```

\`configure' configures dbus-glib 0.100.2 to adapt to many kinds of systems.

Usage: \$0 [OPTION]... [VAR=VALUE]...

To assign environment variables (e.g., CC, CFLAGS...), specify them as VAR=VALUE. See below for descriptions of some of the useful variables.

Defaults for the options are specified in brackets.

Configuration:

-h, --help	display this help and exit
--help=short	display options specific to this package
--help=recursive	display the short help of all the included packages
-V, --version	display version information and exit
-q, --quiet, --silent	do not print '`checking ...' messages
--cache-file=FILE	cache test results in FILE [disabled]
-C, --config-cache	alias for '`--cache-file=config.cache'
-n, --no-create	do not create output files
--srcdir=DIR	find the sources in DIR [configure dir or `..']

Installation directories:

--prefix=PREFIX	install architecture-independent files in PREFIX	@<:@@S @ac_default_prefix@:>@
--exec-prefix=EPREFIX	install architecture-dependent files in EPREFIX	@<:@PREFIX@:>@

By default, '`make install' will install all the files in '`\$ac_default_prefix/bin', '`\$ac_default_prefix/lib' etc. You can specify an installation prefix other than '`\$ac_default_prefix' using '`--prefix', for instance '`--prefix=\$HOME'.

For better control, use the options below.

Fine tuning of the installation directories:

--bindir=DIR	user executables [EPREFIX/bin]
--sbindir=DIR	system admin executables [EPREFIX/sbin]
--libexecdir=DIR	program executables [EPREFIX/libexec]
--sysconfdir=DIR	read-only single-machine data [PREFIX/etc]
--sharedstatedir=DIR	modifiable architecture-independent data [PREFIX/com]
--localstatedir=DIR	modifiable single-machine data [PREFIX/var]
--libdir=DIR	object code libraries [EPREFIX/lib]
--includedir=DIR	C header files [PREFIX/include]
--oldincludedir=DIR	C header files for non-gcc [/usr/include]

```

--datarootdir=DIR          read-only arch.-independent data root
[PREFIX/share]
--datadir=DIR              read-only architecture-independent data
[DATAROOTDIR]
--infodir=DIR              info documentation [DATAROOTDIR/info]
--localedir=DIR           locale-dependent data [DATAROOTDIR/locale]
--mandir=DIR              man documentation [DATAROOTDIR/man]
--docdir=DIR              documentation root @<:@DATAROOTDIR/doc/dbus-
glib@:>@
--htmldir=DIR             html documentation [DOCDIR]
--dvidir=DIR              dvi documentation [DOCDIR]
--pdfdir=DIR              pdf documentation [DOCDIR]
--psdir=DIR               ps documentation [DOCDIR]
_ACEOF

```

```
cat <<\_ACEOF
```

Program names:

```

--program-prefix=PREFIX    prepend PREFIX to installed
program names
--program-suffix=SUFFIX    append SUFFIX to installed
program names
--program-transform-name=PROGRAM run sed PROGRAM on installed
program names

```

System types:

```

--build=BUILD              configure for building on BUILD [guessed]
--host=HOST                cross-compile to build programs to run on HOST
[BUILD]
_ACEOF
fi

```

```

if test -n "$ac_init_help"; then

Optional Features:

```

--disable-option-checking  ignore unrecognized --enable/--with
options
--disable-FEATURE          do not include FEATURE (same as --enable-
FEATURE=no)
--enable-FEATURE[=ARG]    include FEATURE [ARG=yes]
--enable-maintainer-mode  enable make rules and dependencies not
useful (and
                           sometimes confusing) to the casual installer
--enable-silent-rules      less verbose build output (undo: "make V=1")
--disable-silent-rules     verbose build output (undo: "make V=0")
--enable-dependency-tracking
                           do not reject slow dependency extractors

```

```

--disable-dependency-tracking
                                speeds up one-time build
--enable-tests                    enable unit test code
--enable-ansi                    enable -ansi -pedantic gcc flags
--enable-verbose-mode            support verbose debug mode
--enable-asserts                 include assertion checks
--enable-checks                  include sanity checks on public API
--enable-gcov                    compile with coverage profiling
instrumentation (gcc
                                only)
--enable-bash-completion         install bash completion scripts
--enable-shared@<:@=PKGS@:>@    build shared libraries
@<:@default=yes@:>@
--enable-static@<:@=PKGS@:>@    build static libraries
@<:@default=yes@:>@
--enable-fast-install@<:@=PKGS@:>@
                                optimize for fast installation
@<:@default=yes@:>@
--disable-libtool-lock          avoid locking (might break parallel builds)
--enable-gtk-doc                 use gtk-doc to build documentation
@<:@@<:@default=no@:>@@@:>@
--enable-gtk-doc-html           build documentation in html format
@<:@@<:@default=yes@:>@@@:>@
--enable-gtk-doc-pdf            build documentation in pdf format
@<:@@<:@default=no@:>@@@:>@

Optional Packages:
--with-PACKAGE[=ARG]            use PACKAGE [ARG=yes]
--without-PACKAGE               do not use PACKAGE (same as --with-
PACKAGE=no)
--with-test-socket-dir=dirname
                                Where to put sockets for make check
--with-introspect-xml=filename
                                Pass in a pregenerated dbus daemon
introspection xml
                                file (as generated by 'dbus-daemon --
introspect') to
                                use instead of querying the installed dbus
daemon
--with-dbus-binding-tool=filename
                                Use external dbus-binding-tool program
--with-pic@<:@=PKGS@:>@         try to use only PIC/non-PIC objects
@<:@default=use
                                both@:>@
--with-gnu-ld                   assume the C compiler uses GNU ld
@<:@default=no@:>@
--with-libtool-sysroot=DIR      Search for dependent libraries within DIR
                                (or the compiler's sysroot if not specified).
--with-html-dir=PATH           path to installed docs

```

Some influential environment variables:

```

CC          C compiler command
CFLAGS      C compiler flags
LDFLAGS     linker flags, e.g. -L<lib dir> if you have libraries in
a
            nonstandard directory <lib dir>
LIBS        libraries to pass to the linker, e.g. -l<library>
CPPFLAGS    (Objective) C/C++ preprocessor flags, e.g. -I<include
dir> if
            you have headers in a nonstandard directory <include
dir>
CPP         C preprocessor
PKG_CONFIG  path to pkg-config utility
PKG_CONFIG_PATH
            directories to add to pkg-config's search path
PKG_CONFIG_LIBDIR
            path overriding pkg-config's built-in search path
DBUS_CFLAGS C compiler flags for DBUS, overriding pkg-config
DBUS_LIBS   linker flags for DBUS, overriding pkg-config
DBUS_GLIB_CFLAGS
            C compiler flags for DBUS_GLIB, overriding pkg-config
DBUS_GLIB_LIBS
            linker flags for DBUS_GLIB, overriding pkg-config
DBUS_GLIB_THREADS_CFLAGS
            C compiler flags for DBUS_GLIB_THREADS, overriding pkg-
config
DBUS_GLIB_THREADS_LIBS
            linker flags for DBUS_GLIB_THREADS, overriding pkg-
config
GTKDOC_DEPS_CFLAGS
            C compiler flags for GTKDOC_DEPS, overriding pkg-config
GTKDOC_DEPS_LIBS
            linker flags for GTKDOC_DEPS, overriding pkg-config

```

Use these variables to override the choices made by `configure' or to help it to find libraries and programs with nonstandard names/locations.

Report bugs to

https://bugs.freedesktop.org/enter_bug.cgi?product=dbus&component=GLib.

#
# Report the --help message.
#
if test "$ac_init_help" = "long"; then

```

```
# Omit some internal or obsolete options to make the list less
imposing.
# This message is too long to be a string in the A/UX 3.1 sh.
cat <<_ACEOF
\`configure' configures dbus 1.6.8 to adapt to many kinds of systems.
```

Usage: \$0 [OPTION]... [VAR=VALUE]...

To assign environment variables (e.g., CC, CFLAGS...), specify them as VAR=VALUE. See below for descriptions of some of the useful variables.

Defaults for the options are specified in brackets.

Configuration:

```
-h, --help                display this help and exit
  --help=short            display options specific to this package
  --help=recursive       display the short help of all the included
packages
-V, --version             display version information and exit
-q, --quiet, --silent    do not print ``checking ...' messages
  --cache-file=FILE      cache test results in FILE [disabled]
-C, --config-cache       alias for ``--cache-file=config.cache'
-n, --no-create           do not create output files
  --srcdir=DIR           find the sources in DIR [configure dir or
\`..']
```

Installation directories:

```
--prefix=PREFIX          install architecture-independent files in
PREFIX
                          @<:@@S|@ac_default_prefix@:>@
--exec-prefix=EPREFIX    install architecture-dependent files in
EPREFIX
                          @<:@PREFIX@:>@
```

By default, ``make install' will install all the files in ``\$ac_default_prefix/bin', ``\$ac_default_prefix/lib' etc. You can specify an installation prefix other than ``\$ac_default_prefix' using ``--prefix', for instance ``--prefix=\$HOME'.

For better control, use the options below.

Fine tuning of the installation directories:

```
--bindir=DIR             user executables [EPREFIX/bin]
--sbindir=DIR            system admin executables [EPREFIX/sbin]
--libexecdir=DIR         program executables [EPREFIX/libexec]
--sysconfdir=DIR         read-only single-machine data [PREFIX/etc]
--sharedstatedir=DIR     modifiable architecture-independent data
[PREFIX/com]
--localstatedir=DIR     modifiable single-machine data [PREFIX/var]
```

```

--libdir=DIR          object code libraries [EPREFIX/lib]
--includedir=DIR     C header files [PREFIX/include]
--oldincludedir=DIR  C header files for non-gcc [/usr/include]
--datarootdir=DIR    read-only arch.-independent data root
[PREFIX/share]
--datadir=DIR        read-only architecture-independent data
[DATAROOTDIR]
--infodir=DIR        info documentation [DATAROOTDIR/info]
--localedir=DIR     locale-dependent data [DATAROOTDIR/locale]
--mandir=DIR        man documentation [DATAROOTDIR/man]
--docdir=DIR        documentation root
@<:@DATAROOTDIR/doc/dbus@:>@
--htmldir=DIR       html documentation [DOCDIR]
--dvidir=DIR        dvi documentation [DOCDIR]
--pdfdir=DIR        pdf documentation [DOCDIR]
--psdir=DIR         ps documentation [DOCDIR]
_ACEOF

```

```
cat <<\_ACEOF
```

Program names:

```

--program-prefix=PREFIX      prepend PREFIX to installed
program names
--program-suffix=SUFFIX      append SUFFIX to installed
program names
--program-transform-name=PROGRAM  run sed PROGRAM on installed
program names

```

X features:

```

--x-includes=DIR    X include files are in DIR
--x-libraries=DIR   X library files are in DIR

```

System types:

```

--build=BUILD      configure for building on BUILD [guessed]
--host=HOST        cross-compile to build programs to run on HOST
[BUILD]

```

```
_ACEOF
```

```
fi
```

```

if test -n "$ac_init_help"; then
  case $ac_init_help in
    short | recursive ) echo "Configuration of dbus 1.6.8:>";;
    esac
  cat <<\_ACEOF

```

Optional Features:

```

--disable-option-checking  ignore unrecognized --enable/--with
options
--disable-FEATURE          do not include FEATURE (same as --enable-
FEATURE=no)
--enable-FEATURE[=ARG]    include FEATURE [ARG=yes]
--disable-maintainer-mode

```

```

useful (and
    disable make rules and dependencies not
    sometimes confusing) to the casual installer
--enable-silent-rules    less verbose build output (undo: "make V=1")
--disable-silent-rules  verbose build output (undo: "make V=0")
--enable-dependency-tracking
                        do not reject slow dependency extractors
--disable-dependency-tracking
                        speeds up one-time build
--enable-shared@<:@=PKGS@:>@  build shared libraries
@<:@default=yes@:>@
--enable-static@<:@=PKGS@:>@  build static libraries
@<:@default=yes@:>@
--enable-fast-install@<:@=PKGS@:>@
                        optimize for fast installation
@<:@default=yes@:>@
--disable-libtool-lock  avoid locking (might break parallel builds)
--enable-compiler-coverage
                        Enable generation of coverage data
--disable-compiler-optimisations
                        Disable compiler optimisations
--enable-developer      set defaults to be appropriate for a D-Bus
developer
                        instead of a distribution/end-user
--enable-ansi           enable -ansi -pedantic gcc flags
--enable-verbose-mode   support verbose debug mode
--enable-asserts        include assertion checks
--enable-checks         include sanity checks on public API
--enable-xml-docs       build XML documentation (requires xmlto)
--enable-doxygen-docs   build DOXYGEN documentation (requires
Doxygen)
--enable-abstract-sockets
                        use abstract socket namespace (linux only)
--enable-selinux        build with SELinux support
--enable-libaudit       build audit daemon support for SELinux
--enable-dnotify        build with dnotify support (linux only)
--enable-inotify        build with inotify support (linux only)
--enable-kqueue         build with kqueue support
--enable-console-owner-file
                        enable console owner file
--enable-userdb-cache   build with userdb-cache support
--enable-launchd        build with launchd auto-launch support
--enable-systemd        build with systemd at_console support
--enable-embedded-tests enable unit test code in the library and
binaries
--enable-modular-tests  enable modular regression tests (requires
GLib)
--enable-tests          enable/disable all tests, overriding
                        embedded-tests/modular-tests
--enable-installed-tests
                        enable unit test code in the library and
binaries

```

```

--enable-epoll          use epoll(4) on Linux
--enable-x11-autolaunch build with X11 auto-launch support
--disable-Werror        compile without -Werror (normally enabled in
                        development builds)
--enable-stats          enable bus daemon usage statistics

Optional Packages:
--with-PACKAGE[=ARG]    use PACKAGE [ARG=yes]
--without-PACKAGE       do not use PACKAGE (same as --with-
PACKAGE=no)
--with-pic@<:@=PKGS@:>@    try to use only PIC/non-PIC objects
@<:@default=use
                        both@:>@
--with-gnu-ld           assume the C compiler uses GNU ld
@<:@default=no@:>@
--with-libtool-sysroot=DIR Search for dependent libraries within DIR
                        (or the compiler's sysroot if not specified).
--with-xml=libxml/expat XML library to use (libxml may be named
libxml2 on
                        some systems)
--with-init-scripts=redhat
                        Style of init scripts to install
--with-session-socket-dir=dirname
                        Where to put sockets for the per-login-
session
                        message bus
--with-test-socket-dir=dirname
                        Where to put sockets for make check
--with-system-pid-file=pidfile
                        PID file for systemwide daemon
--with-system-socket=filename
                        UNIX domain socket for systemwide daemon
--with-console-auth-dir=dirname
                        directory to check for console ownership
--with-console-owner-file=filename
                        file whose owner determines current console
owner
--with-launchd-agent-dir=dirname
                        directory to put the launchd agent (default:
                        /Library/LaunchAgents)
--with-dbus-user=<user> User for running the DBUS daemon
(messagebus)
--with-dbus-daemon-dir=dirname
                        Directory for installing the DBUS daemon
--with-dbus-session-bus-default-address=nonce-
tcp:/autolaunch:/tcp:host:port
                        Transport Type to be used (default: nonce-
tcp:)
--without-64-bit        If you have to use this option, please
report it as
                        a bug

```

```

--with-valgrind      Add instrumentation to help valgrind to
understand
                    our allocator
--with-x             use the X Window System
--with-systemdsystemunitdir=DIR
                    Directory for systemd service files
--with-dbus-test-dir=dirname
                    path where the tests tools are available

```

Some influential environment variables:

```

CC                  C compiler command
CFLAGS              C compiler flags
LDFLAGS             linker flags, e.g. -L<lib dir> if you have libraries in
a
                    nonstandard directory <lib dir>
LIBS                libraries to pass to the linker, e.g. -l<library>
CPPFLAGS            (Objective) C/C++ preprocessor flags, e.g. -I<include
dir> if
                    you have headers in a nonstandard directory <include
dir>
CXX                 C++ compiler command
CXXFLAGS            C++ compiler flags
CPP                 C preprocessor
CXXCPP              C++ preprocessor
PKG_CONFIG           path to pkg-config utility
GLIB_CFLAGS          C compiler flags for GLIB, overriding pkg-config
GLIB_LIBS            linker flags for GLIB, overriding pkg-config
DBUS_GLIB_CFLAGS     C compiler flags for DBUS_GLIB, overriding pkg-config
DBUS_GLIB_LIBS       linker flags for DBUS_GLIB, overriding pkg-config
PYTHON               the Python interpreter
LIBXML_CFLAGS        C compiler flags for LIBXML, overriding pkg-config
LIBXML_LIBS          linker flags for LIBXML, overriding pkg-config
SYSTEMD_CFLAGS       C compiler flags for SYSTEMD, overriding pkg-config
SYSTEMD_LIBS         linker flags for SYSTEMD, overriding pkg-config
VALGRIND_CFLAGS      C compiler flags for VALGRIND, overriding pkg-config
VALGRIND_LIBS        linker flags for VALGRIND, overriding pkg-config
MAN2HTML             Path to man2html (optional)

```

Use these variables to override the choices made by `configure' or to help it to find libraries and programs with nonstandard names/locations.

Report bugs to

<https://bugs.freedesktop.org/enter_bug.cgi?product=dbus>.

# We used to test for /lib/ld.so.1 and disable shared libraries on
# powerpc, because MkLinux only supported shared libraries with the
# GNU dynamic linker. Since this was broken with cross compilers,
# most powerpc-linux boxes support dynamic linking these days and
# people can always --disable-shared, the test was removed, and we
# assume the GNU/Linux dynamic linker is in use.

    cat <<_ACEOF
\`configure' configures dbus-glib 0.100.2 to adapt to many kinds of
systems.

Usage: $0 [OPTION]... [VAR=VALUE]...

```

To assign environment variables (e.g., CC, CFLAGS...), specify them as VAR=VALUE. See below for descriptions of some of the useful variables.

Defaults for the options are specified in brackets.

Configuration:

-h, --help	display this help and exit
--help=short	display options specific to this package
--help=recursive	display the short help of all the included packages
-V, --version	display version information and exit
-q, --quiet, --silent	do not print '\`checking ...' messages
--cache-file=FILE	cache test results in FILE [disabled]
-C, --config-cache	alias for '\`--cache-file=config.cache'
-n, --no-create	do not create output files
--srcdir=DIR	find the sources in DIR [configure dir or '\`..']

Installation directories:

--prefix=PREFIX	install architecture-independent files in PREFIX
	@<:@@S @ac_default_prefix@:>@
--exec-prefix=EPREFIX	install architecture-dependent files in EPREFIX
	@<:@PREFIX@:>@

By default, '\`make install' will install all the files in '\`\$ac_default_prefix/bin', '\`\$ac_default_prefix/lib' etc. You can specify an installation prefix other than '\`\$ac_default_prefix' using '\`--prefix', for instance '\`--prefix=\$HOME'.

For better control, use the options below.

Fine tuning of the installation directories:

--bindir=DIR	user executables [EPREFIX/bin]
--sbindir=DIR	system admin executables [EPREFIX/sbin]
--libexecdir=DIR	program executables [EPREFIX/libexec]
--sysconfdir=DIR	read-only single-machine data [PREFIX/etc]
--sharedstatedir=DIR	modifiable architecture-independent data [PREFIX/com]
--localstatedir=DIR	modifiable single-machine data [PREFIX/var]
--libdir=DIR	object code libraries [EPREFIX/lib]
--includedir=DIR	C header files [PREFIX/include]
--oldincludedir=DIR	C header files for non-gcc [/usr/include]
--datarootdir=DIR	read-only arch.-independent data root [PREFIX/share]
--datadir=DIR	read-only architecture-independent data [DATAROOTDIR]

```

--infodir=DIR          info documentation [DATAROOTDIR/info]
--localedir=DIR       locale-dependent data [DATAROOTDIR/locale]
--mandir=DIR          man documentation [DATAROOTDIR/man]
--docdir=DIR          documentation root @<:@DATAROOTDIR/doc/dbus-
glib@:>@
--htmldir=DIR         html documentation [DOCDIR]
--dvidir=DIR          dvi documentation [DOCDIR]
--pdfdir=DIR          pdf documentation [DOCDIR]
--psdir=DIR           ps documentation [DOCDIR]
_ACEOF

```

```
cat <<\_ACEOF
```

Program names:

```

--program-prefix=PREFIX      prepend PREFIX to installed
program names
--program-suffix=SUFFIX      append SUFFIX to installed
program names
--program-transform-name=PROGRAM  run sed PROGRAM on installed
program names

```

System types:

```

--build=BUILD      configure for building on BUILD [guessed]
--host=HOST        cross-compile to build programs to run on HOST
[BUILD]
_ACEOF

```

```
fi
```

```

--disable-option-checking  ignore unrecognized --enable/--with
options
--disable-FEATURE          do not include FEATURE (same as --enable-
FEATURE=no)
--enable-FEATURE[=ARG]    include FEATURE [ARG=yes]
--enable-maintainer-mode  enable make rules and dependencies not

```

useful (and

```

sometimes confusing) to the casual installer
--enable-silent-rules      less verbose build output (undo: "make V=1")
--disable-silent-rules    verbose build output (undo: "make V=0")
--enable-dependency-tracking
                           do not reject slow dependency extractors
--disable-dependency-tracking
                           speeds up one-time build
--enable-tests             enable unit test code
--enable-ansi              enable -ansi -pedantic gcc flags

```

```

--enable-verbose-mode    support verbose debug mode
--enable-asserts        include assertion checks
--enable-checks          include sanity checks on public API
--enable-gcov            compile with coverage profiling
instrumentation (gcc
                        only)
--enable-bash-completion
                        install bash completion scripts
--enable-shared@<:@=PKGS@:>@ build shared libraries
@<:@default=yes@:>@
--enable-static@<:@=PKGS@:>@ build static libraries
@<:@default=yes@:>@
--enable-fast-install@<:@=PKGS@:>@
                        optimize for fast installation
@<:@default=yes@:>@
--disable-libtool-lock  avoid locking (might break parallel builds)
--enable-gtk-doc         use gtk-doc to build documentation
@<:@@<:@default=no@:>@@@:>@
--enable-gtk-doc-html   build documentation in html format
@<:@@<:@default=yes@:>@@@:>@
--enable-gtk-doc-pdf    build documentation in pdf format
@<:@@<:@default=no@:>@@@:>@

```

Optional Packages:

```

--with-PACKAGE[=ARG]    use PACKAGE [ARG=yes]
--without-PACKAGE       do not use PACKAGE (same as --with-
PACKAGE=no)
--with-test-socket-dir=dirname
                        Where to put sockets for make check
--with-introspect-xml=filename
                        Pass in a pregenerated dbus daemon
introspection xml
                        file (as generated by 'dbus-daemon --
introspect') to
                        use instead of querying the installed dbus
daemon
--with-dbus-binding-tool=filename
                        Use external dbus-binding-tool program
--with-pic@<:@=PKGS@:>@ try to use only PIC/non-PIC objects
@<:@default=use
                        both@:>@
--with-gnu-ld           assume the C compiler uses GNU ld
@<:@default=no@:>@
--with-libtool-sysroot=DIR Search for dependent libraries within DIR
                        (or the compiler's sysroot if not specified).
--with-html-dir=PATH    path to installed docs

```

Some influential environment variables:

```

CC          C compiler command
CFLAGS      C compiler flags
LDFLAGS     linker flags, e.g. -L<lib dir> if you have libraries in

```

```

LIBS          nonstandard directory <lib dir>
CPPFLAGS      libraries to pass to the linker, e.g. -l<library>
               (Objective) C/C++ preprocessor flags, e.g. -I<include
dir> if
               you have headers in a nonstandard directory <include
dir>
CPP           C preprocessor
PKG_CONFIG    path to pkg-config utility
PKG_CONFIG_PATH
               directories to add to pkg-config's search path
PKG_CONFIG_LIBDIR
               path overriding pkg-config's built-in search path
DBUS_CFLAGS   C compiler flags for DBUS, overriding pkg-config
DBUS_LIBS     linker flags for DBUS, overriding pkg-config
DBUS_GLIB_CFLAGS
               C compiler flags for DBUS_GLIB, overriding pkg-config
DBUS_GLIB_LIBS
               linker flags for DBUS_GLIB, overriding pkg-config
DBUS_GLIB_THREADS_CFLAGS
               C compiler flags for DBUS_GLIB_THREADS, overriding pkg-
config
DBUS_GLIB_THREADS_LIBS
               linker flags for DBUS_GLIB_THREADS, overriding pkg-
config
GTKDOC_DEPS_CFLAGS
               C compiler flags for GTKDOC_DEPS, overriding pkg-config
GTKDOC_DEPS_LIBS
               linker flags for GTKDOC_DEPS, overriding pkg-config

```

Use these variables to override the choices made by `configure' or to help it to find libraries and programs with nonstandard names/locations.

Report bugs to

<https://bugs.freedesktop.org/enter_bug.cgi?product=dbus&component=GLib>.

# This message is too long to be a string in the A/UX 3.1 sh.
cat <<_ACEOF
\`configure' configures dbus 1.6.8 to adapt to many kinds of systems.
```

Usage: \$0 [OPTION]... [VAR=VALUE]...

To assign environment variables (e.g., CC, CFLAGS...), specify them as VAR=VALUE. See below for descriptions of some of the useful variables.

Defaults for the options are specified in brackets.

Configuration:

```
-h, --help                display this help and exit
      --help=short        display options specific to this package
      --help=recursive    display the short help of all the included
packages
-V, --version            display version information and exit
-q, --quiet, --silent    do not print ``checking ...' messages
      --cache-file=FILE  cache test results in FILE [disabled]
-C, --config-cache      alias for ``--cache-file=config.cache'
-n, --no-create          do not create output files
      --srcdir=DIR       find the sources in DIR [configure dir or
``..']
```

Installation directories:

```
--prefix=PREFIX          install architecture-independent files in
PREFIX
                          @<:@@S|@ac_default_prefix@:>@
--exec-prefix=EPREFIX    install architecture-dependent files in
EPREFIX
                          @<:@PREFIX@:>@
```

By default, ``make install' will install all the files in
``\$ac_default_prefix/bin', ``\$ac_default_prefix/lib' etc. You can
specify
an installation prefix other than ``\$ac_default_prefix' using ``--
prefix',
for instance ``--prefix=\$HOME'.

For better control, use the options below.

Fine tuning of the installation directories:

```
--bindir=DIR             user executables [EPREFIX/bin]
--sbindir=DIR            system admin executables [EPREFIX/sbin]
--libexecdir=DIR        program executables [EPREFIX/libexec]
--sysconfdir=DIR        read-only single-machine data [PREFIX/etc]
--sharedstatedir=DIR    modifiable architecture-independent data
[PREFIX/com]
--localstatedir=DIR     modifiable single-machine data [PREFIX/var]
```

```

--libdir=DIR          object code libraries [EPREFIX/lib]
--includedir=DIR     C header files [PREFIX/include]
--oldincludedir=DIR  C header files for non-gcc [/usr/include]
--datarootdir=DIR    read-only arch.-independent data root
[PREFIX/share]
--datadir=DIR        read-only architecture-independent data
[DATAROOTDIR]
--infodir=DIR        info documentation [DATAROOTDIR/info]
--localedir=DIR      locale-dependent data [DATAROOTDIR/locale]
--mandir=DIR         man documentation [DATAROOTDIR/man]
--docdir=DIR         documentation root
@<:@DATAROOTDIR/doc/dbus@:>@
--htmldir=DIR        html documentation [DOCDIR]
--dvidir=DIR         dvi documentation [DOCDIR]
--pdfdir=DIR         pdf documentation [DOCDIR]
--psdir=DIR          ps documentation [DOCDIR]
_ACEOF

```

```
cat <<\_ACEOF
```

Program names:

```

--program-prefix=PREFIX      prepend PREFIX to installed
program names
--program-suffix=SUFFIX      append SUFFIX to installed
program names
--program-transform-name=PROGRAM  run sed PROGRAM on installed
program names

```

X features:

```

--x-includes=DIR    X include files are in DIR
--x-libraries=DIR   X library files are in DIR

```

System types:

```

--build=BUILD      configure for building on BUILD [guessed]
--host=HOST        cross-compile to build programs to run on HOST
[BUILD]

```

```
_ACEOF
```

```
fi
```

```

if test -n "$ac_init_help"; then
  case $ac_init_help in
    short | recursive ) echo "Configuration of dbus 1.6.8:>";;
    esac
  cat <<\_ACEOF

```

Optional Features:

```

--disable-option-checking  ignore unrecognized --enable/--with
options
--disable-FEATURE          do not include FEATURE (same as --enable-
FEATURE=no)
--enable-FEATURE[=ARG]    include FEATURE [ARG=yes]
--disable-maintainer-mode

```

```

useful (and
    disable make rules and dependencies not
    sometimes confusing) to the casual installer
--enable-silent-rules    less verbose build output (undo: "make V=1")
--disable-silent-rules  verbose build output (undo: "make V=0")
--enable-dependency-tracking
                        do not reject slow dependency extractors
--disable-dependency-tracking
                        speeds up one-time build
--enable-shared@<:@=PKGS@:>@  build shared libraries
@<:@default=yes@:>@
--enable-static@<:@=PKGS@:>@  build static libraries
@<:@default=yes@:>@
--enable-fast-install@<:@=PKGS@:>@
                        optimize for fast installation
@<:@default=yes@:>@
--disable-libtool-lock  avoid locking (might break parallel builds)
--enable-compiler-coverage
                        Enable generation of coverage data
--disable-compiler-optimisations
                        Disable compiler optimisations
--enable-developer      set defaults to be appropriate for a D-Bus
developer
                        instead of a distribution/end-user
--enable-ansi           enable -ansi -pedantic gcc flags
--enable-verbose-mode   support verbose debug mode
--enable-asserts        include assertion checks
--enable-checks         include sanity checks on public API
--enable-xml-docs       build XML documentation (requires xmlto)
--enable-doxygen-docs   build DOXYGEN documentation (requires
Doxygen)
--enable-abstract-sockets
                        use abstract socket namespace (linux only)
--enable-selinux        build with SELinux support
--enable-libaudit       build audit daemon support for SELinux
--enable-dnotify        build with dnotify support (linux only)
--enable-inotify        build with inotify support (linux only)
--enable-kqueue         build with kqueue support
--enable-console-owner-file
                        enable console owner file
--enable-userdb-cache   build with userdb-cache support
--enable-launchd        build with launchd auto-launch support
--enable-systemd        build with systemd at_console support
--enable-embedded-tests enable unit test code in the library and
binaries
--enable-modular-tests  enable modular regression tests (requires
GLib)
--enable-tests          enable/disable all tests, overriding
                        embedded-tests/modular-tests
--enable-installed-tests
                        enable unit test code in the library and
binaries

```

```

--enable-epoll          use epoll(4) on Linux
--enable-x11-autolaunch build with X11 auto-launch support
--disable-Werror        compile without -Werror (normally enabled in
                        development builds)
--enable-stats          enable bus daemon usage statistics

Optional Packages:
--with-PACKAGE[=ARG]    use PACKAGE [ARG=yes]
--without-PACKAGE       do not use PACKAGE (same as --with-
PACKAGE=no)
--with-pic@<:@=PKGS@:>@    try to use only PIC/non-PIC objects
@<:@default=use
                        both@:>@
--with-gnu-ld           assume the C compiler uses GNU ld
@<:@default=no@:>@
--with-libtool-sysroot=DIR Search for dependent libraries within DIR
                        (or the compiler's sysroot if not specified).
--with-xml=libxml/expat XML library to use (libxml may be named
libxml2 on
                        some systems)
--with-init-scripts=redhat
                        Style of init scripts to install
--with-session-socket-dir=dirname
                        Where to put sockets for the per-login-
session
                        message bus
--with-test-socket-dir=dirname
                        Where to put sockets for make check
--with-system-pid-file=pidfile
                        PID file for systemwide daemon
--with-system-socket=filename
                        UNIX domain socket for systemwide daemon
--with-console-auth-dir=dirname
                        directory to check for console ownership
--with-console-owner-file=filename
                        file whose owner determines current console
owner
--with-launchd-agent-dir=dirname
                        directory to put the launchd agent (default:
                        /Library/LaunchAgents)
--with-dbus-user=<user> User for running the DBUS daemon
(messagebus)
--with-dbus-daemon-dir=dirname
                        Directory for installing the DBUS daemon
--with-dbus-session-bus-default-address=nonce-
tcp:/autolaunch:/tcp:host:port
                        Transport Type to be used (default: nonce-
tcp:)
--without-64-bit        If you have to use this option, please
report it as
                        a bug

```

```

--with-valgrind      Add instrumentation to help valgrind to
understand
                    our allocator
--with-x             use the X Window System
--with-systemdsystemunitdir=DIR
                    Directory for systemd service files
--with-dbus-test-dir=dirname
                    path where the tests tools are available

```

Some influential environment variables:

```

CC                  C compiler command
CFLAGS              C compiler flags
LDFLAGS             linker flags, e.g. -L<lib dir> if you have libraries in
a
                    nonstandard directory <lib dir>
LIBS                libraries to pass to the linker, e.g. -l<library>
CPPFLAGS            (Objective) C/C++ preprocessor flags, e.g. -I<include
dir> if
                    you have headers in a nonstandard directory <include
dir>
CXX                 C++ compiler command
CXXFLAGS            C++ compiler flags
CPP                 C preprocessor
CXXCPP              C++ preprocessor
PKG_CONFIG           path to pkg-config utility
GLIB_CFLAGS         C compiler flags for GLIB, overriding pkg-config
GLIB_LIBS           linker flags for GLIB, overriding pkg-config
DBUS_GLIB_CFLAGS    C compiler flags for DBUS_GLIB, overriding pkg-config
DBUS_GLIB_LIBS      linker flags for DBUS_GLIB, overriding pkg-config
PYTHON              the Python interpreter
LIBXML_CFLAGS       C compiler flags for LIBXML, overriding pkg-config
LIBXML_LIBS         linker flags for LIBXML, overriding pkg-config
SYSTEMD_CFLAGS      C compiler flags for SYSTEMD, overriding pkg-config
SYSTEMD_LIBS        linker flags for SYSTEMD, overriding pkg-config
VALGRIND_CFLAGS     C compiler flags for VALGRIND, overriding pkg-config
VALGRIND_LIBS       linker flags for VALGRIND, overriding pkg-config
MAN2HTML            Path to man2html (optional)

```

Use these variables to override the choices made by `configure' or to help it to find libraries and programs with nonstandard names/locations.

Report bugs to

<https://bugs.freedesktop.org/enter_bug.cgi?product=dbus>.
