# Usage: $progname [OPTION]... [MODE-ARG]...
#
# Provide generalized library-building support services.
#
#       --config                show all configuration variables
#       --debug                enable verbose shell tracing
#  -n, --dry-run                display commands without modifying any
files
#       --features                display basic configuration information
and exit
#       --mode=MODE            use operation mode MODE
```

```

#      --preserve-dup-deps  don't remove duplicate dependency
libraries
#      --quiet, --silent    don't print informational messages
#      --no-quiet, --no-silent
#
#                          print informational messages (default)
#      --no-warn            don't display warning messages
#      --tag=TAG            use configuration variables from tag TAG
#  -v, --verbose            print more informational messages than
default
#      --no-verbose        don't print the extra informational
messages
#      --version            print version information
#  -h, --help, --help-all  print short, long, or detailed help
message
#
# MODE must be one of the following:
#
#      clean                remove files from the build directory
#      compile              compile a source file into a libtool
object
#      execute              automatically set library path, then run
a program
#      finish               complete the installation of libtool
libraries
#      install              install libraries or executables
#      link                 create a library or an executable
#      uninstall            remove libraries from an installed
directory
#
# MODE-ARGS vary depending on the MODE.  When passed as first option,
# `--mode=MODE' may be abbreviated as `MODE' or a unique abbreviation
of that.
# Try `$progname --help --mode=MODE' for a more detailed description
of MODE.
#
# When reporting a bug, please describe a test case to reproduce it
and
# include the following information:
#
#      host-triplet:        $host
#      shell:               $SHELL
#      compiler:            $LTCC
#      compiler flags:      $LTCCFLAGS
#      linker:              $LD (gnu? $with_gnu_ld)
#      $progname:           (GNU libtool) 2.4.2
#      automake:            $automake_version
#      autoconf:            $autoconf_version
#

#####

```

```

# $build to $host PATH CONVERSION FUNCTIONS #
#####
# invoked via `sto_host_path_cmd ARG'
#
# In each case, ARG is the path to be converted from $build to $host
format.
# The result will be available in $func_to_host_path_result.
#
# Path separators are also converted from $build format to $host
format. If
# ARG begins or ends with a path separator character, it is preserved
(but
# converted to $host format) on output.
#
# All path conversion functions are named using the following
convention:
#   file name conversion function      : func_convert_file_X_to_Y ()
#   path conversion function          : func_convert_path_X_to_Y ()
# where, for any given $build/$host combination the 'X_to_Y' value is
the
# same. If conversion functions are added for new $build/$host
combinations,
# the two new functions must follow this pattern, or
func_init_to_host_path_cmd
# will break.

# func_init_to_host_path_cmd
# Ensures that function "pointer" variable sto_host_path_cmd is set to
the
# appropriate value, based on the value of sto_host_file_cmd.

SOURCEFILE
```

Compile a source file into a libtool library object.

This mode accepts the following additional options:

```
    -o OUTPUT-FILE      set the output file name to OUTPUT-FILE
    -no-suppress        do not suppress compiler output for multiple
passes
    -prefer-pic         try to build PIC objects only
    -prefer-non-pic    try to build non-PIC objects only
    -shared             do not build a ``.o' file suitable for static
linking
    -static            only build a ``.o' file suitable for static
linking
    -Wc,FLAG           pass FLAG directly to the compiler
```

COMPILE-COMMAND is a command to be used in creating a ``standard' object file from the given SOURCEFILE.

The output file name is determined by removing the directory component from SOURCEFILE, then substituting the C source code suffix ``.c' with the library object suffix, ``.lo'."

```
    ; ;
```

```
    execute)
    $ECHO \
"Usage: $progname [OPTION]... --mode=execute COMMAND [ARGS]...
```

Automatically set library path, then run a program.

This mode accepts the following additional options:

```
    -dlopen FILE       add the directory containing FILE to the library
path
```

This mode sets the library path environment variable according to ``-dlopen' flags.

If any of the ARGS are libtool executable wrappers, then they are translated into their corresponding uninstalled binary, and any of their required library directories are added to the library path.

Then, COMMAND is executed, with ARGS as arguments."

Complete the installation of libtool libraries.

Each LIBDIR is a directory that contains libtool libraries.

The commands that this mode executes may require superuser privileges.

Use

the '--dry-run' option if you just want to see what would be executed."

;;

install)

\$ECHO \

"Usage: \$progname [OPTION]... --mode=install INSTALL-COMMAND...

Install executables or libraries.

INSTALL-COMMAND is the installation command. The first component should be

either the 'install' or 'cp' program.

The following components of INSTALL-COMMAND are treated specially:

-inst-prefix-dir PREFIX-DIR Use PREFIX-DIR as a staging area for installation

The rest of the components are interpreted as arguments to that command (only

BSD-compatible install options are recognized)."

;;

link)

\$ECHO \

"Usage: \$progname [OPTION]... --mode=link LINK-COMMAND...

Link object files or libraries together to form another library, or to create an executable program.

LINK-COMMAND is a command using the C compiler that you would use to create

a program from several object files.

The following components of LINK-COMMAND are treated specially:

-all-static do not do any dynamic linking at all
-avoid-version do not add a version suffix if possible

-bindir BINDIR specify path to binaries directory (for systems where libraries must be found in the PATH setting at runtime)

-dlopen FILE \'-dlpreopen' FILE if it cannot be dlopened at runtime

-dlpreopen FILE link in FILE and add its symbols to lt_preloaded_symbols

-export-dynamic allow symbols from OUTPUT-FILE to be resolved with dlsym(3)

-export-symbols SYMFILE try to export only the symbols listed in SYMFILE

-export-symbols-regex REGEX try to export only the symbols matching REGEX

-LLIBDIR search LIBDIR for required installed libraries

-lname OUTPUT-FILE requires the installed library libNAME

-module build a library that can dlopened

-no-fast-install disable the fast-install mode

-no-install link a not-installable executable

-no-undefined declare that a library does not refer to external symbols

-o OUTPUT-FILE create OUTPUT-FILE from the specified objects

-objectlist FILE Use a list of object files found in FILE to specify objects

-precious-files-regex REGEX don't remove output files matching REGEX

-release RELEASE specify package release information

-rpath LIBDIR the created library will eventually be installed in LIBDIR

-R[]LIBDIR add LIBDIR to the runtime path of programs and libraries

-shared only do dynamic linking of libtool libraries

-shrext SUFFIX override the standard shared library file extension

-static do not do any dynamic linking of uninstalled libtool libraries

-static-libtool-libs do not do any dynamic linking of libtool libraries

-version-info CURRENT[:REVISION[:AGE]] specify library version info [each variable defaults to 0]

-weak LIBNAME declare that the target provides the LIBNAME interface

-Wc,FLAG pass linker-specific FLAG directly to the compiler

-Xcompiler FLAG pass linker-specific FLAG directly to the compiler

-Wl,FLAG pass linker-specific FLAG directly to the linker

-Xlinker FLAG pass linker-specific FLAG directly to the linker

-XCc linker FLAG pass link-specific FLAG to the compiler driver (CC)

All other options (arguments beginning with \'-') are ignored.

Every other argument is treated as a filename. Files ending in ``.la'` are treated as uninstalled libtool libraries, other files are standard or library object files.

If the OUTPUT-FILE ends in ``.la'`, then a libtool library is created, only library objects (``.lo'` files) may be specified, and ``.rpath'` is required, except when creating a convenience library.

If OUTPUT-FILE ends in ``.a'` or ``.lib'`, then a standard library is created using ``.ar'` and ``.ranlib'`, or on Windows using ``.lib'`.

If OUTPUT-FILE ends in ``.lo'` or ``.${objext}'`, then a reloadable object file is created, otherwise an executable program is created."

```
;;

    uninstall)
    $ECHO \
"Usage: $progname [OPTION]... --mode=uninstall RM [RM-OPTION]...
FILE..."
```

Remove libraries from an installation directory.

RM is the name of the program to use to delete files associated with each FILE (typically ``.bin/rm'`). RM-OPTIONS are options (such as ``.f'`) to be passed to RM.

If FILE is a libtool library, all the files associated with it are deleted.

Otherwise, only FILE itself is deleted using RM."

Note that spawn() does not by itself call the command interpreter
(getenv ("COMSPEC") != NULL ? getenv ("COMSPEC") :
({ OSVERSIONINFO v; v.dwOSVersionInfoSize =
sizeof(OSVERSIONINFO);
    GetVersionEx(&v);
    v.dwPlatformId == VER_PLATFORM_WIN32_NT;
    }) ? "cmd.exe" : "command.com").
Instead it simply concatenates the arguments, separated by ' ', and
calls
CreateProcess(). We must quote the arguments since Win32
CreateProcess()
interprets characters like ' ', '\t', '\\', '"' (but not '<' and
'>') in a
special way:
- Space and tab are interpreted as delimiters. They are not treated
as
delimiters if they are surrounded by double quotes: "...".
- Unescaped double quotes are removed from the input. Their only
effect is
that within double quotes, space and tab are treated like normal
characters.
- Backslashes not followed by double quotes are not special.
- But 2*n+1 backslashes followed by a double quote become
n backslashes followed by a double quote (n >= 0):
\" -> "

# The TAGs below are defined such that we never get into a situation
# in which we disable both kinds of libraries.  Given conflicting
# choices, we go for a static library, that is the most portable,
# since we can't tell whether shared libraries were disabled because
# the user asked for that or because the platform doesn't support
# them.  This is particularly important on AIX, because we don't
# support having both static and shared libraries enabled at the same
# time on that platform, so we default to a shared-only configuration.
# If a disable-shared tag is given, we'll fallback to a static-only
# configuration.  But we'll never go from static-only to shared-only.

# Usage: $progname [OPTION]... [MODE-ARG]...
#
# Provide generalized library-building support services.
#
#       --config                show all configuration variables
#       --debug                enable verbose shell tracing
#  -n, --dry-run              display commands without modifying any
files
#       --features              display basic configuration information
and exit
#       --mode=MODE            use operation mode MODE
#       --preserve-dup-deps    don't remove duplicate dependency
libraries
```

```

#      --quiet, --silent      don't print informational messages
#      --no-quiet, --no-silent
#                                print informational messages (default)
#      --no-warn              don't display warning messages
#      --tag=TAG              use configuration variables from tag TAG
#      -v, --verbose          print more informational messages than
default
#      --no-verbose           don't print the extra informational
messages
#      --version              print version information
#      -h, --help, --help-all  print short, long, or detailed help
message
#
# MODE must be one of the following:
#
#      clean                  remove files from the build directory
#      compile                compile a source file into a libtool
object
#      execute                automatically set library path, then run
a program
#      finish                 complete the installation of libtool
libraries
#      install                install libraries or executables
#      link                   create a library or an executable
#      uninstall              remove libraries from an installed
directory
#
# MODE-ARGS vary depending on the MODE.  When passed as first option,
# `--mode=MODE' may be abbreviated as `MODE' or a unique abbreviation
of that.
# Try `$progname --help --mode=MODE' for a more detailed description
of MODE.
#
# When reporting a bug, please describe a test case to reproduce it
and

#####
# $build to $host PATH CONVERSION FUNCTIONS #
#####

```

```

# invoked via `sto_host_path_cmd ARG'
#
# In each case, ARG is the path to be converted from $build to $host
format.
# The result will be available in $func_to_host_path_result.
#
# Path separators are also converted from $build format to $host
format. If
# ARG begins or ends with a path separator character, it is preserved
(but
# converted to $host format) on output.
#
# All path conversion functions are named using the following
convention:
#   file name conversion function      : func_convert_file_X_to_Y ()
#   path conversion function           : func_convert_path_X_to_Y ()
# where, for any given $build/$host combination the 'X_to_Y' value is
the
# same. If conversion functions are added for new $build/$host
combinations,
# the two new functions must follow this pattern, or
func_init_to_host_path_cmd
# will break.

# func_init_to_host_path_cmd
# Ensures that function "pointer" variable $to_host_path_cmd is set to
the
# appropriate value, based on the value of $to_host_file_cmd.

    esac
}

```

```
    compile)
    $ECHO \
"Usage: $progname [OPTION]... --mode=compile COMPILE-COMMAND...
SOURCEFILE
```

Compile a source file into a libtool library object.

This mode accepts the following additional options:

```
    -o OUTPUT-FILE      set the output file name to OUTPUT-FILE
    -no-suppress        do not suppress compiler output for multiple
passes
    -prefer-pic         try to build PIC objects only
    -prefer-non-pic    try to build non-PIC objects only
    -shared             do not build a ``.o' file suitable for static
linking
    -static            only build a ``.o' file suitable for static
linking
    -Wc,FLAG           pass FLAG directly to the compiler
```

COMPILE-COMMAND is a command to be used in creating a 'standard' object file from the given SOURCEFILE.

The output file name is determined by removing the directory component from SOURCEFILE, then substituting the C source code suffix '.c' with the library object suffix, '.lo'."

;;

```
    execute)
    $ECHO \
"Usage: $progname [OPTION]... --mode=execute COMMAND [ARGS]...
```

Automatically set library path, then run a program.

This mode accepts the following additional options:

```
    -dlopen FILE       add the directory containing FILE to the library
path
```

This mode sets the library path environment variable according to '-dlopen' flags.

If any of the ARGS are libtool executable wrappers, then they are translated into their corresponding uninstalled binary, and any of their required library directories are added to the library path.

Then, COMMAND is executed, with ARGS as arguments."

;;

```
finish)
    $ECHO \
"Usage: $progname [OPTION]... --mode=finish [LIBDIR]...
```

Complete the installation of libtool libraries.

Each LIBDIR is a directory that contains libtool libraries.

The commands that this mode executes may require superuser privileges.

Use

the '--dry-run' option if you just want to see what would be executed."

;;

```
install)
    $ECHO \
"Usage: $progname [OPTION]... --mode=install INSTALL-COMMAND...
```

Install executables or libraries.

INSTALL-COMMAND is the installation command. The first component should be either the 'install' or 'cp' program.

The following components of INSTALL-COMMAND are treated specially:

-inst-prefix-dir PREFIX-DIR Use PREFIX-DIR as a staging area for installation

The rest of the components are interpreted as arguments to that command (only BSD-compatible install options are recognized)."

;;

```
link)
    $ECHO \
"Usage: $progname [OPTION]... --mode=link LINK-COMMAND...
```

Link object files or libraries together to form another library, or to create an executable program.

LINK-COMMAND is a command using the C compiler that you would use to create a program from several object files.

The following components of LINK-COMMAND are treated specially:

-all-static do not do any dynamic linking at all
-avoid-version do not add a version suffix if possible

-bindir BINDIR specify path to binaries directory (for systems where libraries must be found in the PATH setting at runtime)

-dlopen FILE \'-dlpreopen' FILE if it cannot be dlopened at runtime

-dlpreopen FILE link in FILE and add its symbols to lt_preloaded_symbols

-export-dynamic allow symbols from OUTPUT-FILE to be resolved with dlsym(3)

-export-symbols SYMFILE try to export only the symbols listed in SYMFILE

-export-symbols-regex REGEX try to export only the symbols matching REGEX

-LLIBDIR search LIBDIR for required installed libraries

-lname OUTPUT-FILE requires the installed library libNAME

-module build a library that can dlopened

-no-fast-install disable the fast-install mode

-no-install link a not-installable executable

-no-undefined declare that a library does not refer to external symbols

-o OUTPUT-FILE create OUTPUT-FILE from the specified objects

-objectlist FILE Use a list of object files found in FILE to specify objects

-precious-files-regex REGEX don't remove output files matching REGEX

-release RELEASE specify package release information

-rpath LIBDIR the created library will eventually be installed in LIBDIR

-R[]LIBDIR add LIBDIR to the runtime path of programs and libraries

-shared only do dynamic linking of libtool libraries

-shrext SUFFIX override the standard shared library file extension

-static do not do any dynamic linking of uninstalled libtool libraries

-static-libtool-libs do not do any dynamic linking of libtool libraries

-version-info CURRENT[:REVISION[:AGE]] specify library version info [each variable defaults to 0]

-weak LIBNAME declare that the target provides the LIBNAME interface

-Wc,FLAG pass linker-specific FLAG directly to the compiler

-Xcompiler FLAG pass linker-specific FLAG directly to the compiler

-Wl,FLAG pass linker-specific FLAG directly to the linker

-Xlinker FLAG pass linker-specific FLAG directly to the linker

-XCc linker FLAG pass link-specific FLAG to the compiler driver (CC)

All other options (arguments beginning with \'-') are ignored.

Every other argument is treated as a filename. Files ending in ``.la'` are treated as uninstalled libtool libraries, other files are standard or library object files.

If the OUTPUT-FILE ends in ``.la'`, then a libtool library is created, only library objects (``.lo'` files) may be specified, and ``.rpath'` is required, except when creating a convenience library.

If OUTPUT-FILE ends in ``.a'` or ``.lib'`, then a standard library is created using ``.ar'` and ``.ranlib'`, or on Windows using ``.lib'`.

If OUTPUT-FILE ends in ``.lo'` or ``.${objext}'`, then a reloadable object file is created, otherwise an executable program is created."

```
;;

    uninstall)
    $ECHO \
"Usage: $progname [OPTION]... --mode=uninstall RM [RM-OPTION]...
FILE..."
```

Remove libraries from an installation directory.

RM is the name of the program to use to delete files associated with each FILE (typically ``.bin/rm'`). RM-OPTIONS are options (such as ``.f'`) to be passed to RM.

If FILE is a libtool library, all the files associated with it are deleted.

Otherwise, only FILE itself is deleted using RM."

/* Prepares an argument vector before calling spawn().
Note that spawn() does not by itself call the command interpreter
(getenv ("COMSPEC") != NULL ? getenv ("COMSPEC") :
({ OSVERSIONINFO v; v.dwOSVersionInfoSize =
sizeof(OSVERSIONINFO);
    GetVersionEx(&v);
    v.dwPlatformId == VER_PLATFORM_WIN32_NT;
    }) ? "cmd.exe" : "command.com").
Instead it simply concatenates the arguments, separated by ' ', and
calls
CreateProcess(). We must quote the arguments since Win32
CreateProcess()
interprets characters like ' ', '\t', '\\', '"' (but not '<' and
'>') in a
special way:
- Space and tab are interpreted as delimiters. They are not treated
as
delimiters if they are surrounded by double quotes: "...".
- Unescaped double quotes are removed from the input. Their only
effect is
that within double quotes, space and tab are treated like normal
characters.
- Backslashes not followed by double quotes are not special.
- But 2*n+1 backslashes followed by a double quote become
n backslashes followed by a double quote (n >= 0):
\" -> "

# The TAGs below are defined such that we never get into a situation
# in which we disable both kinds of libraries.  Given conflicting
# choices, we go for a static library, that is the most portable,
# since we can't tell whether shared libraries were disabled because
# the user asked for that or because the platform doesn't support
# them.  This is particularly important on AIX, because we don't
# support having both static and shared libraries enabled at the same
# time on that platform, so we default to a shared-only configuration.
# If a disable-shared tag is given, we'll fallback to a static-only
# configuration.  But we'll never go from static-only to shared-only.

# ### BEGIN LIBTOOL TAG CONFIG: disable-shared
build_libtool_libs=no
build_old_libs=yes
# ### END LIBTOOL TAG CONFIG: disable-shared

# ### BEGIN LIBTOOL TAG CONFIG: disable-static
build_old_libs=`case $build_libtool_libs in yes) echo no;; *) echo
yes;; esac`
# ### END LIBTOOL TAG CONFIG: disable-static

Release summaries are done on the mailing list and linked through the wiki.

== END IMPORTANT NOTE ==

D-Bus GLib Bindings 0.78 (04 Dec 2008)

Thanks to Robert McQueen, Philip Van Hoof, David Zeuthen, Colin Walters, Dan Williams, Nick Welch, Tomas Pelka and others for their contributions.

Reliability fixes:

- #16114 [patch] wincaps-to-uscore property names for GetAll()
- #16419: recursive variants demarshaling limits
- #18573: service tracker race

Other notable fixes and enhancements:

- #17329: allow hash tables to contain complex types
- #17798: add support for 'o', 'g' and 'as' in dictionaries
- #16925: bash completion for dbus-send

D-Bus GLib Bindings 0.75 (05 Jun 2008)

==

Thanks to Dan Williams, David Zeuthen, Kimmo Härmäläinen, Ross Burton, William Jon McCann, Colin Walters, Brian Cameron, Peter O'Gorman, Peter Kjellerstedt, Christian Persch, Rob Taylor and others for their contributions in this release.

Critical fixes:

- #15430: ABI now guaranteed frozen
- #8607: Fix broken introspection XML
- #16079: Return an error on unknown property Get

- #10834: Fix error handling in `dbus_g_proxy_end_call_internal`

Other notable fixes:

- #11672: Fixes for `/bin/sh` as `dash`
- #11675: Fixes for non-gcc compilers
- #10668: Correctly detect path to `dbus-daemon`
- #12849, #12857: Memory leak fixes
- New function to specify default timeout for calls on proxy
- Implement `org.freedesktop.DBus.Properties.GetAll`
- Require `DBus 1.1`

D-Bus GLib Bindings 0.74 (27 Jun 2007)

==

- Init threading first to stop a warning from new GLib.
- Remove the XML documentation support in `configure`
- Fix typo in `_dbus_gvalue_signals_error` (#10837) (Thanks to Peter Kjellerstedt)
- Update GLib requirement (Closes #10889).
- Document `dbus-gtype-specialized`
- Add simple test suite for peer objects.
- Support peer-to-peer proxies. (Closes #10233).
- Add `dbus_connection_get_g_connection`.
- Stop compiler warnings (Closes #10374).
- Handle `dbus` errors which are not name has no owner
- Update abstract socket test from `DBus`, which now cross-compile
- Rename the error quark to be unique
- Update `AUTHORS`

D-Bus GLib Bindings 0.73 (13 Feb 2007)

==

- Allow passing of `NULL` to `strv` out arguments.
(Patch due to Luiz Augusto von Dentz <luiz.dentz@gmail.com>. Fixes bug #8795.)
- Make `uscore_to_wincaps` return `NULL` when passed `NULL`. (Fixes bug #8318.)
- Only respond to `NameOwnerChanged` if its one of our names.
(Patch by Kimmo Hämmäläinen <kimmo.hamalainen@nokia.com>. Fixes bug #8235.)
- Fix `dbus-binding-tool` to generate headers usable from C++.
(Thanks to Christian Persch <chpe@gnome.org>. Fixes bug #6358.)
- Only require `--prefix` for server side binding generation.
(Fixes reopened bug #4185.)
- Clarify documentation for `dbus_g_method_get_sender`.
(Fixes #8832.)
- Add new API for specifying the timeout in `DBusGProxy` calls.
(Patch due to S. Nalliammai <snallammai@novell.com>. Fixes bug #9832.)
- Don't check for `libxml2` when `expat` not found. (Fixes bugs #9894 and #9000.)

- Add configure flags --with-introspect-xml. (Fixes bug #9105)
- Use dbus_threads_init_default() rather than using own threading primitives.
(Fixes bug #9259.)
- Reduce dependency to dbus version 0.93, error out if correct version not found. (Patch due to Luiz Augusto von Dentz <luiz.dentz@gmail.com>.
Fixes bug #8793.)
- Allow dbus and dbus-glib to live in different prefixes. (Fixes bug #9384.)
- Add pkg-config support for uninstalled use.
(Fix due to Damien Carbery <damien.carbery@sun.com>. Fixes bug #9769.)

D-Bus GLib Bindings 0.72 (26 Oct 2006)

==

- Only use -Wfloat-equal if compiler supports it (Closes #7658.
Thanks
to Jens Granseuer <jensgr@gmx.net> for the patch).
- Return NULL from g_return_val_if_fail in dbus_g_proxy_begin_call (Closes #4159.)
- Add dbus-gidl.h to IGNORE_HFILES for doxygen docs
- Update tools/Makefile.am for new dbus-binding-tool behaviour
- Remove bashism in make-dbus-glib-error-enum.sh (Closes #6700).
- Fix introspection when object has exported properties.
(dbus-gobject:write_interface was completely broken)
- Fix thanks to mccann@jhu.edu. (Closes #8607).
- Require --prefix in dbus-binding-tool (Closes #4185).
- Don't shadow index. Rename usage of index to index_. Thanks
stdlib...
(Closes #8353).
- Fix small leak when marshal_table is destroyed (Closes #6870 with
patch from Richard Hult <richard@imendio.com>).
- Fixes crash if disposing one DBusGProxy causes another for the same
service to be unrefed in a destroyed callback.
- Use modern AC_INIT, AM_INIT_AUTOMAKE
- Clean generated run-with-tmp-session-bus.conf on make clean
- Actually run unit tests and checks when doing make distcheck
- Use TEST_CORE_SERVICE_BINARY path for core test service file
- Use dbus-daemon --introspect to generate DBus service introspect
xml
- Add tests for new interfaces functionality
- Bump GLib dependency to 2.6 (Closes #4390).
- Add gobject-2.0 to dbus-glib-1.pc.in
- Puts all exposed services in the org.freedesktop.DBus.GLib
namespace
- Update COPYING and HACKING to be correct for dbus-glib
- Move tests/glib to test/core
- Rename configure.in to configure.ac for modernity
- Fix memleak in lookup_or_register_specialized (Applies fix from
Daniel d'Andrada Tenório de Carvalho, closing bug #7352).

- Add an m4 directory and add gtk-doc.m4, which is installed in the tree by gtkdocize.

- tools/Makefile.am: Add tools/session.conf to EXTRA_DIST so make check

works from tarballs

- Fix compilation with -Werror
- Make test scripts run during out-of-tree compilation
- Fix out-of-tree compilation
- Replace doxygen with gtk-doc in INSTALL
- Commit patch to switch to gtk-doc with gtype-specialized doc and
- Updates from Marc-Andre Lureau <marcandre.lureau@gmail.com>, with minor cleanup. (Closes #7726.)

D-Bus GLib Bindings 0.71 (24 July 2006)

==

- Correctly installs a few missing headers
- Build was cleaned up a bit

D-Bus GLib Bindings 0.70 (17 July 2006)

==

- First release after bindings split
 - dbus-binding-tool heeds org.freedesktop.DBus.GLib.ClientCSymbol C symbol name annotations when generating glib client bindings
 - DBusGProxy can now be inherited from
 - Support added for generating bindings to arrays that are represented as GPtrArrays rather than GArrays (ie size-variable things, such as strings, objects, structs, etc).
 - Modification of the existing specialised types to have N type parameters (rather than the current 1 or 2 for arrays and dictionaries respectively). You can then use this to get a glib type to represent any arbitrary D-Bus struct type using dbus_g_type_get_struct. The only implementation of these types is with GValueArrays as before, but it's now possible to store these in arrays, emit them in signals, etc.
 - New methodbus_g_connection_open provides a way to open connections to an arbitrary address
 - Various bugs and memory leaks fixed
- Sleep after starting the peer server, before starting the peer client. This fixes random failures due to the race.

File = NEWS.pre-1-0

D-Bus 1.0.0 (08 November 2006)

==

- Documents updated with API/ABI guarantees
 - Added missing patch FreeBSD need to run out of the box
 - dbus-monitor now has a profile mode
 - AUTHORS file updated with names from the ChangeLog
- Thanks to everyone who helped get us here

D-Bus 1.0 RC 3 (0.95) (02 November 2006)

==

- DBUS_API_SUBJECT_TO_CHANGE no longer needs to be defined when building apps
- ./configure checks now work when cross compiling
- dbus-uuidgen --ensure is now run in the init script so there is no need to
run it in a post script
- dbus-uuidgen now writes out to /var/lib/dbus to work with systems that do not
have a writable /etc. Packages should install and own the /var/lib/dbus
directory
- recursive locks are now used when dbus_threads_init_default is called
- standard_session_servicedirs tag added to the session.conf
under a normal build this specifies these service directories:
/usr/local/share/dbus-1/services
/usr/share/dbus-1/services
\$HOME/.local/share/dbus-1/services
- fixed crash when a service directory is specified more than once
- fixed a crash in *BSD when watching config directories for changes
- fixed Irix build by using dirp->_dd_fd to get the file descriptor
- cleaned up the LOCAL_CREDS vs CMGCRED credential code so *BSD's
don't
crash here anymore
- dbus_message_iter_get_array_len deprecated
- cleanup-man-pages.sh added so packagers can clean up Doxygen man
page output
from 7 to 2 megs
- large documentation improvements
- numerous bug fixes

D-Bus 1.0 RC 2 (0.94) (14 October 2006)

==

- dbus-uuidgen binary added for future remote machine identification
packagers should call dbus-uuidgen --ensure in their post
- GetMachineId peer method added to the bus API
- dbus_connection_set_route_peer_messages API added to let the bus
send
peer messages directly to an app
- Autolaunch abilities added to dbus-launch with the --autolaunch flag
This feature allows libdbus to start a session bus if none can be
found

This is an internal feature and should not be used by scripts
DBUS_SESSION_BUS_ADDRESS is still the correct way to specify a session bus

- dbus-launch now prints out a simple key value pairs instead of shell scripts
 - if one of the shell flags aren't used
- support DBUS_BLOCK_ON_ABORT env variable to cause blocking waiting for gdb
- weak ref are now held for shared connections so the right things happen
 - this fixes some pretty major bugs with the way connections were handled
- Some refactoring for Windows (doesn't effect Unix)
- Solaris build fixes
- MacOSX build fixes
- Cross compile build fixes. We now assume getpwnam_r is posix and va_lists can be copied by value since we can't check this in a cross compile. If this is not true for a particular target is up to the developer to patch.
- Bug fixing all around

D-Bus 1.0 RC 1 (0.93) (14 September 2006)

==

- dbus_threads_init_default added for initalizing threads without the need for bindings
- Filters are now properly removed
- dbus_connection_open now holds a hard ref to shared connections
- We now print out a warning and do nothing when someone tries to close a shared connection
- The --introspect switch has been added to the bus for printing out introspection data without actually running the bus
- LOCAL_CREDS socket credentials are now supported for systems which support it such as NetBSD
- Generalize kqueue support so it works with NetBSD as well as FreeBSD
- Numerous bug fixes and memory leaks patched

D-Bus 0.92 (18 August 2006)

==

- Proper thread locking added to pending calls
- Threading semantics changed from init early to init before the second thread is started
- Correctly error out when an application tries to acquire or release the org.freedesktop.DBus name instead of sending false result codes
- kqueue directory watching code can now be used to monitor config file changes on FreeBSD

- --with-dbus-daemondir configure switch added so the daemon can be installed
 - separate from the user binaries
- Makefiles fixed for cygwin
- Various fixes for the ongoing Windows port
- Fixed docs and comments to use the D-Bus spelling instead of D-BUS
- Many memleaks and bugs fixed

D-Bus 0.91 (24 July 2006)

==

- Remove some lingering bits left over from the bindings split
- Fix assertion causing D-Bus applications to crash when checks are enabled
- Fix a timeout bug which would block applications from being auto started

D-Bus 0.90 (17 July 2006)

==

- API/ABI freeze for 1.0
- Bindings are now split out into seperate packages
- ListActivatableNames added as a method on the bus
- Removed deprecated dbus_connection_disconnect (use dbus_connection_close)
- Shared connections are now unreffed on disconnect
- Fixed pending calls for threaded enviornments
- Pending calls get timed out on connection disconnect
- dbus_connection_send_with_reply returns TRUE and a NULL pending call if you call it on a connection object which has been disconnected already
 - (it returns FALSE on Out of Memory errors only)
- dbus-monitor now correctly catches methods, not just signals
- dbus-monitor now prints object paths

D-BUS 0.62 (12 June 2006)

==

- Doc fixes
- Added support for all data-types for the dbus tools
- Fixed eavesdropping on method calls (dbus-monitor)
- Fixed silent dropping of method calls with interface=NULL
- Fixed console ownership problems in Solaris
- Fixed installation of dbus-signature.h and #include it in dbus/dbus.h
- Flush the user database cache on config reload
- GLib bindings:
 - Fix memory leaks
 - Fix properties in DBusGProxy so that they can be given in any order
 - Added lots of assertions to ensure correct use
 - Remove duplicated code
 - Fix static string pointer uses in GPtrArray-based collections
- Python bindings:
 - Remove reference to sys/cdefs.h

- Qt4 bindings:
 - Code reorganized
 - Added the dbusidl2cpp, dbuscpp2xml and dbus tools
 - Added example programs (ping-pong, complex ping-pong, listnames, chat)
 - Updated selftests
 - Fixed compilation and .moc- and .ui-file processing and cleaning
 - Made central classes derive from QObject
 - Enhance error reporting
 - Many bugfixes
- Mono bindings:
 - Minor bugfixes

D-BUS 0.61 (24 February 2006)

==

- Documentation all around
- dbus-launch now produces correct sh and csh syntax
- Nested arrays now work correctly
- GLib bindings:
 - Inheriting from DBusGProxy is now possible
 - GPtrArrays can now be marshalled
 - org.freedesktop.DBus.GLib.ClientCSymbol annotation added
 - Opening connections to arbitrary addresses now supported
- Python bindings:
 - sender_keyword and path_keyword keywords added to signal listener API
- Byte types now demarshal to unsigned char
- calling methods now do the correct thing
- Qt bindings:
 - both Qt3 and Qt4 bindings can be built at the same time
 - Use the standard org.freedesktop.DBus.Method.NoReply annotation for the "async" calls instead of creating one for us.
- Mono bindings:
 - 64bit arch fixes
- Massive bug fixing all around

D-BUS 0.60 (30 November 2005)

==

- major ABI/API changes - sonames changed
- RequestName queuing behavior has changed (refer to dbus-specification)
 - DBUS_NAME_FLAG_PROHIBIT_REPLACEMENT has been removed and DBUS_NAME_FLAG_ALLOW_REPLACEMENT has been added to the flags
- signals emitted by the bus now show up in the introspect data
- auth EXTERNAL now supported on BSD variants
- ReleaseName method added to the bus to allow a service to remove itself as owner of a bus name
- dbus_connection_read_write added for getting messages off the bus in the absence of a mainloop
- Qt4 bindings added and the Qt3 bindings have been deprecated
- python bindings:

- marshal using introspect data if available
- better exception handling and propagation
- private connections are now supported
- UTF-8 cleanups
- out_signature added to method decorators for specifying how the return values should be marshaled
- sender_keyword added to method decorators for specifying and argument to provide the unique name of the method caller
- async_callbacks added to method decorators
- multiple inheritance of classes now supported
- GLib bindings:
 - respect NoReply annotations
 - dbus_g_method_return_get_reply and dbus_g_method_return_send_reply added to the lowlevel code for use when the dbus-glib marshalling code is not adequate
- numerous bug fixes all around

D-BUS 0.50 (06 September 2005)

===

This is a minor release from 0.36.2. The series number has changed not because of any technical reasons but as an indication that we are moving closer to 1.0. It is hoped that this will be the last series to see major changes, most of which will be isolated to the GLib and Python bindings, as we transition to concentrate more on bug busting and code auditing.

- D-Bus builds on the Cygwin platform
- Makefile cleanups
- Various bug fixes
- Optimization of the dbus object tree
- Memleaks and GIL crasher bugs have been fixed in the Python bindings

D-BUS 0.36.2 (29 August 2005)

===

- Security: Restrict other users from connecting to another users session bus

D-BUS 0.36.1 (24 August 2005)

===

- Python Bindings:
 - fixed to work with hal-device-manager
 - For 64bit builds everything is installed to lib64/python2.4/ since Python can't handle multilib

D-BUS 0.36 (23 August 2005)

===

- Maximum sized of cached messages have been reduced to 10K
- Match rules now allow matching on arguments inside the message
- introspect.xsl XSLT style sheet added for formatting introspection data into XHTML for analysis
- Python bindings:
 - now have working type objects for explicit

- typecasting
- Variant type has been added
- Dictionaries, Variants and Arrays can all be passed the signature or type(s) of their children
- the optional timeout= keyword has been added when making method calls
- match on args has been implemented
- a .pth file has been added for dealing with libraries and python files being in different directories such as in 64bit installs
- various bug fixes
- GLib bindings:
 - deeply recursive types now supported
 - many symbols are no longer exported as part of the public API
 - various memleak and other bug fixes

D-BUS 0.35.2 (17 July 2005)

===

- Rename Unix Security Context to SELinux Security Context in API
- Fixed more dist errors that distcheck didn't pick up on
- Fixed various bugs in the python bindings that prevented them from working

D-BUS 0.35.1 (16 July 2005)

===

- Fixed dist error where python/dbus_bindings.pxd was being shipped instead of dbus_bindings.pxd.in
- Use this instead of the 0.35 tarball

D-BUS 0.35 (15 July 2005)

===

- --with-dbus-user added to the configure scripts for configuring the user the system bus runs on
- --with-console-auth-dir added to configure scripts for configuring the directory to look in for console user locks
- service files for auto-starting D-Bus services now has the ability to pass in command line arguments to the executable
- Huge auto-start bug squashed which caused some services not to start when requested in rapid succession
- SE-Linux security contexts can now be appended to messages for inspection by services that enforce their own security policies
- Colin says the GLib binding are ready for general consumption
- New GLib tutorial
- New GLib example code
- Python bindings are now version (0,42,0)
- Python bindings API has changed on the service side
- dbus.service has been split out as a separate module

- dbus.service.Service is renamed to dbus.service.BusName
- dbus.service.Object has swapped the bus_name and object_path constructor parameters to make it easier to do inheritance over the bus
- dbus.glib has been separated out in order to lessen the dependency on glib and to allow other mainloops to be integrated with the bindings including a planned generic mainloop for non-gui apps.
- Python bindings now acquire the GIL when calling back into the python interpreter. Fixes crashes when using threading and other random segfaults.
- New Python tutorial
- Numerous D-Bus bug fixes all around

D-BUS 0.34 (15 June 2005)

===

- dbus_connection_disconnect is deprecated in favor of dbus_connection_close
- The bus can now use D_NOTIFY (if available) to check when configuration files have changed and reload them
- New dbus_message_has_path/member/interface API added
- The Ping message from the org.freedesktop.DBus.Peer interface is now handled
- Complete glib bindings overhaul (and are still under construction)
- Tutorial now has an updated GLib section
- GLib bindings can now send/receive hash tables, arrays and other complex types
- Python bindings overhaul (most public facing API's done)
- Python bindings have been split up into separate files
- Python added new type classes for hinting to the marshaler what type to send over the wire
- Python bindings now have decorators for specifying exported methods and signals
- Numerous bug fixes

D-BUS 0.33 (25 Apr 2005)

===

- downgrade requirement from GTK+-2.6 to 2.4 for building gtk components
- python binding API's have been overhauled to be more "pythonic" and cleaner
- python bindings now export dbus.version which is set to (0,40,0)
- python bindings now implement the org.freedesktop.DBus.Introspectable interface
- python binding match rules are now more flexible
- make check has been fixed
- many, many major bug fixes

D-BUS 0.32 (29 Mar 2005)

===

- mono bindings now compiles correctly
- mono binding cleanups
- glib bindings generates wrappers for bus methods in dbus-glib-bindings.h
- glib binding cleanups
- users and groups can now be specified by UID and GID in config files
- numerous memory leak fixes
- various other fixes

D-BUS 0.31 (07 Mar 2005)

===

- land the new message args API and recursive type system
- add docs and fixed Doxygen warnings throughout source
- split out some functions not needed in libdbus to *-util.c source files
- take out type convenience functions
- libdbus now back below 150K
- booleans are now 32-bit instead of 8-bit
- specification updated
- grand renaming to strip out the use of "service" just say "name" instead (or "bus name" when ambiguous)
- rename dbus-daemon-1 to dbus-daemon throughout
- rename activation to auto-start
- auto-start on by default now
- note that libdbus is the low-level API
- python bindings updated to the new API
- mono bindings updated to the new API
- add 16 bit types
- dictionaries are now ARRAYS of DICT_ENTRY
- dbus-glib-tool renamed to dbus-binding-tool
- massive rewrite of the glib bindings
- saner names for the dbus interface, object path and service defines
- new functions for handling type signatures
- bump sonames for libdbus and libdbus-glib
- various small fixes

D-BUS 0.23 (11 Jan 2005)

===

- add setgroups() to drop supplementary groups
- updated SELinux support
- add an "at console" security policy
- fix a bug where org.freedesktop.DBus wasn't recognized as an existing service.
- error out if --enable-mono is explicitly set and mono libs can't be found
- set the max_match_rules_per_connection limit from the config file.
- removed dbus_bug_get_with_g_main since it's been replaced by

- dbus_g_bus_get
- fix fd leaks in socket code
- lots and lots of mono binding updates, including fixes to make it compatible with Mono 1.1.3
- added --nofork option to override config file setting at runtime
- added support for int64 and uint64 to the python bindings
- lots of python binding updates
- config file DTD updates
- use ServiceOwnerChanges signal instead of ServiceCreated and ServiceDeleted
- fixes to the authentication code
- new init script for Slackware
- print out the pid even when --fork is passed
- increase preallocation sizes in DBusMessage to heavily reduce reallocs
- lots of performance enhancements
- lots more small bug fixes

D-BUS 0.22

===

- add --reply-timeout to dbus-send
- fix a memleak
- fix Solaris/Forte build
- switch to AFL 2.1 rather than 2.0 to address patent termination clause concerns
- add SELinux support
- mostly repair libxml backend for config parser, still doesn't pass out of memory tests
- fix distcheck to include language bindings
- add GetConnectionUnixUser method on bus driver
- also for UnixProcessID
- lots of Python, Mono, other binding fixes
- change GLib bindings to not include dbus/dbus.h (fully encapsulate libdbus)
- pass paths as strings, not arrays of string
- add message signature header field
- cleanups to marshaling code
- clean up authentication code
- reload conf files on SIGHUP
- rename SERVICE/SENDER_SERVICE to DESTINATION/SENDER
- fix circular conf file inclusion
- allow empty arrays
- tons of other small bugfixes

D-BUS 0.21

===

- implement "auto activation" flag on messages, so the destination service can be launched automatically
- fix a bug in custom type marshaling

- optimize case where multiple apps activate the same service (avoid "thundering herd")
- add dynamic service file discovery/reloading
- fix a busy loop when blocking for a reply
- fix a 64-bit crash involving varargs
- fix a bus crash when processing an AcquireService
- allow appending TYPE_BYTE via append_args_valist
- fix dicts-inside-dicts
- enhancements to Python and Qt bindings

D-BUS 0.20

===

This release lands some very large API changes and numerous bugfixes. The list of changes is too large to fully document here; please refer to the documentation, and message-bus-list archives.

D-BUS 0.13

===

This is probably the last release before landing the large API changes on the "dbus-object-names" branch.

- fix system bus to always use filesystem socket; anyone can create any abstract socket, which isn't secure since if you can crash the system bus you'd be able to replace it.
- add DTD for configuration file
- improve specification a bit

D-BUS 0.12

===

- fix "service messagebus status" on Red Hat
- fix demarshaling of DBUS_TYPE_NAMED
- fix "eval `dbus-launch --exit-with-session`" to exit properly
- fix build without --prefix
- useless fooling with Mono bindings
- useless fooling with gcj bindings
- fix srcdir != builddir
- fix various compiler warnings and other issues
- add get/set data to DBusMessage
- fix headers for C++
- OS X build fixes
- abstract domain sockets support (Linux only)
- add dbus-cleanup-sockets utility for people not using linux
- be consistent about defaulting to --session/--system with command line tools
- merge in policies from included config files
- fix build on non-x86
- docs updates

- lots of other bugfixes

D-BUS 0.11

===

- add --enable-docs to turn off/on the docbook stuff (doesn't cover doxygen stuff yet)
- make people define DBUS_API_SUBJECT_TO_CHANGE and read warning in README so they don't expect the API to be frozen already
- rename .pc files to "dbus-1.pc" instead of "dbus-1.0.pc" etc. - this will require changing pkg-config invocations
- some docs cleanups
- add man pages for all executables
- allow send to/from bus driver in the default system.conf
- fix user lookup bug
- implement dbus-launch to launch the session message bus
- fix some thread deadlocks
- some performance profiling/optimization
- add dbus_bus_activate_service() function
- fix some minor bugs here and there
- install Red Hat initscript in the right place

D-BUS 0.10

===

- reversed order of args to dbus_message_new()
- renamed dbus_message_name_is() and some other functions
- change DbusWatch to have dbus_watch_handle() similar to dbus_timeout_handle(), drop connection/server-specific handle routines
- change message serials to be unsigned
- implemented <allow>/<deny>/<limit> features for config file; system bus now has a deny-all policy by default.
- system.conf has <includedir>system.d</includedir> so packages can install additions to the default policy to <allow> the messages they need. e.g. CUPS might install a cups.conf - see test/data/valid-config-files/system.d/test.conf for an example.
- add timeouts for authentication, activation
- add glib-style "checks" on public API, enable those by default, disable assertions by default
- add GMainContext argument to GLib setup functions, can be NULL for default context. Needed for threads.
- add 64-bit integer type
- validate type of standard message header fields
- consider messages in the org.freedesktop.Local namespace to be invalid (to avoid fake disconnect

messages for example)

- fix assorted memory leaks and other bugs in the SHA-1 auth mechanism
- cache user database information (groups user is in, etc.) helps a lot with NIS
- always store uid_t, pid_t, gid_t in "ulong" rather than "int"
- implement config file settings for which users can connect
- SHA-1 unit test
- dbus-send, dbus-monitor command line utilities
- fixed lots of misc crashes and other bugs

D-BUS 0.9

===

- implemented a test case for service activation, and fixed many bugs exposed by that
- implemented recursive argument marshaling/demarshaling for messages, allowing multidimensional arrays
- fixed up integration of message dispatch with main loop by adding a callback on change of dispatch status
- add a pidfile feature to daemon
- some build fixes
- clean up unix domain sockets on exit
- add --print-address and the ability to create a random server address in a temporary directory

D-BUS 0.8

===

- fix dumb bug in 0.7

D-BUS 0.7

===

- implement configuration file used to control bus characteristics
- implement daemon mode, changing user ID, and other system bus features
- add init scripts for systemwide bus
- add "make check-coverage" target to check test coverage
- more test suite additions
- many, many bugfixes
- many API changes/fixes

D-BUS 0.6

===

- Vastly improved bus daemon test suite
- Lots of misc. bugfixes and memory leak fixes
- Support for marshalling key/value data

- Activation improvements.

D-BUS 0.5

===

- Specification updates
- port to OS X and other BSD variants
- port to Solaris
- Partial work on cookie-based authentication
- Thread safety fixes
- Lots of misc. bugfixes
- Support for more array types
- Add data slots to DBusServer
- DBusString security audit fixes
- Fix for systems (or valgrind) with unaligned malloc blocks

D-BUS 0.4

===

- Preliminary activation support.
- Better authentication test suite
- Bus test program
- Specification updates
- Thread safety
- Bug fixes

D-BUS 0.3

===

- Preliminary limitations
- Message sending works
- Bus client
- Array marshalling/demarshalling
- Services
- Better OOM handling in the bus
- In-proc debug transport
- Transport/server address support

D-BUS 0.2

===

- Include test code in the tarball.

D-BUS 0.1

===

- Initial release.

File = NEWS.pre-1-2

D-Bus 1.2.1 (04 April)

==

- Due to issues putting the re-licensing effort on hold indefinitely, it has been decided to move to 1.2.x versioning scheme. Being that 1.1.20 is considered to also be 1.2.0 and this being the second release in the 1.2.x stable series we have versioned this release 1.2.1. This release contains a number of bug fixes identified after 1.1.20.
- compiles under some older versions of glibc
- compiles without X support once again
- fix stuck server grab if dbus-launch is run in an existing D-Bus X session
- various Mac OSX build fixes added
- don't use the broken poll call on Mac OSX
- better checks for linker flag support should allow D-Bus to link under various linkers
- exit_on_disconnect is set after the connection registers with a bus so we don't exit if we get a disconnect during the handshake
- dicts now work correctly with dbus-send
- inotify backend is now less aggressive
- pending calls expire correctly
- memleak of uuid when the bus is autolaunched fixed

D-Bus 1.1.20 - "Conisten Water" (27 Febuary)

==

- This is the next generation supported STABLE release of D-Bus. For all intents and purposes this is the 1.2.0 release WITHOUT the planned X11/MIT license change due to a couple of license holders who have yet to respond. For the most part this license change is being persued to simplify licensing issues and fix a couple of licensing courner cases. When this happens D-Bus will be released under the 1.2.0 version.
- D-Bus 1.0.x effectively goes into security fix mode and will only be updated for major issues.
- Fixed CVE-2008-0595 - security policy of the type <allow send_interface="some.interface.WithMethods"/> work as an implicit allow for messages sent without an interface bypassing the default deny rules and

potentially allowing restricted methods exported on the bus to be executed by unauthorized users.

- Fixes dbus-launch so the session bus goes away so does D-Bus
- Builds against latest gcc/glibc changes
- Correctly unref connections without guids during shutdown
- About the name: Submitted by Greg K Nicholson, Conisten Water is a lake in Cumbria, England where several water speed records have been broken. Between 1956 and 1959 Sir Malcolm's son Donald Campbell set four successive records on the lake in Bluebird K7, a hydroplane. (Wikipedia http://en.wikipedia.org/wiki/Coniston_Water#Waterspeed_record)

D-Bus 1.1.4 - 1.2.0RC2 (17 January 2007)

==

- Fixes inotify support

D-Bus 1.1.3 - 1.2.0RC1 (15 January 2007)

==

- This release is intended to be Release Candidate 1 of major release D-Bus 1.2.0. If nothing is found to be wrong with this release it will become 1.2.0 within a week. If we need to make major changes we will release an RC2 and start the process over again.
- This is a development release, so API's may still change if problems are found (though this is extremely unlikely).
- DTD for the introspection format is fixed and uploaded to the servers
- Sources now reside in a git repository at <http://gitweb.freedesktop.org/?p=dbus/dbus.git;a=summary>
- Argument path matching of the type `arg0path='/aa/bb/'` is now supported (see the specification for more information)
- New error `org.freedesktop.DBus.Error.ObjectPathInUse` added
- Autolaunched busses now save their parameters in X11 if possible making them behave closer to busses launched through the normal mechanisms
- inotify is now the default backend for watching configuration file changes

- More support for the AIX platform has been added
- Numerous bug fixes and performance enhancements

D-Bus 1.1.2 (27 July 2007)

==

- This release is intended to be a feature complete beta for stable release 1.2.0, please test it. 1.2.0 will follow pretty soon if no major problems are found. We'll do more betas if significant changes are made.
- This is a development release, so API's may still change if problems are found (though we will try hard not to).
- The system bus now supports starting services on demand. This uses a setuid helper program because system bus daemon runs as a nobody user, while services it launches may need to run as a different user.

Extra eyes auditing the setuid helper are encouraged and would be timely right now, before 1.2.0

A design doc is available in doc/system-activation.txt

- The TCP address format has been enhanced, such that TCP may be actually usable. The dbus-daemon man page describes the new elements in the address format. 1.1.1 had added an `all_interfaces` flag to the format, which has been removed in favor of a cleaner approach.
- Some thread-related bugs have been fixed, these are important fixes if you are using multiple threads with libdbus, and not important otherwise.

D-Bus 1.1.1 (18 June 2007)

==

- This is a development release, unless you need specific functionality please use the stable releases as API's may change (though we will try hard not to)
- The bus daemon now generates a globally-unique ID for itself, which is available using the convenience function `dbus_bus_get_id()`. Use this as a unique ID for a user's session, for example.
- `dbus_server_get_id()`, `dbus_connection_get_server_id()` now available to access the unique ID of a particular address
- `dbus_watch_get_fd()` deprecated since it had unclear cross-platform semantics.

- dbus_watch_get_unix_fd() and dbus_watch_get_socket() replace it.
- support ANONYMOUS mechanism for authentication, which allows a client to authenticate as nobody in particular
- add API dbus_connection_set_allow_anonymous() which will allow the message stream to begin if the client auths as anonymous (otherwise, the client will be dropped unless they auth as a user).
- the ANONYMOUS support means you can now use D-Bus (without a bus daemon) as a protocol for a network service provided to anonymous Internet or LAN clients
- many internal changes to better support the Windows port, though the port is still not complete in this release
- some improved documentation and return_if_fail checks
- some small bug fixes

D-Bus 1.1.0 (25 May 2007)

==

- first release in the development series, unless you need specific functionality please use the stable releases as API's may change (though we will try hard not to)
- better eavesdropping support now picks up reply messages for debugging
- .pc file now lists the directory the daemon is installed into (daemondir)
- GetAll call added to the properties interface
- support for message serialization added for use with external transports like TUBES!!!
- many bugs fixed

File = NEWS.~1~

D-Bus 1.6.8 (2012-09-28)

==

The "Fix one thing, break another" release.

â€¢ Follow up to CVE-2012-3524: The additional hardening work to use __secure_getenv() as a followup to bug #52202 broke certain configurations of gnome-keyring. Given the difficulty of making this work without extensive changes to gnome-keyring, use of __secure_getenv() is deferred.

D-Bus 1.6.6 (2012-09-28)

==

The "Clear the environment in your setuid binaries, please" release.

â€¢ CVE-2012-3524: Don't access environment variables (fd.o #52202)
Thanks to work and input from Colin Walters, Simon McVittie,
Geoffrey Thomas, and others.

â€¢ Unix-specific:

Â· Fix compilation on Solaris (fd.o #53286, Jonathan Perkin)
Â· Work around interdependent headers on OpenBSD by including
sys/types.h
before each use of sys/socket.h (fd.o #54418, Brad Smith)

D-Bus 1.6.4 (2012-07-18)

==

â€¢ Detect that users are "at the console" correctly when configured
with

a non-default path such as --enable-console-auth-dir=/run/console
(fd.o #51521, Dave Reisner)

â€¢ Remove an incorrect assertion from DBusTransport (fd.o #51657,
Simon McVittie)

â€¢ Make --enable-developer default to "no" (regression in 1.6.2;
fd.o #51657, Simon McVittie)

â€¢ Windows-specific:

Â· Launch dbus-daemon correctly if its path contains a space
(fd.o #49450, Wolfgang Baron)

D-Bus 1.6.2 (2012-06-27)

==

The "Ice Cabbage" release.

â€¢ Change how we create /var/lib/dbus so it works under Automake >=
1.11.4
(fd.o #51406, Simon McVittie)

â€¢ Don't return from dbus_pending_call_set_notify with a lock held on
OOM
(fd.o #51032, Simon McVittie)

â€¢ Disconnect "developer mode" (assertions, verbose mode etc.) from
Automake maintainer mode. D-Bus developers should now configure with
--enable-developer. Automake maintainer mode is now on by default;
distributions can disable it with --disable-maintainer-mode.
(fd.o #34671, Simon McVittie)

â€¢ Automatically define DBUS_STATIC_BUILD in static-only Autotools
builds,

fixing linking when targeting Windows (fd.o #33973; william, Simon McVittie)

â€¢ Unix-specific:

Â· Check for libpthread under CMake on Unix (fd.o #47237, Simon McVittie)

D-Bus 1.6.0 (2012-06-05)

==

The "soul of this machine has improved" release.

This version starts a new stable branch of D-Bus: only bug fixes will be accepted into 1.6.x. Other changes will now go to the 1.7.x branch.

Summary of changes since 1.4.x:

â€¢ New requirements

Â· PTHREAD_MUTEX_RECURSIVE on Unix

Â· compiler support for 64-bit integers (int64_t or equivalent)

â€¢ D-Bus Specification v0.19

â€¢ New dbus-daemon features

Â· <allow_own_prefix="com.example.Service"/> rules allow the service to

own names like com.example.Service.Instance3

Â· optional systemd integration when checking at_console policies

Â· --nopidfile option, mainly for use by systemd

Â· path_namespace and arg0namespace may appear in match rules

Â· eavesdropping is disabled unless the match rule contains

eavesdrop=true

â€¢ New public API

Â· functions to validate various string types (dbus_validate_path() etc.)

Â· dbus_type_is_valid()

Â· DBusBasicValue, a union of every basic type

â€¢ Bug fixes

Â· removed an unsafe reimplementaion of recursive mutexes

Â· dbus-daemon no longer busy-loops if it has far too many file descriptors

Â· dbus-daemon.exe --print-address works on Windows

Â· all the other bug fixes from 1.4.20

â€¢ Other major implementation changes

Â· on Linux, dbus-daemon uses epoll if supported, for better scalability

Â· dbus_threads_init() ignores its argument and behaves like dbus_threads_init_default() instead

• removed the per-connection link cache, improving dbus-daemon performance

• Developer features

• optional Valgrind instrumentation (`--with-valgrind`)

• optional Stats interface on the dbus-daemon (`--enable-stats`)

• optionally abort whenever `malloc()` fails (`--enable-embedded-tests` and export `DBUS_MALLOCCANNOTFAIL=1`)

Changes since 1.5.12:

• Be more careful about monotonic time vs. real time, fixing `DBUS_COOKIE_SHA1` spec-compliance (fd.o #48580, David Zeuthen)

• Don't use `install(1)` within the source/build trees, fixing the build as non-root when using OpenBSD `install(1)` (fd.o #48217, Antoine Jacoutot)

• Add missing commas in some tcp and nonce-tcp addresses, and remove an unused duplicate copy of the nonce-tcp transport in Windows builds (fd.o #45896, Simon McVittie)

D-Bus 1.5.12 (2012-03-27)
==

The "Big Book of Science" release.

• Add public API to validate various string types:

`dbus_validate_path()`, `dbus_validate_interface()`,
`dbus_validate_member()`,
`dbus_validate_error_name()`, `dbus_validate_bus_name()`,
`dbus_validate_utf8()`
(fd.o #39549, Simon McVittie)

• Turn `DBusBasicValue` into public API so bindings don't need to invent their own "union of everything" type (fd.o #11191, Simon McVittie)

• Enumerate data files included in the build rather than using `find(1)` (fd.o #33840, Simon McVittie)

• Add support for policy rules like `<allow own_prefix="com.example.Service"/>` in dbus-daemon (fd.o #46273, Alban Crequy)

• Windows-specific:

• make `dbus-daemon.exe --print-address` (and `--print-pid`) work again on Win32, but not on WinCE (fd.o #46049, Simon McVittie)

Â· fix duplicate case value when compiling against mingw-w64
(fd.o #47321, Andoni Morales Alastruey)

D-Bus 1.5.10 (2012-02-21)
==

The "fire in Delerium" release.

On Unix platforms, PTHREAD_MUTEX_RECURSIVE (as specified in POSIX 2008 Base and SUSv2) is now required.

â€¢ D-Bus Specification 0.19:

Â· Formally define unique connection names and well-known bus names, and document best practices for interface, bus, member and error names,

and object paths (fd.o #37095, Simon McVittie)

Â· Document the search path for session and system services on Unix, and

where they should be installed by build systems (fd.o #21620, fd.o #35306;

Simon McVittie)

Â· Document the systemd transport (fd.o #35232, Lennart Poettering)

â€¢ Make dbus_threads_init() use the same built-in threading implementation

as dbus_threads_init_default(); the user-specified primitives that it

takes as a parameter are now ignored (fd.o #43744, Simon McVittie)

â€¢ Allow all configured auth mechanisms, not just one (fd.o #45106, Pavel Strashkin)

â€¢ Improve cmake build system (Ralf Habacker):

Â· simplify XML parser dependencies (fd.o #41027)

Â· generate build timestamp (fd.o #41029)

Â· only create batch files on Windows

Â· fix option and cache syntax

Â· add help-options target

Â· share dbus-arch-deps.h.in with autotools rather than having our own version (fd.o #41033)

â€¢ Build tests successfully with older GLib, as found in e.g. Debian 6

(fd.o #41219, Simon McVittie)

â€¢ Avoid use of deprecated GThread API (fd.o #44413, Martin Pitt)

â€¢ Build documentation correctly if man2html doesn't support filenames on

its command-line (fd.o #43875, Jack Nagel)

â€¢ Improve test coverage. To get even more coverage, run the tests with

DBUS_TEST_SLOW=1 (fd.o #38285, #42811; Simon McVittie)

â€¢ Reduce the size of the shared library by moving functionality only used

by dbus-daemon, tests etc. into their internal library and deleting unused code (fd.o #34976, #39759; Simon McVittie)

â€¢ Add dbus-daemon --nopidfile option, overriding the configuration, for

setups where the default configuration must include <pidfile/> to avoid breaking traditional init, but the pid file is in fact unnecessary; use

it under systemd to improve startup time a bit (fd.o #45520, Lennart Poettering)

â€¢ Optionally (if configured --with-valgrind) add instrumentation to debug

libdbus and associated tools more meaningfully under Valgrind (fd.o #37286, Simon McVittie)

â€¢ Improve the dbus-send(1) man page (fd.o #14005, Simon McVittie)

â€¢ Make dbus-protocol.h compatible with C++11 (fd.o #46147, Marc Mutz)

â€¢ If tests are enabled and DBUS_MALLOC_CANNOT_FAIL is set in the environment,

abort on failure to malloc() (like GLib does), to turn runaway memory leaks

into a debuggable core-dump if a resource limit is applied (fd.o #41048, Simon McVittie)

â€¢ Don't crash if realloc() returns NULL in a debug build (fd.o #41048,

Simon McVittie)

â€¢ Unix-specific:

Â· Replace our broken reimplementations of recursive mutexes, which has

been broken since 2006, with an ordinary pthreads recursive mutex (fd.o #43744; Sigmund Augdal, Simon McVittie)

Â· Use epoll(7) for a more efficient main loop in Linux; equivalent patches

welcomed for other OSs' equivalents like kqueue, /dev/poll, or Solaris

event ports (fd.o #33337; Simon McVittie, Ralf Habacker)

Â· When running under systemd, use it instead of ConsoleKit to check

whether to apply at_console policies (fd.o #39609, Lennart Poettering)
Â· Avoid a highly unlikely fd leak (fd.o #29881, Simon McVittie)
Â· Don't close invalid fd -1 if getaddrinfo fails (fd.o #37258, eXeC001er)
Â Â· Don't touch ~/.dbus and ~/.dbus-keyrings when running 'make installcheck'
(fd.o #41218, Simon McVittie)
Â· Stop pretending we respect XDG_DATA_DIRS for system services: the launch helper doesn't obey environment variables to avoid privilege escalation attacks, so make the system bus follow the same rules
(fd.o #21620, Simon McVittie)

â€¢ Windows-specific:

Â· Find the dbus-daemon executable next to the shared library (fd.o #41558;
Jesper Dam, Ralf Habacker)
Â· Remove the faulty implementation of _dbus_condvar_wake_all (fd.o #44609,
Simon McVittie)

D-Bus 1.5.8 (2011-09-21)

==

The "cross-metering" release.

In addition to dead code removal and refactoring, this release contains all of the bugfixes from 1.4.16.

â€¢ Clean up dead code, and make more warnings fatal in development builds

(fd.o #39231, fd.o #41012; Simon McVittie)

â€¢ If full test coverage is requested via --enable-tests, strictly require

Python, pygobject and dbus-python, which are required by some tests; if not,

and Python is missing, skip those tests rather than failing

(fd.o #37847, Simon McVittie)

â€¢ When using cmake, provide the same version-info API in the installed headers

as for autotools (DBUS_VERSION, etc.) (fd.o #40905, Ralf Habacker)

â€¢ Add a regression test for fd.o #38005 (fd.o #39836, Simon McVittie)

â€¢ Make "NOCONFIGURE=1 ./autogen.sh" not run configure (Colin Walters)

â€¢ Add `_DBUS_STATIC_ASSERT` and use it to check invariants (fd.o #39636, Simon McVittie)

â€¢ Fix duplicates in authors list (Ralf Habacker)

â€¢ Fix broken links from `dbus-tutorial.html` if `$(htmldir) != $(docdir)` (fd.o #39879, Chris Mayo)

â€¢ Fix a small memory leak, and a failure to report errors, when updating a service file entry for activation (fd.o #39230, Simon McVittie)

â€¢ Unix-specific:

Â· Clean up (non-abstract) Unix sockets on bus daemon exit (fd.o #38656;

Brian Cameron, Simon McVittie)

Â· On systems that use `libcap-ng` but not `systemd`, drop supplemental groups

when switching to the daemon user (Red Hat #726953, Steve Grubb)

Â· Make the `cmake` build work again on GNU platforms (fd.o #29228, Simon McVittie)

Â· Fix compilation on non-C99 systems that have `inttypes.h` but not `stdint.h`, like Solaris (fd.o #40313, Dagobert Michelsen)

Â· Define `MSG_ALIGN`, `MSG_LEN`, `MSG_SPACE` on Solaris < 10 (fd.o #40235, Simon McVittie)

Â· Cope with Unixes that don't have `LOG_PERROR`, like Solaris 10 (fd.o #39987, Simon McVittie)

Â· Cope with platforms whose `vsnprintf` violates both POSIX and C99, like Tru64, IRIX and HP-UX (fd.o #11668, Simon McVittie)

â€¢ Windows-specific:

Â· Fix compilation on MSVC, which doesn't understand "inline" with its

C99 meaning (fd.o #40000; Ralf Habacker, Simon McVittie)

Â· Fix misuse of `GPid` in `test/dbus-daemon.c` (fd.o #40003, Simon McVittie)

Â· Fix cross-compilation to Windows with Automake (fd.o #40003, Simon McVittie)

D-Bus 1.5.6 (2011-07-29)

==

The "weird, gravy-like aftertaste" release.

In addition to new features and refactoring, this release contains all of the bugfixes from 1.4.14.

Potentially incompatible (Bustle and similar debugging tools will need changes to work as intended):

â€¢ Do not allow match rules to "eavesdrop" (receive messages intended for a different recipient) by mistake: eavesdroppers must now opt-in to this behaviour by putting "eavesdrop='true'" in the match rule, which will not have any practical effect on buses where eavesdropping is not allowed (fd.o #37890, Cosimo Alfarano)

Other changes:

â€¢ D-Bus Specification version 0.18 (fd.o #37890, fd.o #39450, fd.o #38252; Cosimo Alfarano, Simon McVittie)
 Â· add the "eavesdrop" keyword to match rules
 Â· define eavesdropping, unicast messages and broadcast messages
 Â· stop claiming that match rules are needed to match unicast messages to you
 Â· promote the type system to be a top-level section

â€¢ Use `DBUS_ERROR_OBJECT_PATH_IN_USE` if `dbus_connection_try_register_object_path` or `dbus_connection_try_register_fallback` fails, not `...ADDRESS_IN_USE`, and simplify object-path registration (fd.o #38874, JiÅ™Å™ KlimeÅ™)

â€¢ Consistently use atomic operations on everything that is ever manipulated via atomic ops, as was done for changes to `DBusConnection`'s `refcount` in 1.4.12 (fd.o #38005, Simon McVittie)

â€¢ Fix a file descriptor leak when connecting to a TCP socket (fd.o #37258, Simon McVittie)

â€¢ Make "make check" in a clean tree work, by not running tests until test data has been set up (fd.o #34405, Simon McVittie)

â€¢ The `dbus-daemon` no longer busy-loops if it has a very large number of file descriptors (fd.o #23194, Simon McVittie)

â€¢ Refactor message flow through dispatching to avoid locking violations if the bus daemon's message limit is hit; remove the per-connection link cache,

which was meant to improve performance, but now reduces it (fd.o #34393, Simon McVittie)

â€¢ Some cmake fixes (Ralf Habacker)

â€¢ Remove dead code, mainly from DBusString (fd.o #38570, fd.o #39610; Simon McVittie, Lennart Poettering)

â€¢ Stop storing two extra byte order indicators in each D-Bus message (fd.o #38287, Simon McVittie)

â€¢ Add an optional Stats interface which can be used to get statistics from a running dbus-daemon if enabled at configure time with --enable-stats (fd.o #34040, Simon McVittie)

â€¢ Fix various typos (fd.o #27227, fd.o #38284; Sascha Silbe, Simon McVittie)

â€¢ Documentation (fd.o #36156, Simon McVittie):
 Â· let xsltproc be overridden as usual: ./configure XSLTPROC=myxsltproc
 Â· install more documentation automatically, including man2html output
 Â· put dbus.devhelp in the right place (it must go in \${htmldir})

â€¢ Unix-specific:
 Â· look for system services in /lib/dbus-1/system-services in addition to all the other well-known locations; note that this should always be /lib, even on platforms where shared libraries on the root FS would go in /lib64, /lib/x86_64-linux-gnu or similar (fd.o #35229, Lennart Poettering)
 Â· opt-in to fd passing on Solaris (fd.o #33465, Simon McVittie)

â€¢ Windows-specific (Ralf Habacker):
 Â· fix use of a mutex for autolaunch server detection
 Â· don't crash on malloc failure in _dbus_printf_string_upper_bound

D-Bus 1.5.4 (2011-06-10)
==

Security (local denial of service):

â€¢ Byte-swap foreign-endian messages correctly, preventing a long-standing local DoS if foreign-endian messages are relayed through the dbus-daemon

(backporters: this is git commit
c3223ba6c401ba81df1305851312a47c485e6cd7)
(CVE-2011-2200, fd.o #38120, Debian #629938; Simon McVittie)

New things:

â€¢ The constant to use for an infinite timeout now has a name,
DBUS_TIMEOUT_INFINITE. It is numerically equivalent to 0x7fffffff
(INT32_MAX)
which can be used for source compatibility with older versions of
libdbus.

â€¢ If GLib and DBus-GLib are already installed, more tests will be
built,
providing better coverage. The new tests can also be installed via
./configure --enable-installed-tests
for system integration testing, if required. (fd.o #34570, Simon
McVittie)

Changes:

â€¢ Consistently use atomic operations for the DBusConnection's
refcount,
fixing potential threading problems (fd.o #38005, Simon McVittie)

â€¢ Don't use -Wl,--gc-sections by default: in practice the size
decrease is
small (300KiB on x86-64) and it frequently doesn't work in unusual
toolchains. To optimize for minimum installed size, you should
benchmark
various possibilities for CFLAGS and LDFLAGS, and set the best flags
for
your particular toolchain at configure time. (fd.o #33466, Simon
McVittie)

â€¢ Use #!/bin/sh for run-with-tmp-session-bus.sh, making it work on
*BSD
(fd.o #35880, Timothy Redaelli)

â€¢ Use ln -fs to set up dbus for systemd, which should fix
reinstallation
when not using a DESTDIR (fd.o #37870, Simon McVittie)

â€¢ Windows-specific changes:
Â· don't try to build dbus-daemon-launch-helper (fd.o #37838, Mark
Brand)

D-Bus 1.5.2 (2011-06-01)
==

The "Boar Hunter" release.

Notes for distributors:

This version of D-Bus no longer uses `-fPIE` by default. Distributions wishing to harden the `dbus-daemon` and `dbus-launch-helper` can re-enable this if their toolchain supports it reliably, via something like:

```
./configure CFLAGS=-fPIE LDFLAGS="-pie -Wl,-z,relro"
```

or by using distribution-specific wrappers such as Debian's `hardening-wrapper`.

Changes:

- â€¢ D-Bus Specification v0.17
 - Â· Reserve the extra characters used in signatures by GVariant (fd.o #34529, Simon McVittie)
 - Â· Define the ObjectManager interface (fd.o #34869, David Zeuthen)
- â€¢ Don't force `-fPIE`: distributions and libtool know better than we do whether it's desirable (fd.o #16621, fd.o #27215; Simon McVittie)
- â€¢ Allow `--disable-gc-sections`, in case your toolchain offers the `-ffunction-sections`, `-fdata-sections` and `-Wl,--gc-sections` options but they're broken, as seen on Solaris (fd.o #33466, Simon McVittie)
- â€¢ Install `dbus-daemon` and `dbus-daemon-launch-helper` in a more normal way (fd.o #14512; Simon McVittie, loosely based on a patch from Luca Barbato)
- â€¢ Ensure that maintainers upload documentation with the right permissions (fd.o #36130, Simon McVittie)
- â€¢ Don't force users of `libdbus` to be linked against `-lpthread`, `-lrt` (fd.o #32827, Simon McVittie)
- â€¢ Log system-bus activation information to `syslog` (fd.o #35705, Colin Walters)
- â€¢ Log messages dropped due to quotas to `syslog` (fd.o #35358, Simon McVittie)
- â€¢ Make the `nonce-tcp` transport work on Unix (fd.o #34569, Simon McVittie)
- â€¢ On Unix, if `/var/lib/dbus/machine-id` cannot be read, try `/etc/machine-id` (fd.o #35228, Lennart Poettering)
- â€¢ In the regression tests, don't report fds as "leaked" if they were open on startup (fd.o #35173, Simon McVittie)
- â€¢ Make `dbus-monitor` bail out if asked to monitor more than one bus, rather than silently using the last one (fd.o #26548, Will Thompson)

â€¢ Clarify documentation (fd.o #35182, Simon McVittie)
â€¢ Clean up minor dead code and some incorrect error handling
(fd.o #33128, fd.o #29881; Simon McVittie)
â€¢ Check that compiler options are supported before using them
(fd.o #19681,
Simon McVittie)
â€¢ Windows:
â€¢ Remove obsolete workaround for winioctl.h (fd.o #35083, Ralf
Habacker)

D-Bus 1.5.0 (2011-04-11)
==

The "you never know when you need to tow something from your giant
flying shark" release.

â€¢ D-Bus Specification v0.16
Â· Add support for path_namespace and arg0namespace in match rules
(fd.o #24317, #34870; Will Thompson, David Zeuthen, Simon
McVittie)
Â· Make argNpath support object paths, not just object-path-like
strings,
and document it better (fd.o #31818, Will Thompson)
â€¢ Let the bus daemon implement more than one interface (fd.o
#33757,
Simon McVittie)
â€¢ Optimize _dbus_string_replace_len to reduce waste (fd.o #21261,
Roberto Guido)
â€¢ Require user intervention to compile with missing 64-bit support
(fd.o #35114, Simon McVittie)
â€¢ Add dbus_type_is_valid as public API (fd.o #20496, Simon
McVittie)
â€¢ Raise UnknownObject instead of UnknownMethod for calls to
methods on
paths that are not part of the object tree, and UnknownInterface
for calls
to unknown interfaces in the bus daemon (fd.o #34527, Lennart
Poettering)

D-Bus 1.4.8 (2011-04-08)
==

The "It's like the beginning of a lobster" release.

â€¢ Rename configure.in to configure.ac, and update it to modern
conventions
(fd.o #32245; Javier JardÃ³n, Simon McVittie)
â€¢ Correctly give XDG_DATA_HOME priority over XDG_DATA_DIRS (fd.o
#34496,
Anders Kaseorg)
â€¢ Prevent X11 autolaunching if \$DISPLAY is unset or empty, and add
--disable-x11-autolaunch configure option to prevent it altogether

in embedded environments (fd.o #19997, NB#219964; Simon McVittie)
â€¢ Install the documentation, and an index for Devhelp (fd.o #13495,
Debian #454142; Simon McVittie, Matthias Clasen)
â€¢ If checks are not disabled, check validity of string-like types and
booleans when sending them (fd.o #16338, NB#223152; Simon McVittie)
â€¢ Add UnknownObject, UnknownInterface, UnknownProperty and PropertyReadOnly
errors to dbus-shared.h (fd.o #34527, Lennart Poettering)
â€¢ Break up a huge conditional in config-parser so gcov can produce coverage
data (fd.o #10887, Simon McVittie)
â€¢ List which parts of the Desktop Entry specification are applicable to
.service files (fd.o #19159, Sven Herzberg)
â€¢ Don't suppress service activation if two services have the same Exec=
(fd.o #35750, Colin Walters)
â€¢ Windows:
Â· Avoid the name ELEMENT_TYPE due to namespace-pollution from winioctl.h
(Andre Heinecke)
Â· Include _dbus_path_is_absolute in libdbus on Windows, fixing compilation
(fd.o #32805, Mark Brand)

D-Bus 1.4.6 (2010-02-17)

==

The "1, 2, miss a few, 99, 100" release.

â€¢ Remove unfinished changes intended to support GTest-based tests, which were mistakenly included in 1.4.4

D-Bus 1.4.4 (2010-02-17)

==

â€¢ Switch back to using even micro versions for stable releases; 1.4.1

should have been called 1.4.2, so skip that version number

â€¢ Don't leave bad file descriptors being watched when spawning processes,

which could result in a busy-loop (fd.o #32992, NB#200248; possibly

also LP#656134, LP#680444, LP#713157)

â€¢ Check for MSG_NOSIGNAL correctly

â€¢ Fix failure to detect abstract socket support (fd.o #29895)

â€¢ Make _dbus_system_logv actually exit with DBUS_SYSTEM_LOG_FATAL (fd.o #32262, NB#180486)

â€¢ Improve some error code paths (fd.o #29981, fd.o #32264, fd.o #32262,
fd.o #33128, fd.o #33277, fd.o #33126, NB#180486)
â€¢ Avoid possible symlink attacks in /tmp during compilation (fd.o #32854)
â€¢ Tidy up dead code (fd.o #25306, fd.o #33128, fd.o #34292, NB#180486)
â€¢ Improve gcc malloc annotations (fd.o #32710)
â€¢ If the system bus is launched via systemd, protect it from the OOM killer
â€¢ Documentation improvements (fd.o #11190)
â€¢ Avoid readdir_r, which is difficult to use correctly (fd.o #8284,
fd.o #15922, LP#241619)
â€¢ Cope with invalid files in session.d, system.d (fd.o #19186, Debian #230231)
â€¢ Don't distribute generated files that embed our builddir (fd.o #30285,
fd.o #34292)
â€¢ Raise the system bus's fd limit to be sufficient for its configuration
(fd.o #33474, LP#381063)
â€¢ Fix syslog string processing
â€¢ Ignore -Waddress
â€¢ Remove broken gcov parsing code and --enable-gcov, and replace them
with lcov HTML reports and --enable-compiler-coverage (fd.o #10887)
â€¢ Windows:
 Â· avoid live-lock in Windows CE due to unfair condition variables
â€¢ OpenBSD:
 Â· support credentials-passing (fd.o #32542)
â€¢ Solaris:
 Â· opt-in to thread safety (fd.o #33464)

D-Bus 1.4.1 (20 December 2010)

==

â€¢ Fix for CVE-2010-4352: sending messages with excessively-nested variants can
crash the bus. The existing restriction to 64-levels of nesting previously
only applied to the static type signature; now it also applies to dynamic
nesting using variants. Thanks to RÃ©mi Denis-Courmont for discovering this
issue.
â€¢ OS X portability fixes, including launchd support.
â€¢ Windows autolaunch improvements.
â€¢ Various bug fixes.

D-Bus 1.4.0 (6 Sep 2010)

==

- systemd hookup

D-Bus 1.3.1 (23 June 2010)

==

- New standardized PropertiesChanged signal in the properties interface
- Various portability fixes, in particular to Windows platforms
- Support forking bus services, for compatibility

D-Bus 1.3.0 (29 July 2009)

==

- ability for dbus-send to send to any bus (--address)
- file descriptor passing on Unix socket transports
- use of GCC atomic intrinsics for better processor support (requires -march=i486 or above for x86 compilation)
- thread-safe FD_CLOEXEC setting on recent Linux kernels (2.6.24-27 and up) and glibc (2.9 for pipe2 and 2.10 for accept4)
- feature negotiation in the bus daemon

```

\`configure' configures dbus-glib 0.100.2 to adapt to many kinds of systems.

Usage: \$0 [OPTION]... [VAR=VALUE]...

To assign environment variables (e.g., CC, CFLAGS...), specify them as VAR=VALUE. See below for descriptions of some of the useful variables.

Defaults for the options are specified in brackets.

Configuration:

-h, --help	display this help and exit
--help=short	display options specific to this package
--help=recursive	display the short help of all the included packages
-V, --version	display version information and exit
-q, --quiet, --silent	do not print '`checking ...' messages
--cache-file=FILE	cache test results in FILE [disabled]
-C, --config-cache	alias for '`--cache-file=config.cache'
-n, --no-create	do not create output files
--srcdir=DIR	find the sources in DIR [configure dir or `..']

Installation directories:

--prefix=PREFIX	install architecture-independent files in PREFIX	@<:@@S @ac_default_prefix@:>@
--exec-prefix=EPREFIX	install architecture-dependent files in EPREFIX	@<:@PREFIX@:>@

By default, '`make install' will install all the files in '`\$ac_default_prefix/bin', '`\$ac_default_prefix/lib' etc. You can specify an installation prefix other than '`\$ac_default_prefix' using '`--prefix', for instance '`--prefix=\$HOME'.

For better control, use the options below.

Fine tuning of the installation directories:

--bindir=DIR	user executables [EPREFIX/bin]
--sbindir=DIR	system admin executables [EPREFIX/sbin]
--libexecdir=DIR	program executables [EPREFIX/libexec]
--sysconfdir=DIR	read-only single-machine data [PREFIX/etc]
--sharedstatedir=DIR	modifiable architecture-independent data [PREFIX/com]
--localstatedir=DIR	modifiable single-machine data [PREFIX/var]
--libdir=DIR	object code libraries [EPREFIX/lib]
--includedir=DIR	C header files [PREFIX/include]
--oldincludedir=DIR	C header files for non-gcc [/usr/include]

```

--datarootdir=DIR          read-only arch.-independent data root
[PREFIX/share]
--datadir=DIR             read-only architecture-independent data
[DATAROOTDIR]
--infodir=DIR            info documentation [DATAROOTDIR/info]
--localedir=DIR         locale-dependent data [DATAROOTDIR/locale]
--mandir=DIR            man documentation [DATAROOTDIR/man]
--docdir=DIR            documentation root @<:@DATAROOTDIR/doc/dbus-
glib@:>@
--htmldir=DIR           html documentation [DOCDIR]
--dvidir=DIR            dvi documentation [DOCDIR]
--pdfdir=DIR            pdf documentation [DOCDIR]
--psdir=DIR             ps documentation [DOCDIR]
_ACEOF

```

```
cat <<\_ACEOF
```

Program names:

```

--program-prefix=PREFIX      prepend PREFIX to installed
program names
--program-suffix=SUFFIX     append SUFFIX to installed
program names
--program-transform-name=PROGRAM  run sed PROGRAM on installed
program names

```

System types:

```

--build=BUILD          configure for building on BUILD [guessed]
--host=HOST            cross-compile to build programs to run on HOST
[BUILD]
_ACEOF
fi

```

```

if test -n "$ac_init_help"; then
  case $ac_init_help in
    short | recursive ) echo "Configuration of dbus-glib 0.100.2:";;
    esac
  cat <<\_ACEOF

```

Optional Features:

```

--disable-option-checking  ignore unrecognized --enable/--with
options
--disable-FEATURE         do not include FEATURE (same as --enable-
FEATURE=no)
--enable-FEATURE[=ARG]   include FEATURE [ARG=yes]
--enable-maintainer-mode
                           enable make rules and dependencies not
useful (and
                           sometimes confusing) to the casual installer
--enable-silent-rules     less verbose build output (undo: "make V=1")
--disable-silent-rules    verbose build output (undo: "make V=0")
--enable-dependency-tracking
                           do not reject slow dependency extractors

```

```

--disable-dependency-tracking
                                speeds up one-time build
--enable-tests                    enable unit test code
--enable-ansi                    enable -ansi -pedantic gcc flags
--enable-verbose-mode            support verbose debug mode
--enable-asserts                 include assertion checks
--enable-checks                  include sanity checks on public API
--enable-gcov                    compile with coverage profiling
instrumentation (gcc
                                only)
--enable-bash-completion         install bash completion scripts
--enable-shared@<:@=PKGS@:>@    build shared libraries
@<:@default=yes@:>@
--enable-static@<:@=PKGS@:>@    build static libraries
@<:@default=yes@:>@
--enable-fast-install@<:@=PKGS@:>@
                                optimize for fast installation
@<:@default=yes@:>@
--disable-libtool-lock          avoid locking (might break parallel builds)
--enable-gtk-doc                 use gtk-doc to build documentation
@<:@@<:@default=no@:>@@@:>@
--enable-gtk-doc-html           build documentation in html format
@<:@@<:@default=yes@:>@@@:>@
--enable-gtk-doc-pdf            build documentation in pdf format
@<:@@<:@default=no@:>@@@:>@

Optional Packages:
--with-PACKAGE[=ARG]            use PACKAGE [ARG=yes]
--without-PACKAGE                do not use PACKAGE (same as --with-
PACKAGE=no)
--with-test-socket-dir=dirname
                                Where to put sockets for make check
--with-introspect-xml=filename
                                Pass in a pregenerated dbus daemon
introspection xml
                                file (as generated by 'dbus-daemon --
introspect') to
                                use instead of querying the installed dbus
daemon
--with-dbus-binding-tool=filename
                                Use external dbus-binding-tool program
--with-pic@<:@=PKGS@:>@         try to use only PIC/non-PIC objects
@<:@default=use
                                both@:>@
--with-gnu-ld                    assume the C compiler uses GNU ld
@<:@default=no@:>@
--with-libtool-sysroot=DIR      Search for dependent libraries within DIR
                                (or the compiler's sysroot if not specified).
--with-html-dir=PATH            path to installed docs

```

Some influential environment variables:

```

CC          C compiler command
CFLAGS      C compiler flags
LDFLAGS     linker flags, e.g. -L<lib dir> if you have libraries in
a
            nonstandard directory <lib dir>
LIBS        libraries to pass to the linker, e.g. -l<library>
CPPFLAGS    (Objective) C/C++ preprocessor flags, e.g. -I<include
dir> if
            you have headers in a nonstandard directory <include
dir>
CPP         C preprocessor
PKG_CONFIG  path to pkg-config utility
PKG_CONFIG_PATH
            directories to add to pkg-config's search path
PKG_CONFIG_LIBDIR
            path overriding pkg-config's built-in search path
DBUS_CFLAGS C compiler flags for DBUS, overriding pkg-config
DBUS_LIBS   linker flags for DBUS, overriding pkg-config
DBUS_GLIB_CFLAGS
            C compiler flags for DBUS_GLIB, overriding pkg-config
DBUS_GLIB_LIBS
            linker flags for DBUS_GLIB, overriding pkg-config
DBUS_GLIB_THREADS_CFLAGS
            C compiler flags for DBUS_GLIB_THREADS, overriding pkg-
config
DBUS_GLIB_THREADS_LIBS
            linker flags for DBUS_GLIB_THREADS, overriding pkg-
config
GTKDOC_DEPS_CFLAGS
            C compiler flags for GTKDOC_DEPS, overriding pkg-config
GTKDOC_DEPS_LIBS
            linker flags for GTKDOC_DEPS, overriding pkg-config

```

Use these variables to override the choices made by `configure' or to help it to find libraries and programs with nonstandard names/locations.

Report bugs to

https://bugs.freedesktop.org/enter_bug.cgi?product=dbus&component=GLib.

# Report the --help message.
#
if test "$ac_init_help" = "long"; then

```

```
# Omit some internal or obsolete options to make the list less
imposing.
# This message is too long to be a string in the A/UX 3.1 sh.
cat <<_ACEOF
\`configure' configures dbus 1.6.8 to adapt to many kinds of systems.
```

Usage: \$0 [OPTION]... [VAR=VALUE]...

To assign environment variables (e.g., CC, CFLAGS...), specify them as VAR=VALUE. See below for descriptions of some of the useful variables.

Defaults for the options are specified in brackets.

Configuration:

```
-h, --help                display this help and exit
  --help=short            display options specific to this package
  --help=recursive        display the short help of all the included
packages
-V, --version             display version information and exit
-q, --quiet, --silent    do not print \`checking ...' messages
  --cache-file=FILE      cache test results in FILE [disabled]
-C, --config-cache       alias for \`--cache-file=config.cache'
-n, --no-create           do not create output files
  --srcdir=DIR            find the sources in DIR [configure dir or
\`..']
```

Installation directories:

```
--prefix=PREFIX          install architecture-independent files in
PREFIX
                           @<:@@S|@ac_default_prefix@:>@
--exec-prefix=EPREFIX    install architecture-dependent files in
EPREFIX
                           @<:@PREFIX@:>@
```

By default, \`make install' will install all the files in \`\${ac_default_prefix}/bin', \`\${ac_default_prefix}/lib' etc. You can specify an installation prefix other than \`\${ac_default_prefix}' using \`--prefix', for instance \`--prefix=\$HOME'.

For better control, use the options below.

Fine tuning of the installation directories:

```
--bindir=DIR             user executables [EPREFIX/bin]
--sbindir=DIR            system admin executables [EPREFIX/sbin]
--libexecdir=DIR         program executables [EPREFIX/libexec]
--sysconfdir=DIR         read-only single-machine data [PREFIX/etc]
--sharedstatedir=DIR     modifiable architecture-independent data
[PREFIX/com]
--localstatedir=DIR      modifiable single-machine data [PREFIX/var]
```

```

--libdir=DIR          object code libraries [EPREFIX/lib]
--includedir=DIR     C header files [PREFIX/include]
--oldincludedir=DIR  C header files for non-gcc [/usr/include]
--datarootdir=DIR    read-only arch.-independent data root
[PREFIX/share]
--datadir=DIR        read-only architecture-independent data
[DATAROOTDIR]
--infodir=DIR        info documentation [DATAROOTDIR/info]
--localedir=DIR      locale-dependent data [DATAROOTDIR/locale]
--mandir=DIR         man documentation [DATAROOTDIR/man]
--docdir=DIR         documentation root
@<:@DATAROOTDIR/doc/dbus@:>@
--htmldir=DIR        html documentation [DOCDIR]
--dvidir=DIR         dvi documentation [DOCDIR]
--pdfdir=DIR         pdf documentation [DOCDIR]
--psdir=DIR          ps documentation [DOCDIR]
_ACEOF

```

```
cat <<\_ACEOF
```

Program names:

```

--program-prefix=PREFIX      prepend PREFIX to installed
program names
--program-suffix=SUFFIX      append SUFFIX to installed
program names
--program-transform-name=PROGRAM  run sed PROGRAM on installed
program names

```

X features:

```

--x-includes=DIR    X include files are in DIR
--x-libraries=DIR   X library files are in DIR

```

System types:

```

--build=BUILD      configure for building on BUILD [guessed]
--host=HOST        cross-compile to build programs to run on HOST
[BUILD]

```

```
_ACEOF
```

```
fi
```

```

Optional Features:

```

--disable-option-checking  ignore unrecognized --enable/--with
options
--disable-FEATURE          do not include FEATURE (same as --enable-
FEATURE=no)
--enable-FEATURE[=ARG]    include FEATURE [ARG=yes]
--disable-maintainer-mode

```

```

useful (and
    disable make rules and dependencies not
    sometimes confusing) to the casual installer
--enable-silent-rules    less verbose build output (undo: "make V=1")
--disable-silent-rules  verbose build output (undo: "make V=0")
--enable-dependency-tracking
                        do not reject slow dependency extractors
--disable-dependency-tracking
                        speeds up one-time build
--enable-shared@<:@=PKGS@:>@  build shared libraries
@<:@default=yes@:>@
--enable-static@<:@=PKGS@:>@  build static libraries
@<:@default=yes@:>@
--enable-fast-install@<:@=PKGS@:>@
                        optimize for fast installation
@<:@default=yes@:>@
--disable-libtool-lock  avoid locking (might break parallel builds)
--enable-compiler-coverage
                        Enable generation of coverage data
--disable-compiler-optimisations
                        Disable compiler optimisations
--enable-developer      set defaults to be appropriate for a D-Bus
developer
                        instead of a distribution/end-user
--enable-ansi           enable -ansi -pedantic gcc flags
--enable-verbose-mode   support verbose debug mode
--enable-asserts       include assertion checks
--enable-checks        include sanity checks on public API
--enable-xml-docs      build XML documentation (requires xmlto)
--enable-doxygen-docs  build DOXYGEN documentation (requires
Doxygen)
--enable-abstract-sockets
                        use abstract socket namespace (linux only)
--enable-selinux       build with SELinux support
--enable-libaudit      build audit daemon support for SELinux
--enable-dnotify       build with dnotify support (linux only)
--enable-inotify       build with inotify support (linux only)
--enable-kqueue        build with kqueue support
--enable-console-owner-file
                        enable console owner file
--enable-userdb-cache  build with userdb-cache support
--enable-launchd       build with launchd auto-launch support
--enable-systemd       build with systemd at_console support
--enable-embedded-tests
binaries
enable unit test code in the library and
--enable-modular-tests
enable modular regression tests (requires
GLib)
--enable-tests        enable/disable all tests, overriding
embedded-tests/modular-tests
--enable-installed-tests
binaries
enable unit test code in the library and

```

```

--enable-epoll          use epoll(4) on Linux
--enable-x11-autolaunch build with X11 auto-launch support
--disable-Werror       compile without -Werror (normally enabled in
                        development builds)
--enable-stats         enable bus daemon usage statistics

Optional Packages:
--with-PACKAGE[=ARG]   use PACKAGE [ARG=yes]
--without-PACKAGE      do not use PACKAGE (same as --with-
PACKAGE=no)
--with-pic@<:@=PKGS@:>@    try to use only PIC/non-PIC objects
@<:@default=use
                        both@:>@
--with-gnu-ld          assume the C compiler uses GNU ld
@<:@default=no@:>@
--with-libtool-sysroot=DIR Search for dependent libraries within DIR
                        (or the compiler's sysroot if not specified).
--with-xml=libxml/expat XML library to use (libxml may be named
libxml2 on
                        some systems)
--with-init-scripts=redhat
                        Style of init scripts to install
--with-session-socket-dir=dirname
                        Where to put sockets for the per-login-
session
                        message bus
--with-test-socket-dir=dirname
                        Where to put sockets for make check
--with-system-pid-file=pidfile
                        PID file for systemwide daemon
--with-system-socket=filename
                        UNIX domain socket for systemwide daemon
--with-console-auth-dir=dirname
                        directory to check for console ownership
--with-console-owner-file=filename
                        file whose owner determines current console
owner
--with-launchd-agent-dir=dirname
                        directory to put the launchd agent (default:
                        /Library/LaunchAgents)
--with-dbus-user=<user> User for running the DBUS daemon
(messagebus)
--with-dbus-daemon-dir=dirname
                        Directory for installing the DBUS daemon
--with-dbus-session-bus-default-address=nonce-
tcp:/autolaunch:/tcp:host:port
                        Transport Type to be used (default: nonce-
tcp:)
--without-64-bit       If you have to use this option, please
report it as
                        a bug

```

```

--with-valgrind      Add instrumentation to help valgrind to
understand
                    our allocator
--with-x             use the X Window System
--with-systemdsystemunitdir=DIR
                    Directory for systemd service files
--with-dbus-test-dir=dirname
                    path where the tests tools are available

```

Some influential environment variables:

```

CC                  C compiler command
CFLAGS              C compiler flags
LDFLAGS             linker flags, e.g. -L<lib dir> if you have libraries in
a
                    nonstandard directory <lib dir>
LIBS                libraries to pass to the linker, e.g. -l<library>
CPPFLAGS            (Objective) C/C++ preprocessor flags, e.g. -I<include
dir> if
                    you have headers in a nonstandard directory <include
dir>
CXX                 C++ compiler command
CXXFLAGS            C++ compiler flags
CPP                 C preprocessor
CXXCPP              C++ preprocessor
PKG_CONFIG           path to pkg-config utility
GLIB_CFLAGS         C compiler flags for GLIB, overriding pkg-config
GLIB_LIBS           linker flags for GLIB, overriding pkg-config
DBUS_GLIB_CFLAGS    C compiler flags for DBUS_GLIB, overriding pkg-config
DBUS_GLIB_LIBS     linker flags for DBUS_GLIB, overriding pkg-config
PYTHON              the Python interpreter
LIBXML_CFLAGS       C compiler flags for LIBXML, overriding pkg-config
LIBXML_LIBS         linker flags for LIBXML, overriding pkg-config
SYSTEMD_CFLAGS      C compiler flags for SYSTEMD, overriding pkg-config
SYSTEMD_LIBS        linker flags for SYSTEMD, overriding pkg-config
VALGRIND_CFLAGS     C compiler flags for VALGRIND, overriding pkg-config
VALGRIND_LIBS       linker flags for VALGRIND, overriding pkg-config
MAN2HTML            Path to man2html (optional)

```

Use these variables to override the choices made by `configure' or to help it to find libraries and programs with nonstandard names/locations.

Report bugs to

<https://bugs.freedesktop.org/enter_bug.cgi?product=dbus>.

# include_expsyms should be a list of space-separated symbols to be
*always*
# included in the symbol list
include_expsyms=
# exclude_expsyms can be an extended regexp of symbols to exclude
# it will be wrapped by ` (' and `)'$', so one must not match
beginning or
# end of line. Example: `a|bc|.*d.*' will exclude the symbols `a'
and `bc',
# as well as any symbol that contains `d'.
exclude_expsyms='_GLOBAL_OFFSET_TABLE_|_GLOBAL__F[ID]_.*'
# Although _GLOBAL_OFFSET_TABLE_ is a valid symbol C name, most
a.out
# platforms (ab)use it in PIC code, but their linkers get confused
if
# the symbol is explicitly referenced. Since portable code cannot
# rely on this symbol name, it's probably fine to never include it
in
# preloaded symbol tables.
# Exclude shared library initialization/finalization symbols.
