash_value)
  (dbus_g_hash_func_from_gtype, dbus_g_hash_free_from_gtype)
  (dbus_g_hash_equal_from_gtype, dbus_gvalue_stor,
dbus_gvalue_take):
* glib/dbus-gvalue.h (dbus_g_value_types_init)
  (dbus_gvalue_demarshal, dbus_gvalue_demarshal_variant)
  (dbus_gvalue_demarshal_message, dbus_gvalue_marshal):
```

Prefix name with _ to ensure they're not exported. All callers updated.

```
* glib/dbus-gvalue.c (typecode_to_gtype)
  (dbus_typecode_maps_to_basic, basic_typecode_to_gtype)
  (signature_iter_to_g_type_dict)
  (signature_iter_to_g_type_array)
  (dbus_gtype_from_signature_iter, dbus_gtype_from_signature)
  (dbus_gtypes_from_arg_signature):
Move to dbus-gsignature.c.
```

```
* glib/dbus-binding-tool-glib.c
(dbus_binding_tool_output_glib_server): Call
  dbus_g_type_specialized_builtins_init instead of
dbus_g_value_types_init.
  (dbus_binding_tool_output_glib_client): Ditto.
```

* glib/Makefile.am (DBUS_GLIB_INTERNALS): Add dbus-gsignature.c and dbus-gsignature.h

* test/glib/test-service-glib.c (my_object_rec_arrays): Delete unused variable.

2005-08-03 Colin Walters <walters@verbum.org>

* glib/dbus-gobject.c: Add tests on hardcoded object info; this should catch any incompatible changes accidentally made.

2005-08-03 Havoc Pennington <hp@redhat.com>

* dbus/dbus-sysdeps.c (_dbus_read_credentials_unix_socket): fix typo, from Julien Puydt

* bus/connection.c (bus_connection_disconnected): we were always doing a wait_for_memory due to a buggy loop, found by Timo Hoenig

2005-08-01 Colin Walters <walters@verbum.org>

Patch from Joe Markus Clarke:

* glib/dbus-gidl.c (property_info_unref, arg_info_unref): Fix use-after-free.

2005-08-01 Colin Walters <walters@verbum.org>

Patch from Joe Markus Clarke:

* tools/dbus-send.c (main):

Don't use C99 style initializers (bug #3933).

2005-08-01 Colin Walters <walters@verbum.org>

Patch from Joe Markus Clarke:

* glib/dbus-gvalue.c (dbus_g_value_types_init):
* glib/dbus-gvalue-utils.c
(dbus_g_type_specialized_builtins_init)
* glib/dbus-gobject.c (write_interface):

Don't use C99 style initializers (bug #3933).

2005-07-31 Havoc Pennington <hp@redhat.com>

* tools/dbus-viewer.c (load_child_nodes): fix invocation of dbus_g_proxy_call, fix from Piotr Zielinski bug #3920

2005-07-30 Havoc Pennington <hp@redhat.com>

* fix a bunch of Doxygen warnings and mistakes

2005-07-30 Havoc Pennington <hp@redhat.com>

* dbus/dbus-sysdeps.c (_dbus_string_parse_uint): remove #ifdef DBUS_BUILD_TESTS since it's now used in production code

2005-07-29 Havoc Pennington <hp@redhat.com>

* test/glib/test-profile.c (write_junk): initialize the junk buffer so valgrind doesn't have a breakdown

2005-07-29 Havoc Pennington <hp@redhat.com>

* bus/signals.c (bus_signals_test): add match_rule_equal() tests (match_rule_matches): remove unused arg (test_matching): add tests for match_rule_matches()

* bus/signals.c (bus_match_rule_parse_arg_match): add ability to do arg0='foo' arg5='bar' in the match rules (match_rule_matches): don't match if the arg0='foo' doesn't match.

* dbus/dbus-protocol.h (DBUS_MAXIMUM_MATCH_RULE_ARG_NUMBER): add this

2005-07-29 Ross Burton <ross@openedhand.com>

* dbus/dbus-connection.c:
Don't create a DBusCondVar which is never used.

2005-07-27 Ross Burton <ross@openedhand.com>

* dbus/dbus-message.c:
Reduce the size of the maximum cached message to 10K.

2005-07-25 Ross Burton <ross@openedhand.com>

* glib/dbus-gproxy.c:
Remove matches when all proxies are unregistered.

2005-07-24 Colin Walters <walters@verbum.org>

* glib/dbus-gvalue.c (signature_iter_to_g_type_array): Don't require typedata; recursive arrays won't have it.

* test/glib/test-dbus-glib.c:
* test/glib/test-service-glib.c:
* test/glib/test-service-glib.xml: Add recursive arrays tests.

2005-07-20 John (J5) Palmieir <johnp@redhat.com>

* python/_dbus.py, _util.py, decorators.py, extract.py, matchrules.py, proxies.py, service.py: Cleanup of code after running it through the pyflakes code checker mostly dealing with undefined names. (Bug #3828, Patch from Anthony Baxter <anthony@interlink.com.au>)

2005-07-17 John (J5) Palmieri <johnp@redhat.com>

* NEWS: Update to 0.35.2

2005-07-17 John (J5) Palmieri <johnp@redhat.com>

* python/_dbus.py: Remove import of the dbus.services module as it no longer exists (patch from Dimitur Kirov)

* python/service.py (Object::__init__): Fixed typo s/name/bus_name (patch from Dimitur Kirov)

* python/examples/example-signal-emitter.py: import dbus.glib to get the main loop and use glib mainloop instead of gtk so X doesn't have to be running.

* python/examples/example-signal-recipient.py: import dbus.glib to get the main loop and use glib mainloop instead of gtk so X doesn't have to be running. Import the decorators module directly.

* test/glib/Makefile.am: Added DIST_EXTRA files that distcheck didn't pick up on but are needed to build

* configure.in: upped version to 0.35.2

* bus/driver.c, bus/selinux.c, bus/selinux.h, dbus/dbus-protocol.h:

added Colin Walters' SELinux API rename patch from head s/unix security context/selinux security context/

2005-07-16 John (J5) Palmieri <johnp@redhat.com>

* python/Makefile.am: dbus_binding.pxd.in should be included in EXTRA_DIST not dbus_binding.pxd
fix up \$(srcdir) hopefully for the last time

* NEWS: Update to 0.35.1

2005-07-16 Colin Walters <walters@verbum.org>

* bus/driver.c
(bus_driver_handle_get_connection_selinux_security_context): Renamed from bus_driver_handle_get_connection_unix_security_context.

Update for

error usage.

(message_handlers): Update for renames.

* bus/selinux.c (bus_selinux_allows_send): Handle OOM on _dbus_string_init failure correctly.

(bus_selinux_append_context): Convert SID to context. Append it

as a byte array.
(bus_selinux_shutdown): Handle the case where
bus_selinux_full_init
hasn't been called.

* bus/selinux.h: Update prototype.

* dbus/dbus-protocol.h
(DBUS_ERROR_SELINUX_SECURITY_CONTEXT_UNKNOWN): Renamed
from DBUS_ERROR_UNIX_SECURITY_CONTEXT_UNKNOWN.

2005-07-15 Colin Walters <walters@verbum.org>

* doc/TODO: Add note about convenience wrappers.

2005-07-15 John (J5) Palmieri <johnp@redhat.com>

* NEWS: Update to 0.35

2005-07-15 John (J5) Palmieri <johnp@redhat.com>

* glib/Makefile.am: Add make-dbus-glib-error-switch.sh to
EXTRA_DIST
so distcheck doesn't fail

* glib/examples/Makefile.am: Add example-service.xml and
example-signal-emitter.xml to EXTRA_DIST so distcheck doesn't
fail

* glib/examples/statemachine/Makefile.am: Add statemachine.xml
and
statemachine-server.xml to EXTRA_DIST so distcheck doesn't fail

* python/Makefile.am: Prepend \$(srcdir)/ to source files so the
compiler looks in the right places during distcheck

2005-07-15 John (J5) Palmieri <johnp@redhat.com>

* glib/example/Makefile.am: Fix a typo which cause make distcheck
to fail

2005-07-15 John (J5) Palmieri <johnp@redhat.com>

* python/examples/example-service.py,
python/examples/example-signal-emitter.py: Fixed up examples
for API changes

2005-07-15 John (J5) Palmieri <johnp@redhat.com>

* python/__init__.py: Upped to version (0,42,0) because of
the API change

2005-07-15 John (J5) Palmieri <johnp@redhat.com>

- * ChangeLog: fix date in last entry
- * configure.in, bus/system.conf.in: add the ability to configure the system bus user at compiletime with the --with-dbus-user flag (patch from Kristof Vansant)

2005-07-15 John (J5) Palmieri <johnp@redhat.com>

- * bus/dispatch.c, test/test-service.c: Add testcase for sending messages to oneself (TODO item).
- * python/service.py (class Object): Swap ordering of bus_name and object_path parameters to better support inheritance.
- * doc/dbus-tutorial.xml: change Python docs to reflect change in parameter ordering and fix the inheritance section.
- * doc/TODO: remove sending message to oneself TODO item

2005-07-15 Ross Burton <ross@openedhand.com>

- * glib/dbus-gproxy.c:
Fix a leak when calling methods via the proxy.

2005-07-15 Colin Walters <walters@verbum.org>

- * bus/selinux.c (bus_selinux_append_context): Wrap in HAVE_SELINUX.

2005-07-14 John (J5) Palmieri <johnp@redhat.com>

- * python/_dbus.py (Bus::remove_signal_receiver):
don't add a callback to the match if none has been passed in
- * python/matchrules.py (SignalMatchTree::remove): if the rule being matched does not have a callback treat it as a wildcard fix matching logic
- * doc/dbus-tutorial.xml: Add Python tutorial

2005-07-14 Colin Walters <walters@verbum.org>

- * bus/driver.c
(bus_driver_handle_get_connection_unix_security_context): New function.
(message_handlers): Add.
- * bus/selinux.c (bus_selinux_append_context): New function; appends security context to message.

* bus/selinux.h: Prototype.

* dbus/dbus-protocol.h
(DBUS_ERROR_UNIX_SECURITY_CONTEXT_UNKNOWN): New.

2005-07-14 John (J5) Palmieri <johnp@redhat.com>

* bus/activation.c: clean up all tabs to be 8 spaces
(bus_activation_activate_service): make sure we clean up
if activation fails

* bus/dispatch.c: clean up all tabs to be 8 spaces
(check_shell_fail_service_auto_start): New function
tests to make sure we get fail properly when trying to auto start
a service
with a faulty command line
(check_shell_service_success_auto_start): New function tests to
make sure
auto started services get the arguments on the command line

* test/test-shell-service.c: Added service for testing auto-
starting with
command line arguments

* test/data/valid-service-files/debug-shell-echo-fail.service.in,
test/data/valid-service-files/debug-shell-echo-
success.service.in:
Added service files for testing auto-starting with command line
arguments

* */.cvsignore: added a bunch of generated files to various
.cvsignore files

2005-07-14 Rodrigo Moya <rodrigo@novell.com>

* dbus/dbus-shell.[ch]: copy/pasted code from GLib.

* dbus/Makefile.am: added new files to build.

* bus/activation.c (bus_activation_activate_service): support
activation commands with parameters.

* test/shell-test.c: added test program for the shell parsing
code.

2005-07-13 David Zeuthen <davidz@redhat.com>

* tools/dbus-send.c (append_arg, type_from_name): Also support 16
and
64 bit signed and unsigned parameters

2005-07-13 John (J5) Palmieri <johnp@redhat.com>

- * python/.cvsignore: remove dbus_bindings.pyx, add dbus_bindings.pxd

- * python/service.py (class Name): renamed BusName to make it clearer what the object is for (a name on the bus)

- * python/examples/example-service.py, python/examples/example-signal-emitter.py: change the Name object to BusName

2005-07-12 Colin Walters <walters@verbum.org>

Patch from Jim Gettys <Jim.Gettys@hp.com>.

- * tools/dbus-launch.c: Include sys/select.h.

2005-07-12 John (J5) Palmieri <johnp@redhat.com>

- * python/dbus_bindings.pyx.in: removed

- * python/dbus_bindings.pyx: Added.
 - Fixed some memleaks (patch from Sean Meiners <sean.meiners@linspireinc.com>)
 - Broke out the #include "dbus_h_wrapper.h" and put it in its own pxd file (Pyrex definition)
 - Broke out glib dependancies into its own pyx module

- * python/dbus_bindings.pdx: Added.
 - Defines C class Connection for exporting to other modules

- * python/dbus_glib_bindings.pyx: Added.
 - New module to handle lowlevel dbus-glib mainloop integration

- * python/glib.py: Added.
 - Registers the glib mainloop when you import this module

- * python/services.py: Removed (renamed to service.py)

- * python/service.py: Added.
 - (class Server): renamed Name

- * python/__init__.py: Bump ro version (0,41,0)
 - don't import the decorators or service module by default. These now reside in the dbus.service namespace

- * python/_dbus.py (Bus::__init__): Add code run the main loop setup function on creation

- * python/examples/example-service.py,

python/examples/example-signal-emitter.py: update examples

* python/examples/gconf-proxy-service.py,
python/examples/gconf-proxy-service2.py: TODO fix these up

* doc/TODO: Addition

- Added a Python Bindings 1.0 section

- added "Add match on args or match on details to match rules"

2005-07-12 Colin Walters <walters@verbum.org>

* glib/examples/statemachine/Makefile.am (statemachine-server-glue.h)

(statemachine-glue.h):

* glib/examples/Makefile.am (example-service-glue.h)

(example-signal-emitter-glue.h):

* glib/Makefile.am (dbus-glib-error-switch.h):

Add libtool --mode=execute so we use the built library instead of any installed one.

2005-07-11 Colin Walters <walters@verbum.org>

* glib/dbus-gvalue.c (struct _DBusGValue): Delete.

(dbus_g_value_types_init): Remove assertion.

(dbus_g_value_get_g_type, dbus_g_value_open)

(dbus_g_value_iterator_get_values, dbus_g_value_get_signature)

(dbus_g_value_copy, dbus_g_value_free): Delete unimplemented functions related to DBusGValue. Now we marshal/demarshal structures as GValueArray.

(dbus_gtype_from_signature_iter): Return G_TYPE_VALUE_ARRAY for structures.

(signature_iter_to_g_type_array): Don't call signature_iter_to_g_type_struct.

(signature_iter_to_g_type_struct): Delete.

(dbus_gvalue_to_signature): Delete.

(dbus_gvalue_to_signature): New function with same name as other one; we can convert structures to signatures.

(demarshal_valuearray): New function.

(get_type_demarshaller): Use it.

(demarshal_recurse): Delete.

(marshal_proxy): New function.

(marshal_map): Warn if we can't determine signature from type.

(marshal_collection_ptrarray): Ditto.

(marshal_collection_array): Ditto.

(get_type_marshaller): Use marshal_valuearray.

(marshal_recurse): Delete.

(_dbus_gvalue_test): Add some tests.

* dbus/dbus-glib.h (struct _DBusGValueIterator):

(dbus_g_value_get_g_type, DBUS_TYPE_G_VALUE)

(dbus_g_value_open, dbus_g_value_iterator_get_value)

(dbus_g_value_iterator_get_values, dbus_g_value_iterator_recurse)
(dbus_g_value_free): Remove prototypes.

* glib/dbus-binding-tool-glib.c
(dbus_g_type_get_lookup_function): Handle
G_TYPE_VALUE_ARRAY.

* glib/examples/example-service.c:
* glib/examples/example-client.c: Implement GetTuple.

* test/glib/test-dbus-glib.c:
* test/glib/test-service-glib.c:
* test/glib/test-service-glib.xml: Add structure tests.

2005-07-10 Colin Walters <walters@verbum.org>

* doc/TODO: Knock off some GLib items with this patch.

* glib/dbus-gvalue-utils.c (_dbus_gtype_can_signal_error)
(_dbus_gvalue_signals_error): New functions.

* glib/dbus-gvalue-utils.h: Prototype them.

* glib/dbus-gobject.c (arg_iterate): Update to handle return vals
and change to not output const/retval flags for input args. All
callers updated.
(invoke_object_method): Refactor to handle return values. Add
some more comments in various places. Remove debug g_print.

* glib/dbus-binding-tool-glib.h (DBUS_GLIB_ANNOTATION_RETURNVAL):
New.

* glib/dbus-binding-tool-glib.c (dbus_g_type_get_marshall_name):
Handle G_TYPE_NONE.
(compute_gsignature): New function; refactored from code from
compute_marshall and compute_marshall_name. Enhance to
handle return values and async ops more cleanly. Update for
async ops returning NONE instead of BOOLEAN.
(compute_marshall, compute_marshall_name): Call
compute_gsignature
and output appropriate string.
(generate_glue): Handle return value annotation. Also don't dump
constness flag for input arguments.

* glib/Makefile.am (DBUS_GLIB_INTERNALS): New variable; contains
files shared between installed library and utilities.
(libdbus_glib_1_la_SOURCES): Move some stuff into
DBUS_GLIB_INTERNALS.
(libdbus_gtool_la_SOURCES): Suck in DBUS_GLIB_INTERNALS so the
binding tool can access gtype utility functions.

* test/glib/test-service-glib.c:

- * test/glib/test-service-glib.xml:
- * test/glib/test-dbus-glib.c: Add some tests for return values.

2005-07-09 Colin Walters <walters@verbum.org>

- * glib/dbus-gparser.c (parse_annotation): Add annotations to argument if available, not method.
- * glib/dbus-gobject.c (arg_iterate): More verbose warnings. (invoke_object_method): First, remove some redundant GValues (object_value, error_value) in favor of working on array directly. Second, rework constness to be less buggy. Now we iterate directly over the argument metadata instead of parallel iterating over output signature and metadata.
- * glib/dbus-glib-tool.h: Add INVALID_ANNOTATION error.
- * glib/dbus-binding-tool-glib.c (generate_glue): Barf on const annotation on input args.

2005-07-09 Colin Walters <walters@verbum.org>

- * glib/dbus-binding-tool-glib.h (DBUS_GLIB_ANNOTATION_CONST): Define.
- * glib/dbus-binding-tool-glib.c (generate_glue): Handle Const annotation.
- * glib/dbus-gobject.c (arg_iterate): Update to parse constval too. (method_dir_signature_from_object_info): Handle arg_iterate change. (write_interface): Ditto. (lookup_object_info): Don't barf if format_version is > 0. (invoke_object_method): Handle arg constness.
- * glib/dbus-gidl.c (struct ArgInfo): Add annotations. (arg_info_new): Create. (arg_info_unref): Destroy. (arg_info_get_annotations, arg_info_get_annotation) (arg_info_add_annotation): New functions.
- * glib/dbus-gidl.h: Prototype them.
- * glib/dbus-gparser.c (parse_annotation): Allow annotations in args, disallow them in properties. (parse_annotation): Handle arg annotations.
- * test/glib/test-service-glib.xml:
- * test/glib/test-service-glib.c: Update to make some methods const.

2005-07-08 Colin Walters <walters@verbum.org>

- * test/glib/test-service-glib.xml:
- * test/glib/test-service-glib.c:
- * test/glib/test-dbus-glib.c: Test a{sv}.

- * glib/examples/statemachine/statemachine.c:
- * glib/examples/statemachine/statemachine-server.c:
- * glib/examples/statemachine/statemachine-client.c: Fix some bugs,
add progress bar, etc.

- * glib/dbus-gvalue.c (register_array, register_dict): Delete; not needed anymore due to generic array/map marshalling.
(dbus_g_value_types_init): Don't register basic arrays or the string/string hash.
(dbus_gtype_from_signature_iter): Don't try to recurse into variants.
(dbus_gtype_to_signature): Check collection/map before type metadata.
(demarshal_garray_basic): Renamed to demarshal_collection_array.
(demarshal_ghashtable): Renamed to demarshal_map; fix to use new generic map creation/append functions instead of hash table specifically.
(get_type_demarshaller): Handle maps.
(demarshal_collection): Dispatch on collection type to either demarshal_collection_ptrarray or demarshal_collection_array.
(get_type_marshaller): Handle maps.
(marshal_collection): Dispatch collection type to either marshal_collection_ptrarray or marshal_collection_array.
(_dbus_gvalue_test): New test.

- * glib/dbus-gvalue-utils.c (unset_and_free_g_value): New function.
(hash_free_from_gtype): Use it to free GValues.
(hashtable_append): New function.
(ptrarray_append): Fix prototype.
(slist_append): Ditto.
(_dbus_gvalue_utils_test): Extend tests.

- * glib/dbus-gtype-specialized.c
(dbus_g_type_specialized_init_append): Renamed from dbus_g_type_specialized_collection_init_append. Remove const from
value, since we steal it.
(dbus_g_type_specialized_map_append): New function.

- * glib/dbus-gtype-specialized.h: Update prototypes.
Add DBusGTypeSpecializedMapAppendFunc.

- * glib/dbus-gtest.c (dbus_glib_internal_do_not_use_run_tests):
Run

`_dbus_gvalue_test.`

* `glib/dbus-gtest.h`: Prototype it.

2005-07-08 Ross Burton <ross@openedhand.com>

* `dbus/dbus-glib.h`:
Add `DBysGAsyncData` for the async bindings.

* `glib/dbus-binding-tool-glib.c`:
Re-enable the async bindings.

* `test/glib/test-dbus-glib.c`:
Add a test for the generated async bindings.

2005-07-08 Colin Walters <walters@verbum.org>

* `doc/TODO`: Update GLib todo bits, also add a post-1.0 TODO for a connection concept.

2005-07-08 Colin Walters <walters@verbum.org>

* `tools/Makefile.am`: Kill of `print-introspect` in favor of using `dbus-send --print-reply=literal`.

* `test/glib/test-service-glib.xml`:
* `test/glib/test-service-glib.c` (`my_object_get_objs`): New test for "ao".

* `test/glib/test-dbus-glib.c` (`echo_received_cb`): Free echo data. (main): Test `GetObjs`.

* `glib/examples/statemachine/Makefile.am`:
* `glib/examples/statemachine/sm-marshal.list`:
* `glib/examples/statemachine/statemachine-client.c`:
* `glib/examples/statemachine/statemachine-server.c`:
* `glib/examples/statemachine/statemachine-server.xml`:
* `glib/examples/statemachine/statemachine.c`:
* `glib/examples/statemachine/statemachine.h`:
* `glib/examples/statemachine/statemachine.xml`:

New example.

* `glib/examples/example-service.c` (main): Move invocation of `dbus_g_object_type_install_info` earlier, to emphasize it should only be done once.

* `glib/examples/example-signal-emitter.c` (main): Ditto.

* `glib/examples/Makefile.am` (SUBDIRS): Include `statemachine`.

* `glib/dbus-gvalue.h` (`dbus_gtype_to_signature`)

```

(dbus_gvalue_marshal): Update prototypes.

* glib/dbus-gvalue.c: Update all marshalling functions to take
const GValue instead of GValue.
(signature_iter_to_g_type_array): Return a GPtrArray for nonfixed
types.
(dbus_gvalue_to_signature): Update for dbus_gtype_to_signature
change.
(dbus_gtype_to_signature): Handle generic collecitons and maps.
Return a newly-allocated string.
(demarshal_proxy, demarshal_object_path, demarshal_object)
(demarshal_strv, demarshal_ghashtable): Set error, don't assert
if
we get the wrong types from message.
(get_type_demarshaller): New function, extracted from
dbus_gvalue_demarshal.
(demarshal_collection): New function, demarshals generic
collection.
(dbus_gvalue_demarshal): Just invoke result of
get_type_demarshaller. Throw error if we don't have one.
(marshal_garray_basic): Abort on OOM.
(get_type_marshaller): New function, extracted from
dbus_gvalue_marshal.
(collection_marshal_iterator, marshal_collection): New functions;
implements generic marshalling for an iterable specialized
collection.
(dbus_gvalue_marshal): Just invoke result of get_type_marshaller.

* glib/dbus-gvalue-utils.c (gvalue_from_ptrarray_value): Handle
G_TYPE_STRING.
(ptrarray_value_from_gvalue): Ditto.
(ptrarray_append, ptrarray_free): New functions.
(slist_constructor, slist_iterator, slist_copy_elt, slist_copy)
(slist_append, slist_end_append, slist_free): New functions.
(dbus_g_type_specialized_builtins_init): Add append fuctions
for GPtrArray and GSList. Register GSList.
(test_specialized_hash, _dbus_gvalue_utils_test): New functions.

* glib/dbus-gtype-specialized.h
(DBusGTypeSpecializedAppendContext):
New.
(dbus_g_type_specialized_collection_init_append)
(dbus_g_type_specialized_collection_append)
(dbus_g_type_specialized_collection_end_append): Prototype.
(DBusGTypeSpecializedCollectionVtable): Add append_func and
end_append_func.

* glib/dbus-gtype-specialized.c
(dbus_g_type_specialized_collection_init_append)
(dbus_g_type_specialized_collection_append)
(dbus_g_type_specialized_collection_end_append): New functions.
(dbus_g_type_map_value_iterate): Take const GValue.

```

(dbus_g_type_collection_value_iterate): Ditto.
Run * glib/dbus-gtest.c (dbus_glib_internal_do_not_use_run_tests):
_dbus_gvalue_utils_test.

* glib/dbus-gtest.h: Prototype it.

* glib/dbus-gproxy.c (dbus_g_proxy_manager_filter): Avoid using uninitialized owner_list.
(dbus_g_proxy_begin_call_internal): Move return_if_fail to public API.

(dbus_g_proxy_end_call_internal): Update to use error set from dbus_gvalue_demarshal instead of setting it here.
(dbus_g_proxy_begin_call): Move return_if_fail here.

* glib/dbus-gobject.c (write_interface): Update for dbus_gtype_to_signature returning new string.

* configure.in: Add glib/examples/statemachine.

2005-07-08 Joe Shaw <joeshaw@novell.com>

* configure.in: Add a configure option, --with-console-auth-dir

* dbus/dbus-sysdeps-util.c (_dbus_user_at_console): Use the new setting. Patch from Kay Sievers.

2005-07-06 Colin Walters <walters@verbum.org>

* dbus/dbus-glib.h (DBusGPendingCall, DBusGPendingCallNotify) (DBUS_TYPE_G_PENDING_CALL, dbus_g_pending_call_get_g_type) (dbus_g_pending_call_ref, dbus_g_pending_call_unref): Delete. (dbus_g_pending_call_set_notify, dbus_g_pending_call_cancel): Delete in favor of dbus_g_proxy_begin_call and dbus_g_proxy_cancel_call.
user (DBusGProxyCall, DBusGProxyCallNotify): New.
(dbus_g_proxy_begin_call): Change prototype to take callback,

data, and destroy function. This replaces dbus_g_pending_call_set_notify.

(dbus_g_proxy_cancel_call): Prototype.

(DBusGAsyncData): Delete, shouldn't be needed anymore.

* glib/dbus-gproxy.c (struct _DBusGProxy): Add call_id_counter and pending_calls map.

(struct _DBusGProxyManager): Add bus_proxy member, which is an internal proxy for calls to the bus. Remove pending_nameowner_calls, now the internal proxy keeps track.

(dbus_g_proxy_manager_unref): Unref bus proxy, remove reference to

pending_nameowner_calls.
 (got_name_owner_cb): Update prototype, and use
 dbus_g_proxy_end_call.
 (got_name_owner_cb): Remove reference to pending_nameowner_calls.
 (dbus_g_proxy_manager_register): Delete directly libdbus code in
 favor of using internal proxy.
 (dbus_g_proxy_manager_unregister): Update to use
 dbus_g_proxy_cancel_call for any pending GetNameOwner call.
 (dbus_g_proxy_init): Initialize pending calls map.
 (dbus_g_proxy_constructor): New.
 (dbus_g_proxy_class_init): Add get/set property functions,
 constructor, and add NAME, PATH, and INTERFACE properties.
 (cancel_pending_call): New function.
 (dbus_g_proxy_dispose): Iterate over any outstanding calls and
 cancel them.
 (dbus_g_proxy_set_property, dbus_g_proxy_get_property): New.
 (GPendingNotifyClosure): New structure.
 (d_pending_call_notify, d_pending_call_free): Moved here from
 dbus-glib.c.
 (DBUS_G_VALUE_ARRAY_COLLECT_ALL): Moved around to satisfy
 function
 ordering.
 (manager_begin_bus_call): New internal function for talking to
 internal bus proxy.
 (dbus_g_proxy_new): Construct object using GObject properties.
 (dbus_g_proxy_begin_call_internal): Update to take user data,
 etc.
 Create closure of same, and insert call into map of pending
 calls.
 (dbus_g_proxy_end_call_internal): Take call id instead of pending
 call. Look up pending call in current set. Remove it when we've
 completed.
 (dbus_g_pending_call_end, dbus_g_proxy_end_call_internal):
 Delete.
 (dbus_g_proxy_begin_call): Change API to take callback, user
 data,
 and destroy function directly.
 (dbus_g_proxy_end_call): Update to take DBusGProxyCall.
 (dbus_g_proxy_call): Invoke with NULL callback.
 (dbus_g_proxy_cancel_call): New function, replaces
 dbus_g_pending_call_cancel.

 * glib/dbus-gparser.c (validate_signature): Fix call to
 dbus_set_g_error.

 * glib/dbus-gobject.c (dbus_g_object_type_dbus_metadata_quark):
 New quark for attaching metadata to GType.
 (info_hash): Delete.
 (lookup_object_info): Look up using quark.
 (dbus_g_object_type_install_info): Check that a type is classed,
 not that it's an object. Also just install type data using quark
 instead of using global hash.

- * glib/dbus-glib.c (dbus_g_pending_call_ref)
 (dbus_g_pending_call_unref, dbus_pending_call_get_g_type)
 (GPendingNotifyClosure): Delete.
 (d_pending_call_notify, d_pending_call_free): Move to dbus-
 gproxy.c.
 (dbus_g_pending_call_set_notify, dbus_g_pending_call_cancel):
 Delete.

- * glib/dbus-binding-tool-glib.c (generate_client_glue): Disable
 async
 client method generation until we can fix it...

- * tools/dbus-viewer.c (load_child_nodes): Use dbus_g_proxy_call.
 (load_from_service_thread_func): Ditto.

- * tools/dbus-names-model.c (struct NamesModel): Hold
 DBusGProxyCall.
 (have_names_notify): Update prototype, use
 dbus_g_proxy_cancel_call.
 (names_model_reload): Update for new dbus_g_proxy_begin_call API.

- * tools/dbus-monitor.c (filter_func): Update for print_message
 API change.

- * test/glib/test-dbus-glib.c: Add more tests for async
 invocations. Update many begin_call/end_call pairs to just use
 dbus_g_proxy_call.

- * tools/dbus-send.c (main): Add --print-reply=literal mode. This
 allows us to dump print-introspect.c.

- * tools/dbus-print-message.h (print_message): Add literal
 argument
 to print_message which is intended to allow printing arguments
 without
 metadata like "string=".

- * tools/dbus-print-message.c (print_iter): Add literal argument.
 (print_message): Allow printing string messages literally.

2005-07-05 Colin Walters <walters@verbum.org>

- * glib/dbus-gproxy.c (marshal_dbus_message_to_g_marshaller):
 Remove value refcount leak, original patch from Jorn Baayen
 <jorn@openedhand.com>. Also remove useless extra value in favor
 of prepending to value array directly.

2005-07-02 Colin Walters <walters@verbum.org>

- * glib/dbus-gmain.c (_dbus_gmain_test): Fix test.

2005-07-01 Colin Walters <walters@verbum.org>

Patch from Jonathan Matthew <jonathan@kaolin.hn.org>

- * glib/dbus-gvalue.c (basic_typecode_to_gtype): Fix return type.
- (dbus_g_value_types_init): Marshal G_TYPE_CHAR as DBUS_TYPE_BYTE, G_TYPE_LONG as DBUS_TYPE_INT32, G_TYPE_ULONG as DBUS_TYPE_UINT32, and G_TYPE_FLOAT as DBUS_TYPE_DOUBLE.

2005-06-30 Colin Walters <walters@verbum.org>

- * test/glib/test-dbus-glib.c:
- * test/glib/test-service-glib.c:
- * test/glib/test-service-glib.xml: Update tests for new error setting bits, also add async tests (patch from Ross Burton).

- * test/glib/Makefile.am (test_service_glib_LDADD): Add DBUS_GLIB_THREADS_LIBS.

- * glib/dbus-gproxy.c (get_name_owner) (dbus_g_pending_call_end_valist): Ditto.

- * glib/dbus-gobject.c (error_metadata): New mapping from GError domain (GQuark) to DBusGErrorInfo.
- (gerror_domaincode_to_dbus_error_name): Attempt to look up error quark in error_metadata. Take message interface as default error message interface.
- (gerror_to_dbus_error_message): Pass message interface.
- (dbus_set_g_error): Resurrected.
- (dbus_g_error_info_free): New function.
- (dbus_g_object_type_install_info): Use g_type_class_ref instead of _peek to actually create the object class if it hasn't been created yet.
- (dbus_g_error_domain_register): New function.

- * glib/dbus-gmain.c (dbus_g_bus_get): Switch to dbus_set_g_error.

- * glib/dbus-gparser.c (validate_signature): Ditto.

- * dbus/dbus-glib.h (dbus_g_error_set): Delete.
- (dbus_g_error_domain_register): Prototype.

- * glib/dbus-glib.c (dbus_g_error_set): Delete.
- Update tests.

2005-06-29 Colin Walters <walters@verbum.org>

- * dbus/dbus-glib.h: Delete DBUS_TYPE_G_PROXY_ARRAY. Add DBUS_TYPE_G_OBJECT_PATH.

- * glib/dbus-gvalue.c (dbus_g_value_types_init): Removemarshallers

for G_TYPE_OBJECT and DBUS_TYPE_G_PROXY_ARRAY (the latter should be handled more generically). Add DBUS_TYPE_G_OBJECT_PATH.
(dbus_g_object_path_get_g_type): New function.
(dbus_gtype_from_signature_iter): Map DBUS_TYPE_OBJECT_PATH to DBUS_TYPE_G_OBJECT_PATH by default.
(demarshal_proxy): Remove unused name variable.
(demarshal_object_path, marshal_object_path): New functions.
(demarshal_proxy_array, marshal_proxy_array): Delete.

* glib/dbus-binding-tool-glib.c (dbus_g_type_get_c_name): Map DBUS_TYPE_G_OBJECT_PATH to char *.
(dbus_g_type_get_lookup_function): Map builtin DBUS_TYPE_G_OBJECT_PATH.

* test/glib/test-dbus-glib.c
* test/glib/test-service-glib.c (my_object_objpath):
Adapt tests to new object path marshalling.

2005-06-29 John (J5) Palmieri <johnp@redhat.com>

* configure.in: force check for Python >= 2.4

2005-06-29 Colin Walters <walters@verbum.org>

Patch from Ross Burton <ross@openedhand.com>

* glib/dbus-gobject.c (invoke_object_method): Unset object value in all cases, not only in async case.

2005-06-29 Colin Walters <walters@verbum.org>

* glib/dbus-gproxy.c (struct DBusGProxy): Add new member name_call for keeping track of any outgoing GetNameOwner call. Also add for_owner and associated.
(struct DBusGProxyManager): Add owner_names, which is hash table that maps a base name to a list of names it owns (that we're interested in). Add pending_nameowner_calls which is a list of all outstanding GetNameOwner; avoids us having to iterate over every proxy. Add unassociated_proxies which keeps track of name proxies with no associated name owner.
(dbus_g_proxy_manager_unref): Destroy owner_names.
(struct DBusGProxyNameOwnerInfo): New struct for keeping track of name refcounts.
(find_name_in_info, name_owner_foreach)
(dbus_g_proxy_manager_lookup_name_owner, insert_nameinfo)
(dbus_g_proxy_manager_monitor_name_owner)
(dbus_g_proxy_manager_unmonitor_name_owner)
(unassociate_proxies, dbus_g_proxy_manager_replace_name_owner): New functions; they manipulate the owner_names mapping.
(got_name_owner_cb): New function.
(get_name_owner): New function, extracted from dbus_g_proxy_new_for_name_owner.

(dbus_g_proxy_manager_register): For now we need to keep track of all NameOwnerChanged. Also if the proxy is for a name, if we don't already know the name owner, queue a new GetNameOwner request and add it to our list of unassociated proxies.

Otherwise

inc the refcount.

(dbus_g_proxy_manager_unregister): If this proxy is for a name, cancel any pending GetNameOwner call, etc.

(dbus_g_proxy_manager_filter): Handle NameOwnerChanged. Also use the owner_names mapping to look up the current names for the signal source, and dispatch to any proxies for that name.

(dbus_g_proxy_new): Initialize new members.

(dbus_g_proxy_new_for_name): Delete unused proxy variable.

(dbus_g_proxy_new_for_name_owner): Use get_name_owner.

(dbus_g_pending_call_end_valist): New function, extracted from dbus_g_proxy_end_call_internal. Useful when we don't have a

proxy

but want to use the GLib infrastructure. Also note how many arguments in reply were over.

(dbus_g_pending_call_end): New function, just call dbus_g_pending_call_end_valist.

(dbus_g_proxy_end_call_internal): Just call dbus_g_pending_call_end_valist.

* glib/dbus-gobject.c (_dbus_gobject_lookup_marshall): Fix lookup of builtin marshaller for STRING_STRING_STRING.

* test/glib/test-dbus-glib.c:

* test/glib/test-service-glib.c:

* test/glib/test-service-glib.xml:

Extend tests to cover name proxies, destruction of owner proxies, etc.

* glib/examples/example-signal-recipient.c

(dbus_g_proxy_new_for_name_owner): Create a name proxy.

* tools/dbus-send.c (main): Print D-BUS error name in addition to message.

2005-06-28 John (J5) Palmieri <johnp@redhat.com>

* python/dbus_bindings.pyx.in (cunregister_function_handler, cmessage_function_handler): Patch from Anthony Baxter <anthony@interlink.com.au> fixes threading

problems

by using the Py_GILState_Ensure/Release to synchronize with the python runtime.

2005-06-28 Ray Strode <rstrode@redhat.com>

* dbus/dbus-spawn.c (_dbus_babysitter_unref): kill

babysitter helper process on last unref, bug #2813.

2005-06-27 Colin Walters <walters@verbum.org>

- * test/glib/test-dbus-glib.c:
- * test/glib/test-service-glib.c:
- * test/glib/test-service-glib.xml:

Test hash table signal emitting.

- * glib/dbus-gobject.c (`_dbus_gobject_lookup_marshallers`): Convert types to their fundamental basis types, since this is whatmarshallers operate on. Also add an entry for `VOID_BOXED`.
- (`dbus_g_object_register_marshallers_array`): Convert to fundamental.

2005-06-26 Havoc Pennington <hp@redhat.com>

- * doc/dbus-tutorial.xml: fix names of interface/service/path, fix from Don Park

2005-06-26 Colin Walters <walters@verbum.org>

- * glib/dbus-glib.c (`dbus_set_g_error`): Delete.
- (`dbus_g_error_set`): New public function from its ashes; used by both service-side method implementation and GLib bindingsinternals.
- (`dbus_g_error_has_name`, `dbus_g_error_get_name`): New function.
- (`_dbus_glib_test`): Add some tests.

- * test/glib/test-dbus-glib.c (main): Test `dbus_g_error_has_name`.

- * test/glib/test-service-glib.c (`my_object_throw_error`): Use `dbus_g_error_set`.

- * glib/dbus-gobject.c (`gerror_to_dbus_error_message`): Handle errors thrown by `dbus_g_error_set`.

- * glib/dbus-gmain.c (`dbus_g_bus_get`): Change to `dbus_g_error_set`.

- * glib/dbus-gparser.c (`validate_signature`): Ditto.

- * glib/dbus-gproxy.c (`dbus_g_proxy_new_for_name_owner`)
- (`dbus_g_proxy_end_call_internal`): Ditto.

- * glib/Makefile.am: Generate `dbus-glib-error-switch.h`, which converts `DBUS_ERROR_x` to `DBUS_GERROR_x`.
- (`libdbus_glib_1_la_SOURCES`, `BUILT_SOURCES`, `CLEANFILES`): Add it.

- * doc/TODO: Remove error TODO.

- * doc/dbus-tutorial.xml: Update with documentation about error handling.

* dbus/make-dbus-glib-error-enum.sh: Tighten up regexp to make sure we only change DBUS_ERROR to DBUS_GERROR, not all ERROR to GERROR. Also add DBUS_GERROR_REMOTE_EXCEPTION.

2005-06-22 Colin Walters <walters@verbum.org>

Patch from Ross Burton <ross@openedhand.com>

* glib/dbus-gobject.c (dbus_g_method_return): Free out_sig.

2005-06-20 Colin Walters <walters@verbum.org>

* configure.in: Add glib/examples.

* glib/Makefile.am: Add examples/

* glib/examples/.cvsignore

* glib/examples/Makefile.am

* glib/examples/example-client.c

* glib/examples/example-service.c

* glib/examples/example-service.xml

* glib/examples/example-signal-emitter.c

* glib/examples/example-signal-emitter.xml

* glib/examples/example-signal-recipient.c:

New files; GLib binding examples, ported from python/examples.

2005-06-20 Colin Walters <walters@verbum.org>

* dbus/dbus-glib.h:

* glib/dbus-gproxy.c: Rename dbus_g_proxy_invoke to dbus_g_proxy_call.

* glib/dbus-binding-tool-glib.c:

* doc/dbus-tutorial.xml:

* test/glib/test-dbus-glib.c: Update for rename.

2005-06-20 Colin Walters <walters@verbum.org>

Patch suggested by Ross Burton <ross@openedhand.com>

* glib/dbus-gobject.c (export_signals): Free signal name.

(g_value_init): Use G_VALUE_NOCOPY_CONTENTS to plug memory leak. Add a bit of documentation.

(dbus_g_method_return_error): Free context, and note we do so.

2005-06-18 Murray Cumming <murrayc@murrayc.com>

* dbus/dbus-glib.h:

* glib/dbus-gobject.c:

* glib/dbus-gproxy.c:
* glib/dbus-gvalue.c: Predeclare structs as
typedef struct _Something Something instead of
typedef struct Something Something, so we can
redeclare the prototypes. Other GNOME libraries
do this already.

2005-06-17 Colin Walters <walters@verbum.org>

* tools/dbus-names-model.c (have_names_notify): Fix call
to dbus_g_proxy_end_call.

2005-06-17 Colin Walters <walters@verbum.org>

* glib/dbus-gproxy.c (dbus_g_proxy_emit_remote_signal): Don't
spew warnings if we get malformed remote signals.

* glib/dbus-gobject.c (propsig_iterate): New function.
(lookup_object_info): New function, extracted from
lookup_object_and_method.
(introspect_properties, introspect_signals): Delete; these
are merged into write_interface.
(write_interface): Write out signals and properties here;
dump the org.gtk.object stuff and use the interface given
in the introspection data blob. Also fix up property XML.
(lookup_values): New function.
(introspect_interfaces): Gather a mapping from interface to a
list of its methods, signals, and properties, then write out
each interface.
(lookup_object_and_method): Use lookup_object_info.
(struct DBusGSignalClosure): Add interface.
(dbus_g_signal_closure_new): Add interface. Don't dup signame;
we can just use the constant data.
(dbus_g_signal_closure_finalize): Don't free signal name.
(signal_emitter_marshall): Use interface from signal closure.
(export_signals): Only export signals mentioned in introspection
blob.
(dbus_g_connection_register_g_object): Warn if we have no
introspection data for an object.
(funcsig_equal): Remove unused variable.
(dbus_g_object_register_marshall): Take varargs instead of
list.
(dbus_g_object_register_marshall_array): New function,
extracted from old dbus_g_object_register_marshall.

* glib/dbus-binding-tool-glib.c (struct DBusBindingToolCData):
Add
signals and property data.
(write_quoted_string): New function, extracted from
generate_glue.
(generate_glue): Write signals and properties to introspection
blob.

- * dbus/dbus-glib.h (struct DBusGObjectInfo): Include exported_signals and exported_properties.
- (dbus_g_object_register_marshall): Update prototype.
- (dbus_g_object_register_marshall_array): Prototype.

- * test/glib/test-dbus-glib.c: Extend testing to cover new signals.

- * test/glib/test-service-glib.c: Add new test signals and method to emit them.

- * test/glib/test-service-glib.xml: Add some test signals.

- * test/glib/Makefile.am (BUILT_SOURCES): Add my-object-marshal.c and my-object-marshal.h
- (test_service_glib_SOURCES, test_dbus_glib_SOURCES): Add my-object-marshal.c.
- (my-object-marshal.c, my-object-marshal.h): Implement.

- * test/glib/.cvsignore: Update.

- * doc/TODO: Remove two GLib TODO items fixed by this patch.

2005-06-16 Colin Walters <walters@verbum.org>

- * doc/TODO: Update for GLib bindings.

2005-06-16 Colin Walters <walters@verbum.org>

- * glib/dbus-binding-tool-glib.c:
- * glib/dbus-gobject.c:
- * glib/dbus-gproxy.c: Add Nokia copyright; Patch from Ross Burton, for his GLib bindings work.

2005-06-16 Colin Walters <walters@verbum.org>

- * glib/dbus-gobject.c (funcsig_hash, funcsig_equal): Use n_params to iterate instead of walking to G_TYPE_INVALID.

Patch based on a patch from Ryan Gammon.

2005-06-16 Colin Walters <walters@verbum.org>

- * bus/bus.c (bus_context_new): Set parser to NULL after we unref it (Patch from Chris Boscolo, #2174).

2005-06-16 Colin Walters <walters@verbum.org>

- * python/dbus_bindings.pyx.in: Import size_t, __int64_t, __uint64_t, and __signed.

* dbus/dbus-sysdeps.c <HAVE_CMSGCRED> (write_credentials_byte):
Define cmsg struct, output it.
(_dbus_read_credentials_unix_socket):
Use cmsg struct.

Patch from Joe Markus Clarke for FreeBSD support.
